When it was organized in June 1951, American Friends of the Middle East took full-page ads in the New York Times and the New York Herald Tribune to proclaim its objectives. They were of the very highest: to thwart Communist aggression in the Middle East and to strengthen the bonds of "culture and religion, of literature and education," between Americans and the Middle Eastern peoples. Whatever information it disseminated on the Middle East was to be objectively presented.

Founder of AFME is the noted journalist Dorothy Thompson—later its president—and the roster of charter members include Dr. Garland Evans Hopkins—later executive vice president—Dr. Phillip Hitti of Princeton, and Dr. Millar Burrows, author of Palestine Is Our Business. Thus, with a welter of vague and fairly expensive verbiage, this "committee to increase appreciation of common spiritual values" was started.

AFME has since carried on a wide variety of activities: pamphleteering; issuing a newsletter, clipsheets and news releases; organizing group discussions; presenting TV shows; producing films; operating a lecture bureau and a travel bureau; providing travel funds to and from the Arab countries; awarding scholarships and prizes, and promoting numerous student activities, art shows and social functions.

But in doing all this, the purported aim of AFME to tear away "the curtain of obscurity and distortion" about the Middle East gets lost in its own partisanship. For AFME has been insistently pro-Arab and anti-Israel.

If, contrary to its spiritual and humanitarian claims, AFME were admittedly a pro-Arab propaganda organization, admittedly an apologist for Arab deeds and misdeeds and a supporter of Arab nationalist claims against Israel, and admittedly an opponent of the right of European governments to be in Moslem countries, it would be perfectly within its rights. There is nothing improper in special pleading or in appealing for American public sympathy and support. The opportunity to promote causes is a part of our democratic process. But by the same token, the American people are entitled to know what the real aim is, what real interests are being represented, and who puts up the money.

Actually, AFME is a propaganda organization for the Arabs and Moslems, doing a job along modern public relations lines that for years the Arabs had demonstrated they were unable to do for themselves.

The membership, the financing and the character of its contentions reflect AFME's narrow partisan nature. In its almost 5 years of existence the group has actually enrolled only about 2,000 members; their combined dues would hardly defray operational costs. Since the general membership contributes only a small part of the organization's funds and since it has little to say about policy, it is misleading to assert that the agency has a grassroots base. The real strength of AFME is in its budget of approximately $500,000 a year, mostly from a few oil companies with interests in the Arab countries and from the Dearborn Foundation of Chicago.

Whether AFME is an unbiased educational and cultural organization or a propaganda outfit can best be determined by its own statements. Does it present both sides of an issue fairly?

A content analysis of published materials issued by AFME in a 7-month period in 1953, was made recently by a University of Chicago graduate student. He found that roughly two-thirds was clearly pro-Arab propaganda; one-fourth was definitely anti-Israel. The plight of the Arab refugees received most attention. The anti-Israel items dwelt on alleged Israeli indifference toward Arab refugees, aggressive territorial ambitions, atrocities, and the like. A rare favorable comment about Israel was usually the preface to a much larger criticism.

In a letter to the New York Times, published July 29, 1951, Miss Thompson demurred that her group was "not directed against Israel * * *." It was, she said, merely "determined to try to see to it that the problems and achievements of the other Middle Eastern States are not totally ignored."

In the light of AFME's original statements stressing the vast importance of the Middle East to Americans, the newly defined aim of publicizing "ignored" countries meant that Miss Thompson's earlier press release, which insisted that "we are not a propaganda organization, and we are not out to grind axes for anyone," was not as accurate as it might have been. While claiming impartiality, Miss Thompson has justified AFME's exclusive concern for the Arabs by explaining: "I consider it one of the principal tasks of AFME at this time to help in breaking down the tendency on the part of the American press and radio either to disregard everything friendly to the Arabs, or to print only distorted and even untrue statements about them."

On August 20, 1951, Miss Thompson sent a letter to AFME members charging the American press and radio with an anti-Arab bias. She also enclosed a copy of a letter written by novelist and biographer Vincent Sheean, a charter member of AFME. If Miss Thompson's cause was to inform the public about the Middle East, she was indeed reticent about publicizing what Mr. Sheean had to say on the subject. "I believe you will agree with me," she wrote, "that it would be unwise for us to give (Mr. Sheean's letter) to the press."

The Sheean letter was addressed to the minority leader of the House of Representatives, JOSEPH W. MARTIN. It opposed a pending bill to grant economic aid to Israel. The letter also reproved Mr. MARTIN for his praise of Israel's Army as a possible addition to democracy's arsenal. For one thing, Sheean asserted, Israel has "one of the most active Communist organizations in the Middle East." The important thing, though, was that "rightly or wrongly, the Arab States are * * * convinced that the Israeli Army is designed as the instrument of an expansionist policy, with boundless ambitions."

The "cultural" value of AFME is appreciated in the proper quarters. Omar Haliq, an Arab league representative in the United States, acknowledged in a memo to Cairo on September 30, 1951, that the organization and its founder had been giving the Arab league invaluable aid.

In April 1952, Miss Thompson and Dr. Hopkins visited the Middle East. There, they learned that Abdul Rahman Azzam Pasha, a founder of the Arab league, had expressed his approval of AFME's objectives. And the Syrian Government awarded Miss Thompson its medal of honor for defending the Arab cause in the United States.

AFME's first annual conference in New York was timed to coincide with the beginning of the Eisenhower term in January 1953. Its lecture bureau began functioning at about the same time, booking both American speakers and visiting Arabs. Typical of what audiences heard were the statements made by a Jordan lawyer, Anwar Nashashibi, on his tour. Communism in the Middle East, said Nashashibi blandly, "is directed by Red underground movements in the Arab States and the legal Communist Party in Israel."

At the conference, representatives of 30 organizations and an audience of about 200 heard a panel of speakers that included ambassadors and U. N. delegates from Arab countries. The theme of the 2-day meeting was "Partnership in Meeting Needs of the Middle East." Evidently Israel was considered, at best, a silent partner.

The speakers, to be sure, demonstrated an impressive unanimity of opinion. On one question, however, Dr. Charles Malik, Lebanon's U. N. delegate, seemed strangely at variance with the Syrian speaker, Farid Zeineddine. The Lebanese diplomat exhorted "Americans who trace their origin to Lebanon and Syria" and who "take an active interest in our destiny and development" to "deepen and develop their activity" in their many organizations. But Zeineddine attacked Zionists as members of "a movement which develops loyalty to Israel, destroying loyalty to the individual's own country."

Perhaps what seems like a disagreement here can be explained by the premise that, to the Arab world, dual loyalty works on a double standard. One wonders what Dorothy Thompson, who in December 1951 told the Jewish Graduate Society at Columbia University that being a Zionist impaired a Jew's relations with his fellow Americans, felt about Dr. Malik's speech.

In any case Miss Thompson appeared to be well satisfied with the results of AFME's first conference. She summarized its orientation in one of her regular news columns. She wrote: "the consensus expressed was * * * that the favoritism showed by America to Israel is disastrous to American influence and even to the improvement of Israel-Arab relations."

But all of AFME was not as content as it might have been. Two of its board members resigned because AFME was not pro-Arab enough. Dr. Hopkins explained that as executive vice president he was in the position of a middle-of-the-road conciliator.

If Dr. Hopkins is indeed at the center of AFME's opinion range, what are the extremists like?

Garland Evans Hopkins is a man who privately argues that his major aim as head of the American Friends of the Middle East is to bring peace and understanding between the Arab nations and Israel. Perhaps so. But if that is his purpose, he wastes precious time trying to bring Dr. Ezzat Tannous

around to the same constructive view. Dr. Tannous, director of the Palestine Arab refugee office in New York, is the diplomat who asserts that "the outside world must keep in mind that the Arabs refuse to accept the principle that the Zionists have any territorial claim in Palestine."

What rapport is possible between the two opposing forces if the Arabs insist, as Dr. Tannous claims they do, that the price of peace with Israel is its self-liquidation?

A peacemaker would not contend, as Hopkins does, that the United Press and Associated Press are two wire services which refuse out of fear to tell the truth about the Middle East. Nor would he refer to the New York Times as "a Zionist newspaper." These are the words of a disputant, nor an impartial conciliator. But they are Hopkins' words.

Blinking the obvious implications, Hopkins, too, is the Middle East expert who, speaking to several luncheon guests in February 1953, supported the Arab threat that "unless the United States goes along with Arab wishes, the Arabs will turn Communist." It was at this same luncheon that Hopkins said in effect that Jews could not rely on the American people's sense of justice and fair play in the event of a war in the Middle East brought on by "Israel's intransigence." In such event, he said, perhaps unintentionally making it sound more like something other than fear, there would be a wave of unprecedented anti-Semitism in the United States, with probable excesses.

But when an Armenian newspaper correspondent sent a dispatch back home indicating that some Arab embassies in the United States were dubious about supporting AFME because the organization favored an Arab-Israel accord, Dr. Hopkins rushed off to the embassies to quash the idea.

Substantial contributions, reportedly from American oil companies and wealthy individuals sympathetic to its aims, keep AFME well financed. The AFME tourist program has glowed proudly over the excellent liaisons it has established with middle eastern consulates. AFME's Phoenix Lecture Bureau sends its cultural envoys to all parts of the country. Lectures, conferences, and essay contests featuring Middle Eastern tours as prizes have attracted American college students to the Arab line. AFME has opened several regional offices in this country as well as middle eastern branches with representatives in several Arab cities.

You can find a striking similarity in the propaganda material of the Arabs and of AFME. While AFME does not go in for violent name-calling as the Arabs do, there is always a polite deprecation of everything connected with Israel. AFME never touches on subjects which the Arab governments and the Arab League shy away from: Notably, recognition of Israel, restortation of normal business relations, mutual development of waterways, and the like. In the numerous AFME publications there is also a notable absence of sympathy for the impoverished farm tenants and others working under intolerable conditions in Arab countries. Mention of arbitrary domination by Arab petty kings and dictators is, of course, taboo in AFME literature.

In December 1954, Dorothy Thompson, speaking at an AFME meeting in Washington, said that Israel's evolution "was not compatible with what was humane or even democratic." Though she herself had once been Zionist because she "was touched by the tragedies which befell European Jewry under the Nazis," a visit to Israel years later had convinced her that she had been "misled on basic assumptions."

But who is misleading whom? AFME, with its respectable humanitarian front and the respectable names on its board—including the Rev. Dr. Edward L. R. Elson, pastor of President Eisenhower's Washington church—is succeeding in a propaganda field where more blatant organizations like the old Arab Office and the Institute of Arab-American Affairs had failed.

Further Foreign Aid Appropriations Opposed by Illinois Manufacturers' Association

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a statement by the international trade committee of the Illinois Manufacturers' Association which was approved by the board of directors of that organization on February 10. The directors of the association do not believe that the friendship of foreign countries can be secured and retained by undertaking to outbid the insincere and unreliable promises of the Communists.

The statement follows:

FOREIGN AID STATEMENT OF INTERNATIONAL TRADE COMMITTEE APPROVED BY BOARD OF DIRECTORS, ILLINOIS MANUFACTURERS' ASSOCIATION, CHICAGO, FEBRUARY 10, 1956

The state of the Union message of the President again proposes the continuation of foreign aid and requests congressional authority to make foreign economic aid commitments for a period longer than 1 year. According to press reports Congress will be asked for $4.9 billion in additional aid funds. The new requests for aid are designed to meet the shift in Soviet tactics and their offer of aid to Asiatic and Middle Eastern nations.

Although European nations have attained their highest production levels, it is reported that they are seeking more aid from the United States and preparing plans for new long-term projects.

During the past 10 years the United States provided more than $51 billion in foreign aid. The effectiveness of these huge handouts have been questioned by Government representatives and by our business leaders.

The committee of 55 businessmen sent abroad by the Mutual Security Agency in February of 1953 found tremendous waste and duplication in the administration of the program—too many people doing too many things. The committee recommended that further financial aid be reduced substantially for the next year and discontinued by June 1954; and that the use of foreign-aid funds be limited to direct military aid.

The citizens advisory committee to the Committee on Banking and Currency of the United States Senate, in submitting its report to the United States Senate, made the following recommendations:

"The unprecedented use of outright governmental grants as a financing device in the postwar period is a result of the emergency situations created by recent wars.

"The use of such grants as a long-run solution to the problem of financing trade is completely inconsistent both with the economic philosophy and with the welfare of this Nation.

"This committee believes that the need for economic-grants-in-aid as a financing device no longer exists. It recommends therefore that no further appropriations for such grants be made. Any grants made for humanitarian purposes, such as disaster relief, abroad, or for political or military purposes, should explicitly be defined as such."

Since the inception of the foreign-aid program in 1948, the Illinois Manufacturers' Association questioned the need for such huge aid and our ability to furnish same. The association held:

That continued dissipation of American assets and the continued expenditure of huge sums for foreign giveaway plans impose unwarranted additional tax burdens upon the citizens of this country at a time when they are already overwhelmed with taxation.

That the alarming expansion of our national debt, which is resulting in part from the continuation of the elaborate foreign aid programs, is placing a stupendous burden upon our future generations.

That the continued conformity to vague and academic plans to distribute our wealth among all of the people of the world will eventually undermine the economic stability of this country.

A group of representative Illinois industrialists, who participated in an extensive trade tour of Europe under the sponsorship of the IMA in 1954, in their report to the board of directors of the association, recommended:

That we should stop dissipating the American taxpayers' funds on impractical and costly give-away programs, most of which are not needed or desired by the people of Europe.

That our European economic-aid programs, with the exception of the program in Spain, be discontinued and the Foreign Operations Administration liquidated.

That economic aid already committed be administered by our State Department.

That military aid necessary to safeguard the security of the United States be administered by our Defense Department.

That all programs for European economic and military aid be closely supervised by a special congressional committee established for that purpose.

That we should cooperate in every appropriate manenr in encouraging international trade policies which substitute trade for aid.

The board of directors of the Illinois Manufacturers' Association reaffirms its opposition to the perpetuation and extension of foreign economic-aid programs. The directors of the association do not believe that the friendship of foreign countries can be secured and retained by undertaking to outbid the insincere and unreliable promises of the Communists. The directors submit that our foreign policy should be based upon the achievement of our own objectives. The directors of the IMA also submit that any necessary military aid, which may be authorized by Congress, should be limited to short-time commitments.

Giveraway

EXTENSION OF REMARKS
OF
HON. HARRIS ELLSWORTH
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks and include a newspaper article, I present a letter which was printed recently in the Washington Post and Times Herald. The writer of the letter, Dr. David B. Charlton, is a distinguished citizen of Portland, Oreg. He is a noted naturalist and an ardent conservationist. The letter re-

ferred to, together with a footnote by the editor of the newspaper, follows:

GIVERAWAY

A little campaign is on now to discredit the record of former Congressman Wesley D'Ewart in the hope that his appointment as Assistant Secretary of the Interior will not be confirmed.

It is true that the organized conservation groups were opposed to the so-called stockmen's bill, which was introduced by Mr. D'Ewart. However, those who know and have worked with him recognize his intellectual honesty, knowledge of forestry and public land matters, and fairness in dealing with controversial legislation. I wish the same could be said of his most vocal critics.

It appears that your own opinions have been influenced by some of the misrepresentation going the rounds these days. For example, in your editorial of October 14, 1955, entitled "Giveraway," you refer to Mr. D'Ewart as being floor manager for a bill introduced by Representative ELLSWORTH "which would have permitted private timber operators to carry their logging into public parks."

Now, of course, that is an outright misstatement of fact, for the bill specifically excludes parks in the proposed timberland exchanges. I suggest you read H. R. 4646 of the 83d Congress, which is the bill referred to, along with its supplementary report. The bill was incorrectly represented in 1954 for political purposes and is being dug up now for the same reasons.

It is unfortunate that the true intent of the bill and the problem it was designed to meet were not explained to the rank and file conservationists who were urged to defeat it by their leaders and by certain politicians. A difference of opinion is one thing, but false representation is quite another.

DAVID B. CHARLTON, Ph. D.
PORTLAND, OREG.

EDITOR'S NOTE.—It is a fact that in a supplemental report issued 6 months after its original report on H. R. 4646, and after the bill had been denounced on the House floor, the Committee on Interior and Insular Affairs approved an amendment specifically excluding parks from the proposed timberland exchanges. The editorial should therefore, have referred not to public parks but to national forests.

Important Vote Coming

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1956

Mr. DAWSON of Utah. Mr. Speaker, another of the Nation's great newspapers—the Washington Evening Star—has seen through the smog of distortion put out by southern California spokesmen. Yesterday, February 26, 1956, this newspaper carried an editorial in favor of passage of the upper Colorado River storage project.

The editorial follows:

IMPORTANT VOTE COMING

The upper Colorado River storage project has been cleared for debate and an early vote in the House this week. Indications are that the vote will be close. Despite the removal from the measure of the controversial Echo Park dam project, and the absence of any public versus private power issue, opposition of the lower basin States led by California continues, while many Eastern and Midwestern lawmakers are reported dubious as to the justification for the relatively large expenditure involved.

The House bill, as presently constituted, would authorize a series of dams and storage reservoirs at strategic points along the rivers of the upper Colorado Basin. The chief immediate purpose of the project is the control of the immensely valuable waters of the great inland drainage area to permit regulation of the rivers' flow, now highly variable and, in many years, largely wasted.

President Eisenhower and congressional leaders of both parties have urged approval of the project as a needed contribution to the national interest. The value of a dependable source of water and power in the four-State area—Colorado, New Mexico, Utah, and Wyoming—has been greatly increased in recent years as a result of the important discoveries in strategic minerals, notably uranium, in the region.

Now that any possible threat to national parks and monuments has been averted by the elimination of Echo Park dam site and inclusion of definite safeguards for the Rainbow Bridge National Monument, the national interest in general and the needs of the great intermountain empire in particular call for approval of this legislation. We hope that sectional interests in California and disinterest on the eastern seaboard will not combine to defeat a measure of such great importance to the future of the entire Nation.

Battle for Freedom

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1956

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks, I am inserting in the CONGRESSIONAL RECORD a copy of the speech delivered by Adm. Arthur Radford, Chairman of the Joint Chiefs of Staff, at the Freedoms Foundation awards presentation, Valley Forge, Pa., February 22, 1956.

The speech follows:

BATTLE FOR FREEDOM

Here at Valley Forge, at the historic winter refuge of General Washington's struggling Army, we have gathered to warm our hearts and minds to our great task—the battle for freedom. We are here to present citations and awards to selected individuals and organizations for their outstanding contributions in the cause of freedom.

In so doing, we achieve a corollary purpose. We reaffirm the ideals and principles which made this country great; and by this reaffirmation, we rededicate our lives and our spirits to the furtherance of our national security.

Now, it could be presumptive for me to try to tell you distinguished award winners about freedom. By these awards you are about to receive, you have proven your own great understanding and belief.

Therefore, rather than describe what freedom is, the thought occurred to me that I would do better to discuss with you from my experience, some of the things we must do to win today's battle for freedom.

In large measure, the actions we must take are first individual. Then we must take our individual actions and band them together so that individual actions become collective, and together they become part and parcel to our national strength.

Let me say this: It is not enough for only a relatively few to strive and work for the defense of freedom. It never will be.

Freedom is not a one-way street. It is not merely a God-given right and privilege. We cannot speak of it with our lips, and then deny it with our lives.

Freedom is our heritage. As such, it constitutes an irreplaceable asset. Like any possession of value, it must be protected; and it must be made secure for generations to follow.

Individually, every American citizen should both expect and want to guard our country and our way of life. Collectively, Americans everywhere must be united in conscientious action against any threat to our liberty.

For every freedom, there is a corresponding responsibility. There is something for each of us to do. Let each one look for, find, and do that duty.

Unfortunately, the long-term continuance of our society is too often taken for granted. Liberty is too often regarded as a gift rather than a reward for effort.

When liberty is taken for granted and regarded as a gift, apathy and complacency creep into our lives. Unconsciously our guard is lowered.

To me, it seems obvious that we should never take our freedom for granted. Let me tell you why.

Freedom is not free. History is replete with instances to prove that nations who take their liberty for granted are apt to fall prey to tyrannical forces, from within as well as without.

Right now, strong forces in the world oppose and threaten our American ideals. Ruthless men still maintain power through force, and would extend their power through any means, even conquest, if they could. Those forces constitute a form of evil as tyrannical in its concepts as any ever known.

That evil is international communism. Constant struggle is its keynote, and its struggle is worldwide. At issue is the true nature of man himself.

Now, the Communists have made amazing gains largely because they have been so everlastingly willing to pursue by any stratagem their objectives and beliefs.

On the other hand, we who are free have many times been inarticulate and overcomplacent. We have lacked the urgency, the verbal ability or the desire to explain and exemplify adequately our way of life.

In fact, right now, I have the feeling that we Americans are not doing enough to explain or defend publicly before the world the fundamentals of freedom.

It is evident we are not doing enough to convince others of the basic responsibilities which underlie our collective security arrangements with our friends overseas. We are not doing enough to convince others that the path of freedom is the best path for the welfare of all peoples—that it is truly worthy of personal sacrifices.

Today, the drums of Communist hate roll out alternating choruses of harsh invectives and soothing lullabies.

In my role as Chairman of the Joint Chiefs of Staff, I must listen to those drums and not be misled by their attempts to confuse us. I believe Communists desist from aggression only so long as free peoples are ready, able, and willing to stoutly defend their liberty.

In this regard, American opposition to Communist aims must be more than military strength to resist aggression.

And so it is. The ideals and concepts of individual self-determination, which are supported by our Nation, are not only in direct opposition to the Soviet creed; but are, in themselves, a threat to that creed. Therefore, their extermination becomes a major Communist objective.

If I were a dictator, the first book I would exterminate would be the Bible. I would destroy it because I realize that our whole concept of democracy came from that Book.

In the Bible, and particularly in Jesus' spiritual concepts of God and man, all men

can find the key to victory, not only over one evil system, but in the greater crusade against all falsehood. Mankind, however, appears to come slowly to the realization that freedom is not won and held solely by material means.

It seems to me liberty is given to man like a piece of land. It is entrusted to him for faithful cultivation and safekeeping. Man can nourish it and provide it the necessary safeguards; but only if he is self-reliant enough—and if his dedication to free principles is great enough.

In this, dollars, bombs, and all the wonders of science are not enough. Nor is high office, or special political and financial success sufficient.

Then what is sufficient? There probably is no one simple answer.

Safeguarding freedom is the responsibility of every individual. It is a personal trust. It depends on the sensitive, conscientious actions of the individual. Man, or at least enough men, must be sensitive to their rights, their obligations, and their responsibilities to freedom to make it work.

First, we must know what we mean by our way of life. This you here do understand.

Second, we must be convinced that it represents the very best way of life in today's world—and I think we here are convinced.

But more than this, we must be able to explain and demonstrate this conviction to others. This then is a third task.

Fourth, we must be everlastingly willing to work for freedom, and safeguard it for our future. Part of this task is the maintenance of a strong national defense.

Fifth, we must give support to resolute peoples who want freedom and are willing to resist aggression.

Altogether, these tasks constitute a challenge for us to assume the responsibilities and duties of freemen for the advancement of freedom.

I recognize that the actions I outline are not easy tasks. In fact, we will find our freedom tasks demanding—demanding courage, humility, selflessness, service, and lots of hard work; and demanding an unshakable belief in the manner of life which we defend.

These tasks may even demand our lives. And in the final analysis, there is no greater sacrifice than for a man to lay down his life for God and country. In the end, truth, justice, and faith will win.

You award winners can take great satisfaction from all you have done to make people conscious of their individual stake in the preservation of American principles. I congratulate each of you, and I congratulate the freedoms foundation. I hope each of you will always "go onward and upward" working to further these principles.

Never think the part that you and I play as individuals is so infinitesimally small as to be of no importance. Each has his or her role to play. Each can provide faith, courage, and teamwork. The sum total can amount to a powerful force for preparedness; and it can inspire the strength and will of peoples throughout the world to live in freedom.

The Al Sarena Timber Case

EXTENSION OF REMARKS

OF

HON. HARRIS ELLSWORTH

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1956

Mr. ELLSWORTH. Mr. Speaker, considerable space in the CONGRESSIONAL RECORD has been used in recent weeks for the insertion of what appeared to be politically inspired statements regarding the patenting of some mining claims in the Rogue River watershed of Oregon, known as the Al Sarena mine. It think it appropriate that the RECORD now carry some clearly stated facts on this case by one who is well qualified to state them. Accordingly, under leave to extend my remarks in the RECORD and include material from a newspaper, there follows a letter written to the editor of the Washington Post and Times Herald by Mr. E. C. Finney, and which was printed by that newspaper February 22, 1956.

THE AL SARENA TIMBER CASE

I have noted with interest a letter regarding the Al Serena Mines case signed by Girard Davidson which was published in the Washington Post and Times Herald on February 15. Mr. Davidson relies upon his experience as Assistant Secretary of the Interior for 4 years to lend color and weight to his observations.

I, too, have had some experience in the Department of the Interior, having served in that agency of Government for 39 years, including 8 years as First Assistant Secretary and 4 years as Solicitor. Much of my experience in the lower grades dealt specifically with the examination and adjudication of mining claims. I feel that I am at least as well qualified as Mr. Davidson to comment on the matter.

Because of my past association with the Department I have attended closely the record of the hearings in the Al Sarena case and the surrounding developments with more than casual interest.

Mr. Davidson's entire letter should be given the same weight as the valuation that he put on the timber in his first paragraph; that of $500,000. Since the case was pending before the Department 18 months without decision while he was Assistant Secretary, he should know that the Forest Service valuation in the Department of the Interior record is $77,000 and that was made in 1950, 2 years after the patent application was filed.

He knows that the value of the timber has increased tremendously since the matter has become a political issue; one figure has gone as high as $600,000. An increase from $77,000 to $600,000 over a course of 5 years, if it is legitimate, should be a matter of great technical interest to silvaculturalists or timber economists.

I have also noted his statement in the third paragraph that the Interior Department denied patents under Secretary Chapman's tenure. He knows, as a former Assistant Secretary, that when any reference to a departmental decision is made it refers to a secretarial decision. He knows that the matter was an open and pending case before the Department from the time it was appealed from the Bureau of Land Management in 1951 until Mr. Davidson and Secretary Chapman went out of office and that it was still open and pending after they left office.

I have noticed in reading the press accounts of this case that those who are attacking the Al Serena decision constantly attempt to convey the impression that the matter had been decided and closed and the patents finally denied by the last administration. This was not the case and they know it.

Mr. Davidson also mentions the low price paid for the claims. He, as Assistant Secretary, should know that the price of $5 per acre is a statutory price set by Congress and that no Secretary of the Interior may change it upward or downward.

I have also noticed an attempt by those attacking the decision to convey the impression that Secretary McKay somehow or other negotiated the $5 per acre price with the mining claimants. As a matter of fact, the $5 per acre price was billed under Secretary Chapman's administration and payment was received under his administration and final certificates were issued under his administration, and the land went onto the tax rolls of Jackson County, Oreg., under that administration.

I was particularly concerned about Mr. Davidson's reference to the law of discovery. He, as a lawyer, must know that the United States Supreme Court has held that commercial production is not a requirement for the issuance of a mining patent. The rule, which was stated in *Chrisman* v. *Miller*, is that a miner should be justified in spending further time and money with the hope of developing a paying mine.

His statement that the Forest Service produced careful assays also caught my attention. The Forest Service mineral examiner in his first inspection of the premises took samples off some but not all of the claims. He took his samples to a small local firm and issued his instructions on assaying. The results showed only traces of minerals on all of the claims sampled, including claims which had produced upward of $30,000 in gold. The examiner himself said that he was highly suspicious of these assays and it prompted him to return for further sampling.

The second sampling was also only partial and they did not even bother with some of the claims which they had sampled before. They put the ore into unsealed bags and it seems they lost track of them for a few days. In other words, one cannot be sure that the samples they took were the ones which were assayed.

On the other hand, the evidence on which Under Secretary Davis relied in his final decision was based on samples taken by the Bureau of Mines itself in a very meticulous fashion, and that Bureau also checked on the qualifications of the assayer mutually selected by the claimants and the Bureau of Mines. These samples were kept in sealed bags and no one lost track of them. Solicitor Davis was clearly justified in giving them the weight of his consideration.

Mr. Davidson's statement that the Solicitor would have a choice of allowing or denying the patents when sufficient evidence of mineralization and compliance with the law was shown shows a philosophical attitude with which I cannot agree. I believe that when Congress and the Supreme Court of the land express their intent clearly it is up to the administrative officials of Government to carry them out and not to attempt legislation by administrative decision.

It was a matter of some concern to see that Mr. Davidson represented that after the decision by the Director of the Bureau of Land Management the mining claimants appealed to Secretary Douglas McKay. I believe he knows that the appeal was made to Secretary Chapman and that it remained in Secretary Chapman's office without action for 18 months and that it was in that condition when he left office.

I appreciate fully the need to protect and conserve our national forest. This protection and conservation should be done within the framework of our laws and not according to the current emotional climate.

I object to Mr. Davidson's statement that in order to issue the Al Sarena patents Mr. Davis had to circumvent the rules of the Department of the Interior. That is wholly incorrect. Mr. Davis complied with the ancient rule of the Department that justice should be done as stated in *Dawkins* v. *Hedin*. Solicitor White before him felt that the record was incomplete and that it should be supplemented.

If Mr. Davidson objects to the issuance of patents on mining claims when compliance of the law is shown, then he should object to the issuance of all mining patents issued during the last 20 years.

E. C. FINNEY.

WASHINGTON.

Tribute to America's Kindergarten Movement

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, February 27, 1956

Mr. WILEY. Mr. President, one of the proud firsts in Wisconsin has always naturally taken the deepest of pride in its founding of America's kindergarten movement.

Watertown, Wis., now celebrating the 100th anniversary of its founding, takes pride in the role played by Marguerite Schurz, wife of the famous Carl Schurz, in establishing for the first time in the New World what has been called a garden whose plants are human—a school where youngsters could take the first step into the formal learning process, while enjoying the laughter and playtime of childhood.

Since the time of Marguerite Schurz, the education movement of my own State has contributed many other significant improvements to United States education, and we hope to continue to do so.

I send to the desk the text of an article which was published in the Thursday, February 16, issue of the Milwaukee Journal, entitled "The First Kindergarten in America," and I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE FIRST KINDERGARTEN IN AMERICA—WATERTOWN, WIS., CELEBRATES THE 100TH ANNIVERSARY OF THE STARTING THERE OF INSTRUCTION FOR PRESCHOOL CHILDREN BY MRS. CARL SCHURZ, WIFE OF THE FIERY GERMAN REVOLUTIONARY

(By E. C. Kiessling)

Almost a million and a half children will attend kindergarten classes in our country this year. Yet, a century ago there were only six kindergarteners in the whole Western Hemisphere, and all of them could have been found in one small room in Watertown, Wis., where a comely young matron, Margarethe Meyer Schurz, had just opened the first kindergarten in America.

Both Watertown and Wisconsin are celebrating the centennial of that even during 1956.

One hundred years ago Watertown was the second largest city in Wisconsin, the bustling terminus of a plank road and a new railroad from Milwaukee. People and goods were pouring into the town, and, for a brief interval, it was the distributing center for western Wisconsin.

Among the newcomers was Carl Schurz, fiery German revolutionary who had made a name for himself on two continents by rescuing his favorite professor, Gottfried Kinkel, from a Berlin prison under the noses of the Prussian police.

Imbued with the ideals of freedom and democracy, Schurz had brought his bride to America and was on the lookout for a booming grassroots community where he could put his ideas into practice and at the same time cash in on rising values in real estate.

Watertown in the middle fifties seemed a sure bet to Schurz. Several of his relatives had already settled there. He had paid a high price for an 89-acre farm about a mile and a half from the center of town and divided it into building lots. On an imposing elevation overlooking the city, he began the construction of a new house, which was just about finished when his wife and their 3-year-old daughter, Agatha, arrived in August 1856.

SAT AT FEET OF KINDERGARTEN'S FATHER

Daughter of a wealthy, cultured Hamburg family, Margarethe Meyer had been only 19 at the time of her marriage in 1852. She became the mother of five children and an excellent housekeeper, in spite of a tendency to frailty. Carl paid her this compliment in a letter to a friend:

"She has worked herself so effectively into our life here, and proved herself so splendidly practical therein, that (without boasting) our house is the pleasantest to be seen far and near, and everyone of whatever nationality is at ease with us. My children thrive splendidly."

As a 16-year-old girl, she and an older sister had sat at the feet of Friedrich Froebel, father of the kindergarten. Margarethe had taken such excellent notes of his conversations with children that the master called them the best things ever written about him. They were sent to Berlin on loan, only to be lost in the mail. This misfortune has usually been ascribed to the inefficiency of the Prussian post office, but it may have been due to the efficiency of the Prussian Government, which had just passed through the revolution of 1848 and was intensely suspicious of everything new in education and politics. About that time it issued a decree outlawing kindergartens in Prussia.

The loss of the manuscript mattered little to Mrs. Schurz, however. In her pretty head, covered with brunet curls, were stored all the essential facts of the new education, as it was called. She had had practical experience, too, helping her sister establish a kindergarten in London. It was during her short sojourn there that she met and married Carl.

A SPECIAL KNACK WITH CHILDREN

In Watertown four little cousins came to visit Agatha, and it wasn't long before Frau Schurz was playing kindergarten games and singing kindergarten songs with them. Word got around that she had a special knack with preschool-age children and a system for helping them accustom themselves to life. She was only too happy to yield to the request of friends and relatives to have their children join the little group.

Since it was rather far for little folks to walk out to the Schurz farm, she looked around for a suitable room in town and found one at the corner of Jones and Second Streets. It was fitted out with a piano, chairs and other kindergarten materials, and there, one day in November or December, 1856 (the exact date is not known), half a dozen toddlers—five girls and a boy—gathered to take part in the mother songs, stories, dances, exercises with yarnballs and geometric figures, and the nature study that constituted the curriculum of the Froebelian kindergarten.

The course was conducted in German. It continued during all of that school year and the following year.

"AND GET BACK CHAIRS IN CHANGE"

Unfortunately, neither Margarethe nor Carl seem to have been quite aware of the historic significance of the first course of instruction for preschool-age children in our country. If Margarethe had only written up her own classes as fully as she did those of Froebel, what a priceless record her notes would be today; or if Carl, a prolific writer, had just once described his wife's kindergarten as vividly as he described almost everything else in the pioneer town.

From his pen we know now, during the first year of the kindergarten, farmers used to come to town with wagonloads of wheat, how they were paid in cash and how they dispersed into the stores with filled pockets to purchase goods to their heart's content, while newly arrived immigrants—the green ones—stood and gaped enviously.

From his pen we also know what happened in the next year when the short but sharp depression of 1857 brought ruin to half the merchants and made money so scarce that Carl jokingly suggested that they might soon have to buy groceries with their table and get back their chairs in change.

That depression—and the continuation of the railroad toward La Crosse, turning Watertown from a terminal into a transit town—blighted the bright hopes of the Schurzes for quick wealth. It also spelled the end of the kindergarten, for they moved to Milwaukee late in 1858 and spent only the summers in Watertown during the next 2 years. By that time Carl was already launched on the career that would make him Lincoln's minister to Spain, a Civil War general, a United States Senator, and Secretary of the Interior under President Hayes.

But Mrs. Schurz's contribution to the kindergarten was far from over when she left Watertown. In 1859 she and Agatha accompanied Carl to Boston, where he was to deliver an important speech at a Jefferson day dinner.

They stayed with a family in which there were four rather noisy children. Another visitor, Miss Elizabeth Peabody, noted that the presence of Agatha had the effect in the house of a calm coming upon the storm of young life.

Many years later Miss Peabody wrote an account of that visit and of what it meant to her.

AMERICA'S FIRST PUBLIC KINDERGARTEN

"That child of yours is a miracle," she exclaimed, "so childlike and unconscious, yet so wise and able."

"No miracle, but only brought up in a kindergarten," replied Mrs. Schurz.

"A kindergarten? What is that?"

"A garden whose plants are human. Did you ever hear of Froebel?"

By the time Mrs. Schurz had told her all about Froebel, Elizabeth Peabody had become a convert. The next year she opened a kindergarten of her own.

In 1870, after studying the technique at first hand in Germany, she founded the first public kindergarten in America at Boston.

Margarethe Schurz, meanwhile, succumbed to ill health and invalidism, and died in 1876. Her husband lived for another 31 years, lovingly attended by Agatha, the first kindergartner, and her sister, Marianne.

And Watertown, after its brief dream of becoming a metropolis, lapsed into a quiet midland town, developing a culture all its own and treasuring memories of the first kindergarten.

The building in which it was held still stands, though in altered form, and near the door, attached to a stone, is a bronze plaque paying tribute to Mrs. Schurz. In this centennial year various programs will commemorate the achievement of the vivacious little lady who began it all.

Construction of Colorado River Project Will Not Affect Current Agricultural Surplus Problems

EXTENSION OF REMARKS
OF

HON. HENRY ALDOUS DIXON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. DIXON. Mr. Speaker, the upper Colorado project will not add to the agricultural surpluses for the following reasons:

(a) The construction schedule will prevent any material farm production within 10 years of the date of authorization. The surplus may be resolved by that time.

(b) During the second 10 years of construction not more than one-half the 132,020 acres can possibly be brought into production.

(c) The principal crops to be grown on this acreage will be specialty crops, fruits and vegetables, alfalfa and and forage for cattle and sheep which feed on the ranges during the summer. The upper basin States are even now in a deficit feed area—and Federal aid has had to be extended to them.

(d) Most of the wheat grown in the upper basin States is on dry land. As water is put on these areas the land goes out of wheat and into other crops.

(e) The population of the United States is growing at a very rapid rate and it is estimated that by 1975 every acre of tillable land will be required to provide the food and fibre needs of the United States. By the time this project comes into full production the crops grown will be urgently needed.

(f) The principal of the soil bank will not be violated. In the case of this project it is the water bank that is needed. This project must be started now so that the water now wasting into the sea may be put in the "water bank"—storage reservoirs—and made available to be drawn upon when the facilities are ready to put the water to beneficial consumptive uses. It will take at least 7 years to build the dams and 10 to 15 years to fill them. The water bank must be filled as soon as possible while water which is wasting into the sea is available for the filling.

IMMEDIATE PLANNING VITAL TO MEET FUTURE NEEDS

If construction were begun tomorrow on the proposed upper Colorado River storage project, that project would not add to our surpluses of agricultural commodities.

First, the estimated schedule of construction shows that there will be little acreage put into production during the first 10 years after authorization:

(a) It will take 10 years to develop and let contracts for construction of the storage reservoirs to provide regulation of the river and to put water in the bank, so to speak, for use downstream during dry years and to produce power—a by-product, revenue from the sale of which will help pay for the project.

(b) The first lands brought into production are scheduled for the Le Barge participating project in Wyoming, which will in 1962—some 6 years from now—amount to 797 acres. In 1963 the Le Barge project will irrigate another 797 acres and the Smith Fork project will bring in 757 new acres. By 1966, 10 years from now, only 35,007 new acres will have been brought into production.

Second, during the next 10 years of development, the average new acreage to be brought into production will be less than 3,000 new acres per State per year.

(a) By 1975 every participating project will have completed its development except the central Utah project, which will bring into production 1,586 acres annually until 1980.

(b) Land taken out of production in these four States annually for urban development, highway construction, and defense installations greatly exceeds the additions which the upper Colorado River storage project will make to cropland acreage.

Third, by the end of the second 10-year period—1975—assuming the project were authorized today, it is estimated that our food requirements will be 41 percent greater than in 1950. The greatest increased needs will be for those foods, the production of which comprises the major agricultural activity of the four upper basin States—fruits, vegetables, alfalfa, forage, and seed grains.

(a) A 41.6-percent increase in beef production; a 51.8-percent increase in lamb production; and a 66.3-percent increase in chickens and turkeys will be required to meet consumptive demands.

(b) A 43.8-percent increase in fluid milk production will be required to meet consumptive needs.

(c) A 37.2 percent in fruit production, excluding citrus fruits; and a 62.6-percent increase in processed vegetables will be needed for consumption.

(d) A 43-percent increase in livestock including feed and forage will be needed by 1975.

UPPER BASIN CROPS WILL BE URGENTLY NEEDED AND ECONOMICALLY PROVIDED

In 1952 the President's Materials Policy Commission, based upon a now-antiquated population estimate of 193 million in 1975, concluded that by 1975 we would need a 41-percent increase in our total consumptive food requirements over those of 1950.

The Commission estimated that by 1975 a 49.4-percent increase in meat would be required. On a per capita basis this represents an increase in consumption of 17.2 percent. In other words, whereas we were consuming individually 146.1 pounds in 1950, each of us would consuce in 1975, 171.1 pounds.

This is in keeping with the trend in the consumption pattern of the American people toward livestock products, and away from cereal crops. But in the light of more recent population studies by the Census Bureau, it is very likely that we shall need instead of a 49-percent increase anywhere from a 55- to a 65-percent increase in meat production. The Census Bureau now estimates that by 1975, we probably shall have a population of 228 million—35 million more than the President's Materials Policy Commission forecast about 4 years ago. This may even be for short of an accurate forecast since as Dr. Ray E. Hoffman pointed out in his study, "The Reclamation of Land for Agricultural Purposes," contained in volume 3 of the Hoover Commission Task Force's Report on Water Resources and Power:

> The United States is now experiencing a substantial increase in population * * * population growth provides the most obvious indication of future food and fiber requirements. The rapid increase in population numbers in the United States was almost completely unexpected by experts in the field. National thinking and policy have been slow to adjust from the forecasts made by population experts during the 1930's to the effect that static population was in store for the United States at an early date. In 1947, for example, Whelpton prepared a forecast for the Bureau of the Census in which he forecast a projection of a population of 156,775,000 in 1960, and 169,801,000 in 1975. The 1960 forecast was exceeded in 1952 and the 1975 forecast will certainly be exceeded by 1960 (pp. 1161–1162).

In any event, if we judge the future by the past, we are going to have an expanding population which will require a large increase in livestock production. Livestock production is the principal agricultural commodity produced in the intermountain States of Utah, Colorado, New Mexico, and Wyoming. To the livestock producers in these areas, increased livestock production requires more water for without water the necessary feed and forage crops cannot be produced to sustain larger cattle numbers some 20 to 30 years from now.

This is the purpose of the agricultural features of the upper Colorado River Storage project, and it especially explains why the LeBarge, Seedskadee, Lyman and Florida irrigation, or participating projects, as they are called, are scheduled for early construction. These projects will provide water for high valley irrigated farming areas devoted primarily to the growing of forage crops and hay meadows.

The valleys of moderate to high elevation in the four States of Colorado, New Mexico, Utah, and Wyoming are from 4,400 to 6,000 feet in elevation. They have a variable growing season of from 100 to 185 days and variable precipitation from less than 10 to 16 inches. In these areas, forage crops for livestock use as a supplement to range grazing in the mountains predominate.

The relatively narrow valleys in high mountains are above 6,000 feet in elevation. Here the growing season is less than 100 days, and the precipitation more than 15 inches. Here the main production of forage is limited to hay meadows.

Mr. Speaker, some critics of the upper Colorado River storage project, especially the southern California critics, have made fun of irrigation projects whose principal purpose is to irrigate forage and pasture crops. First, may I point out that alfalfa, meadow hay, and other forage crops for livestock are in short supply in the intermountain States. Utah, Colorado, New Mexico, and Wyoming are deficit feed-producing States. Second, the alfalfa and meadow hay produced in these valleys of moderate to high and high elevations are not under price support. Third, although we may have surplus beef cattle num-

bers now, such will not be the case 20 to 30 years from now when the Colorado River storage project is completed.

Research results recently published by the Department of Agriculture make it very clear that hay can be produced on high mountain valley meadows with startling results. For example, on July 25, 1955, the Department announced that:

High-protein superhay grown on mountain meadows in Colorado, proved as efficient in producing gains in beef cattle as commercial protein supplements in tests conducted cooperatively by the United States Department of Agriculture and the Colorado Agricultural Experiment Station.

Although superhay is too high in protein to be used as the basic ration for beef cattle, western ranchers are interested in it because it can be produced economically on small plots and fed as a supplement to average quality hay.

At Pack County, Colo., 2-year-old bred heifers fed crude protein in the form of 2.6 pounds per day of superhay containing 15.6 percent crude protein gained 0.88 pound per day. However, heifers fed the same amount of crude protein as cottonseed cake gained only 0.74 pound daily. Both rations included 12.5 pounds per day of average quality hay.

The high-protein hay used in the tests was produced by the application of 400 pounds per acre of nitrogen fertilizer to an intermittently irrigated soil. When two harvestings were made, hay yields of 5½ tons per acre containing 22 percent crude protein were found to be possible. Winter feeding often lasts 180 days in these regions and commercial protein supplements are added to low-quality hay ration to maintain a good breeding herd and to insure a satisfactory calf crop.

Through recently conducted research, grass-legume forage production on irrigated land can be remarkably increased by better management practices. On August 24, 1955, the Department of Agriculture announced that:

1. Frequent irrigation—7 to 11 days intervals—produced almost a fourth more forage when the surface soil layers contained 60 percent to 65 percent of the available soil moisture.

2. Cutting the plants when 12 inches high rather than more frequent clipping at 6-inch height, produced about 2,800 pounds more forage per acre.

3. Application of nitrogen in three 100-pound applications produced a total yield of 10,300 pounds of forage per acre, if they were staggered to help production during late summer when it normally falls off.

Yes, Mr. Speaker, the growing of grass-legume forage on irrigated lands is an efficient use of water in an area specializing in livestock production.

Southern California critics of the upper Colorado River storage project have been critical of producing alfalfa on, as they put it, the marginal lands which the participating or irrigation projects would bring into production.

Rather an odd charge, is it not, when one stops to think that over 20 percent of the total irrigated land in the 17 Western States, including California, is devoted to its production. Odder still, Mr. Speaker, is the fact that the results of experiments at the Department of Agriculture's Salinity Laboratory at Riverside, Calif., reported August 10, 1955, show that "an unusually high salt tolerance was found to be characteristic of alfalfa."

Much of the soil in the West is high in salt content, which makes the growing of many crops difficult. But alfalfa's outstanding ability to grow on salty land is highly important to the livestock economy of the West in general and that of the intermountain States of Utah, Colorado, and New Mexico in particular.

Specifically these experiments revealed that:

First. Alfalfa can withstand appreciable salt concentrates without showing any symptoms of leaf burning—a common result when other crops are grown on lands having a high salt content.

Second. Alfalfa grown on salty soil was just as rich in provitamin A as that grown on salt-free control plots; in fact, in many cases the salty soil increased the amount of provitamin A present.

Third. Most varieties of alfalfa produced one cutting per year more on the salt plots than on the control plot.

Fourth. All varieties showed greater salt tolerance in cool weather than in hot weather. This is an important and desirable characteristic in mountain valleys having 100-day growing seasons or less.

In a few words, Mr. Speaker, land not generally suitable to the economic production of high value cash crops are quite capable of yielding quality alfalfa, meadow hay, and grass-legume forage crops where adequate water is available. There production is high, as these research results indicate is and can be the case, they provide a source of relatively cheap, nutritious, and succulent feed of high animal canning capacity.

In the light of our anticipated needs for a 55 to 65 percent increase in meat production by 1975, when the Census Bureau estimates we will have a population of 228 million, it is important that we not permit our concern with temporary and short-run low prices for livestock to obscure our vision with respect to the need for planning and devising means of assuring an adequate supply of meat products 25 to 30 years from now.

As Dr. Hoffman phrased it in his study for the Hoover Commission Task Force on Water Resources and Power:

It is ironic that one of this Nation's most pressing domestic problems, agricultural surpluses, is an outgrowth of something so necessary to the general welfare as a highly productive agriculture. It is important that long-run questions of food and fiber requirements are not obscured and sidetracked by periodic problems of surpluses.

The agricultural features of the upper Colorado River storage project represent a step in the direction of planning for the production of our long-range food and fiber requirements.

UTAH'S RECLAMATION PROJECTS DO NOT ADD TO SURPLUS CROPS IN GOVERNMENT STORAGE

Mr. Speaker, the Bureau of Reclamation, published in October 1955, the reclamation achievements of the Strawberry Valley project located near Provo, Utah.

In the light of the propaganda campaign the southern California water users interests have urged against the upper Colorado River project, I believe a résumé of the agricultural aspects of the Strawberry project will serve to further reveal the erroneous nature of their criticism. Especially this is in light of their statement that construction of that project would add to our agricultural surpluses.

In Utah, the agricultural areas are in typical valleys wherever a stream emerges from the mountains or where water supplies can be made available. Here at the mouths of those canyons and in those mountain valleys are located the cities and towns and the agricultural and industrial developments. The elevation of these valleys varies from 4,500 to 5,000 feet. The growing season varies from 110 to 185 days. The annual precipitation varies from 12 to 18 inches in the irrigated area most of which comes during the nongrowing season. Soils are generally highly productive.

It is for just such a valley that the Strawberry reclamation project provides water in Utah County, Utah. The project, for which construction was authorized in 1905, furnishes approximately 60,000 acre-feet of water to irrigate about 42,000 acres of new lands and lands which need supplemental water. The crops produced on these project lands are feed grains and forage crops for livestock, fruits, and vegetables, as the United States Bureau of Reclamation reports point out:

The principal crops produced from an acreage standpoint are alfalfa hay and small grains. Three cuttings of alfalfa are obtained, with the project average per acre yield running between 3 and 4 tons; however, 7 tons are not uncommon. In 1954 the acreage of irrigated barley comprised over 60 percent of the small grains which was used almost entirely in local feed lots for the fattening of beef cattle and sheep. The new strains of barley are yielding over 100 bushels per acre on the better farms. Virtually all the wheat grown is fed to poultry and used in the fattening ration for beef cattle along with barley.

Most of the vegetable and truck crops such as sweet corn, canning peas, lima beans, and tomatoes are processed by the two large canneries located on the project. These canned goods are shipped both to eastern and western markets. Quality fruit, apples, peaches, cherries, apricots, and berries are grown on the project and shipped by rail and truck principally to the East and Midwest (p. 10).

Yes, Mr. Speaker, contrary to what the southern California opponents of the upper Colorado River project have said, the agriculture of the four upper basin States of Colorado, New Mexico, Utah, and Wyoming is predominantly a livestock enterprise. The feed grains—oats, barley, corn, wheat, and rye—produced in these States does not go under price support and into Government warehouses, but primarily is fed to livestock.

For example, on reclamation projects in Utah, including the Strawberry project:

First, 1,647,155 bushels of barley were produced in 1954, but only 36,402 bushels or 2.2 percent was placed under price support.

Second, 15,751 bushels of corn were produced in 1954, but only 8 bushels or

.05 percent was placed under price support.

Third, 360 bushels of rye were produced and none was placed under price support.

Fourth, 475,046 bushels of oats were produced in 1954, but only 1,663 bushels or 3.5 percent were placed under price support.

Fifth, 921,029 bushels of wheat were produced in 1954, but only 71,748 or 7.7 percent was placed under price support.

The rangelands of the surrounding mountains and plateaus can be used for grazing only during the summer months, and as a result only about 54 percent of the annual forage requirements for beef cattle and sheep in Utah can be obtained from rangelands. The other 46 percent of the forage requirements for sheep and cattle must be produced in the irrigated valleys. This is why such a small amount of the feed grains, although eligible for price support, ever ends up in Commodity Credit Corporation warehouses. There grains are not produced for commercial sale, but rather for livestock feed. Without adequate water to irrigate these valley croplands, it would not be possible for Utah and the other intermountain States to produce feeder cattle, one of its principal agricultural products.

The importance of irrigated cropland to the livestock industry of the intermountain West is well exemplified by the Strawberry project as the Bureau of Reclamation publication points out.

When the project was authorized by Congress 56,000 acres of watershed lands surrounding the reservoir and suitable for controlled grazing were withdrawn from the public domain in order that this area might be properly protected against erosion. The grazing lands are administered by the association, and the grazing permits which are issued only to members of the association, are based upon the water rights held in the association. This source of summer grazing together with the Forest Service land and public domain desert lands to the west, administered by the Bureau of Land Management, has encouraged the raising of cattle and sheep. Complete use of the surrounding mountain and desert-grazing lands, much of which is seasonal in nature and usable only where there is a stable feed base, is dependent on the Strawberry Valley project. The livestock which use the surrounding grazing lands in the summer are fattened for market during the winter months or held over for breeding stock, using the hay and grain grown on the project lands (p. 12).

In Utah, as well as the States of Colorado, New Mexico, and Wyoming, the acreage and yield of irrigated lands fluctuates each year with the available water supply. Nearly every year there is a considerable amount of land which does not have a full year's supply of water.

Mr. Speaker, this is one reason why the construction of the upper Colorado River storage project means so much to the farmers and livestock producers of the four States concerned. Water will stabilize crop production, it will make possible a greater production of feed and forage crops and permit a full utilization of the range resources of the area.

BUREAU OF RECLAMATION SAYS: "IRRIGATED LANDS IN FEDERAL RECLAMATION PROJECTS DO NOT SIGNIFICANTLY AFFECT NATIONAL CROP SURPLUSES"

Opponents of the Colorado River project have reproduced in the RECORD a table prepared by the Bureau of Reclamation showing by participating irrigation project the crops to be grown which are also eligible for price support. The supplication and impression they wanted to create by this action was that the 132,360 new acres to be supplied water, and the 233,930 acres to be supplied supplemental water by this project, will create huge surpluses of agricultural commodities.

At the same time, they also should have placed in the RECORD, so that you could have all the facts, the Bureau of Reclamation's recent publication, Federal Reclamation and the Crop Surplus Problem. This study makes the following points with respect to the impact of reclamation farm production upon national production and the agricultural surplus problem:

1. Irrigated land in Federal reclamation projects does not significantly affect national crop surpluses. Traditionally about half of the cropped acreage on reclamation projects is planted to crops used exclusively for feed and forage essential to proper utilization of the 7-million acre western range. Much of the remaining acreage is planted to fruits, nuts, seed, vegetable and related crops, many of which are still in short supply, and all of which are needed to supply the Nation's protective foods.

2. Reclamation project harvests have a negligible effect on the price-support program of the United States Department of Agriculture. On September 30, 1955, approximately 86 percent of the investment of the Commodity Credit Corporation in price-supported commodities was in wheat, upland cotton, corn, tobacco, and rice.

(a) Wheat production on Federal reclamation projects constitutes less than 2 percent of United States production. It is planted primarily for local feed purposes and to balance crop rotations. For these reasons, wheat production is reduced more than 50 percent when western dry farmland is converted to irrigation.

It is general information that the upper basin States will produce no cotton, tobacco, or rice, and very little corn under the Colorado project.

St. Louis Post-Dispatch Urges Passage of the Colorado River Storage Project

---

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. DAWSON of Utah. Mr. Speaker, the Colorado River storage project has been violently opposed by certain selfish interests in southern California. This opposition is obviously motivated by sectional interest, as southern California will gain fabulous wealth if it can keep Wyoming, Colorado, Utah, and New Mexico from developing and using the water that rightfully belongs to these States.

We have tried diligently to place the true facts concerning the Colorado River storage project before this Congress. We have at all times invited the closest study of these facts.

In the past 10 days 2 major newspapers of Washington, D. C.—the Star and the Post and Times Herald—have strongly endorsed the Colorado River storage project. Now other influential papers throughout the Nation—newspapers outside the area directly concerned and so without any possibility of sectional interest—are adding their considered opinions that the Colorado River storage project is a worthwhile investment for the Nation.

The highly respected St. Louis Post-Dispatch has now fully endorsed the project. This is particularly impressive, as the same newspaper was opposed to the project a year ago, solely on the ground that the proposed Echo Park Dam would invade the boundaries of Dinosaur National Monument. Now that the Echo Park issue has been permanently removed from consideration, the St. Louis Post-Dispatch has made an objective analysis of the project as an investment in the Nation's future and come up with the logical conclusion: That the storage project should be built.

The Post-Dispatch has not only analyzed the Colorado storage project, it has also analyzed the opposition to the project that stems from southern California. It strongly condemns what it accurately terms the "dog in the manger" attitude of southern California, and points out that "the narrow interests of one State cannot be allowed to take precedence over the general interest."

Mr. Speaker, under unanimous consent, I insert the full text of the editorial of Friday, February 24, 1956 in the St. Louis Post-Dispatch, entitled "Where the Colorado Winds," as an extension of my remarks:

[From the St. Louis Post-Dispatch of February 24, 1956]

WHERE THE COLORADO WINDS

The upper Colorado development project is due to come to a vote within a few days in the House of Representatives. Since the objectionable Echo Park Dam, which would have invaded Dinosaur National Monument in northwest Colorado, has been stricken out, the measure is deserving of support. California is taking a dog-in-the-manger attitude and fighting the bill both fairly and unfairly, but we trust Congress will not lose sight of the issues involved that are bigger even than California.

Arizona, Colorado, Wyoming, Utah, and New Mexico are affected by this legislation as well as California. So is Mexico. The apportionment of the waters of the Colorado River system between the upper and lower Colorado Valley, and between the United States and Mexico, is dependent upon prudent storage and timely withdrawal of those waters. That is what the development project is intended to accomplish.

Water is the difference between desert and habitation, between barrenness and productiveness, in the parts of the United States involved in this project. It cannot be permitted to continue wasting away. Nor can the narrow interests of one State be allowed to take precedence over the general interest. To still destructive quarrels and to enhance the usefulness and wealth of a considerable region of our country, the upper Colorado project is very much needed.

Persecution of the Church in Ukraine and Other Communist Dominated Countries

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. MACHROWICZ. Mr. Speaker, persecution of the church in Communist countries is one of the most brutal and vicious symptoms of barbarian and atheistic communism. The Moscow tyrants see in the church the symbol of our modern civilization and the one great threat to their dream of world occupation. For that reason, they have set out on a ruthless campaign of terrorism, consisting of murder and imprisonment of church prelates and deprivation of their civil rights.

Despite a number of protests by our Government, these persecutions continue and there is no present likelihood that the Communists intend to heed our protests. The United Nations is an organization which was formed to maintain world peace through enforcement of respect for human rights and international decency. There is no room in that organization for a government which refuses to respect these rights. It is, therefore, high time that our representative in the United Nations insist on placing on the agenda the question of the persecution of the church in the Communist-dominated countries.

I am glad to say that Congress has already assumed its share of responsibility to act. The Select Committee on Communist Aggression has presented to Congress a valuable report showing the astounding extent of this persecution. Unfortunately the executive department of our Government has failed to put the recommendations of that committee into effect.

I am informed that a subcommittee of the Committee on Foreign Affairs, headed by the Honorable THOMAS DODD, of Connecticut, will shortly take additional testimony from recent exiles and escapees from behind the Iron Curtain to substantiate the charges of the continuance of this horrible condition in countries occupied by the Communists.

I sincerely hope and trust that the persecution of the church, not only in Ukraine, but in all countries under Communist domination will be fully considered by that committee.

Under leave granted, I submit herewith a copy of a memorandum, many of which have been received by me from constituents urging action on this important issue:

MEMORANDUM

Christianity has been existing in Ukraine for more than 1,000 years. It has fostered a profound faith in God among the people, and has begotten abiding moral principles, and nourished a new culture and erudition.

In December 1917, Communist Russia invaded Ukraine and in 1919–20 occupied the eastern provinces of this country. The Soviets were bent on extirpating Christianity from these regions. In their coup d'etat they published aggressive antireligious propaganda and terrorized the people with threats of exile, torture, and death.

First, the Communists attacked the church in eastern Ukraine. Within 10 years, from 1921 to 1931, they unjustly arrested and ruthlessly murdered 34 Ukrainian Orthodox bishops and more than 3,000 priests. Hundreds of thousands of the faithful were inhumanly tortured in prisons or deported to concentration camps in Siberia; a greater part of these innocent people died martyrs to their faith; the remainder still endures the appalling trials and hardships of imprisonment.

The Reds destroyed 80 percent of the churches (many of these churches contained precious historical relics, as for example the golden domed Michalivsky monastery in Kiev from the 12th century); other churches were despicably converted into warehouses, theaters, and convention halls; monasteries were outraged and cemeteries profaned.

By 1930 the Communists had completely liquidated the entire Ukrainian Orthodox Church, barring it from all public activity.

Though article 123 of the Soviet Constitution, which is binding in Ukraine as well as the U. S. S. R., explicitly recognizes freedom of religion, yet, during the first Red occupation of western Ukraine (1939–1941), the Communist regime overtly persecuted the church, arresting many Ukrainian priests and ruthlessly murdering 27 of them.

This anti-Christian terror adopted more hideous means of exterminating Christianity in Ukraine during the second occupation of this country beginning in 1945. On April 11, 1945, the Soviets arrested the Metropolitan of Halych and Archbishop of Lviv, Joseph Slipyj, 80-year-old Bishop Gregory Khomyshyn, Bishop John Latyshevskyj, Bishop Nicholas Charnetskyj, C. SS. R., and Bishop Nykyta Budka. On June 25, 1946, Bishop Josaphat Kotsylovskyj, OSBM, and Bishop Gregory Lakota were imprisoned. All these bishops were condemned to forced labor for 8 to 10 years and even life; the imputation was lawfully unjust. Some of these bishops (for instance Bishop Gregory Khomyshyn and Bishop Josaphat Kotsylovskyj) later died from maltreatment in prison. Still more, when Archbishop Joseph Slipyj's or other bishops' terms expired, the Reds would not release them from prison.

In the autumn of 1947, the Communists murdered Bishop Theodore Romza, Uzhorod, Carpathian Ukraine, and in 1950, the Bishops Paul Gojdich, OSBM, and Basil Hopko, Pryashiv, Czechoslovakia, were imprisoned. On January 15, 1951, Bishop Paul Gojdich was tried and unjustly condemned to forced labor for life. Bishop Basil Hopko is now in a concentration camp.

Altogether, 10 Ukrainian Catholic bishops have been liquidated by the Reds.

In 1946, the Soviets enjoined the legal continuance of the Ukrainian Catholic Church in Ukraine. Thus, in our own 20th century, it has been reduced to the sorrowful plight of the "Church of the Catacombs," as was the primitive church during the Neronian persecution.

Two thousand secular priests and monks, for rightfully refusing to acknowledge the patriarch of the Russian Orthodox Church as their head—this church is now subservient to the Communists—were arrested and deported to slave labor camps. The Reds exterminated all 5 dioceses of the Ukrainian Catholic Church, desecrated 4,400 of its churches and chapels together with 195 religious houses. The Communists continue to oppress mercilessly the Ukrainian laity for remaining steadfast to its Christian heritage, church, and faith.

Therefore, I respectfully request to present to Congress the dreadful situation of the religious persecution in Ukraine and ask to propose that Congress inquire into this anti-Christian terror, and that a special designated congressional committee hold hearings of witnesses of the aforesaid situation.

I, also, request that the Secretary of State propose to the American delegation in the United Nations that the condition of the persecuted church in Ukraine be placed on the agenda of the United Nations Assembly.

Ship of State in Need of a Rudder?

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an article by Mr. Constantine Brown which appeared in the Evening Star on February 21. No comment.

SHIP OF STATE IN NEED OF RUDDER?—OUTCOME OF GERMAN AND GREEK VOTES DRAMATIZES WOES UNITED STATES FACES IN EUROPE

(By Constantine Brown)

Isolationism is dead and buried in America. Yet we may become isolated in our attempt to prevent the free world from being engulfed by the Reds during the progressive deterioration of the political conditions in Europe which are increasingly playing into our enemies' hands. The Sunday results of a local election in Germany and the general election in Greece dramatize the existing trends. These, coupled with a hit-or-miss foreign policy which gives the outside world the impression that the American ship of state is without compass or rudder, give some of our political men more headaches than all our immediate domestic problems combined.

Our politicians are reluctant to place before the public these facts of life in their full nakedness, lest they be denounced as pessimists or defeatists. Yet they do not doubt—especially after Marshal Zhukov's speech last Friday—we are now in an unprecedentedly difficult position.

Before we tangled with the Axis Powers in the last war we had a cushion between us and our enemies. The resistance of the Western Powers which had been attacked by the totalitarians gave us some time to improve our defenses. We have endeavored since 1950 to recreate that cushion by organizing the farflung NATO and SEATO and by bringing Germany into a European defense system which seems now to be dying on the vine.

The elections in Rhine-Westphalia, the largest and most populous of the German federated states, provided a serious setback for Chancellor Adenauer. Opponents of his policies of creating a German military establishment to join NATO combined their forces and won the election in that province. This was a demonstration favoring neutralism—the price asked by Moscow to permit the unity of the former Reich—and will result in a further legislative delay in the creation of a 500,00-man army. The results in Rhine-Westphalia, it is feared here, will have a strong impact on future similar elections in Western Germany and tend to damage further the brittle fabric of the Western defense system.

A number of explanations may be given as to why the Germans are shying away from the enactment of laws which would create an army to defend their borders. The most plausible, however, is that they have lost confidence that America really persist in its determination to stand up strongly against

the Russians and the Chinese. They hear the Russian swashbucklers tell the world that they can crush any resistance and at the same time reports from the United States that we are falling behind these potential aggressors in a number of nonconventional weapons. The Germans, like some other allies, are concerned over the fact that at a time when the Soviets may demand "What will it be, surrender or aggression?" we are counting dollars for our defense system instead of having "crash" programs.

Other considerations, but also akin to lack of confidence in America, have produced this week's election results in Greece. The anti-Communist Government headed by Prime Minister Constantine Karamanlis won a flimsy majority in Parliament but lost by 200,000 in popular votes. Here again the ballots were cast by extremists: Those who favor an immediate reconcilation with the Communist group and want to go along with Moscow's coexistence, and those who are irked over the Cyprus problem and angry at Turkey. They want to break away from NATO and accept the U. S. S. R.'s promises of economic assistance.

The Communists, clothed as nationalists, are at the bottom of the violence which has marked for months the struggle for unity between Cyprus and Greece. The strong-fist measures of the British forces in Cyprus have made a serious dent on the Greek public. So have the Soviet approaches through Bulgaria and Yugoslavia. Our policies in Greece have done nothing recently to endear us to that ally. Dulles alone cannot win friends, as our policymakers should have learned from our experiences in all the allied countries where neutralism has been gaining important ground in the last few years.

What painful surprises we may face within the next few months in the Far East and in the Middle East cannot be answered yet. But the situation as it is today bodes nothing favorable to our efforts to preserve at least a part of the world free. Our policymakers seem to juggle with words which apparently have nothing to do with their uncertain and obscure actions.

February Birthdays

EXTENSION OF REMARKS
OF
HON. HAROLD O. LOVRE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. LOVRE. Mr. Speaker, I wish to place in the RECORD an article concerning birthdays of noted Americans during the month of February. The article was written by Mrs. Walradth who publishes a weekly newpaper in the thriving Brookings County community, White, S. Dak. I am certain that if all Americans gave proper recognition not only to the births of these noted men but also to their basic philosophies we would find ouselves marching more firmly along the road leading to a greater America. The article follows:

It is hoped that this month, with its emphasis on the birthdays of our greatest Americans, will kindle in our hearts a renewed patriotism and a stronger allegiance to the principles of Americanism. That we will have a strengthening of faith that right makes might, not the opposite. If the ragged continentals could outclass the well-trained English, it was because their cause was just and so the hosts of the righteous fought on their side. Think of this when you are tempted to believe that communism is stronger than a system that has for its motto, "In God we trust."

Accomplishments of the Subcommittee on Government Information of the House Committee on Government Operations

EXTENSION OF REMARKS
OF
HON. ROSS BASS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. BASS of Tennessee. Mr. Speaker, I wish to call your attention to a speech by Hugh Boyd, publisher of the New Brunswick (N. J.) Daily Home News and Sunday Times and a member of the freedom of information committee of the National Editorial Association, which is headed by Guy Easterly, publisher of the La Follette (Tenn.) Press. The following speech, given January 20, 1956, at the annual convention of the New England Weekly Press Association in Boston, Mass., lists the accomplishments of the Subcommittee on Government Information of the House Committee on Government Operations:

The opportunity of speaking to you regarding the Moss subcommittee, its aims and its progress means a great deal to me.

The correct title of this committee is the Government Information Subcommittee of the House Government Operations Committee. This takes too long to say so I'll simply call it the Moss committee.

During the past few years I have been an observer and, at times a participant in the work being done to preserve freedom of information and to safeguard the people's right to know.

Despite our personal viewpoints on this effort, it is crystal clear that any effective work must be soundly based upon a firm grasp of the problem, of its extent and of its consequences.

Therefore, a discussion of the Moss committee will, I hope, shed a little light on the whole issue of the withholding of news from the press and the Congress and its inevitable result—the denial of the people's right to know.

It's particularly significant that we can discuss this question before New England editors, the journalistic heirs of the publishing responsibilities and restrictions of colonial times.

It's especially significant that this discussion should be held in Boston, the city where on September 25, 1690, the first regularly published newspaper in this country appeared.

Here the Englishman Benjamin Harris published the paper entitled "Public Occurrences Both Foreign and Domestic." It was to have been published monthly.

Four days after its publication the governor and council issued the statement that the paper had been published—

1. Without the least privity or countenance of authority.

2. Declared their high resentment and disallowance of said pamphlet.

3. Ordered that same be suppressed and called in.

4. Forbade anyone in future to set forth anything in print without license first obtained.

There may be a connection between a discussion of the Moss committee and public occurrences.

Obviously there is no longer any possibility of a paper being licensed or being terminated by government edict.

However, the Moss committee work, if successful, may result in lessening the limits of access to news which apparently have been imposed by certain Government officials and Government agencies.

Now as to the committee itself. What is it? Why is it? What are its functions, actions, and responsibilities?

Perhaps the best place to start is at the beginning. I would like to emphasize the thought expressed in two paragraphs of a letter of June 9, 1955, written by Congressman WILLIAM L. DAWSON, chairman of the House Government Operations Committee, to Congressman JOHN E. MOSS, Democrat, of California's Third Congressional District, establishing the subcommittee. These thoughts, to me, define the basic philosophy of the committee's founding as well as its mission:

"An informed public makes the difference between mob rule and democratic government. If the pertinent and necessary information on governmental activities is denied the public, the result is a weakening of the democratic process and the ultimate atrophy of our form of government.

"You will seek practicable solutions for such shortcomings, and remedies for such derelictions, as you may find and report your findings to the full committee with recommendations for action."

Now who is Congressman Moss? Congressman JOHN E. MOSS, representative from California's new Third Congressional District, serves on two important committees in the House of Representatives—the Post Office and Civil Service Committees and the Government Operations Committee.

Congressman Moss has been active in political affairs since 1937, when he joined the Young Democrats Club of Sacramento. In 1938 he became a member of the California Democratic State Central Committee. He was a director of the California Young Democrats from 1938 to 1942, and was a Young Democrat national committeeman from 1942 to 1944.

Congressman Moss has been a salesman, office manager, and credit manager in Sacramento, and he established his own retail business there after World War II. He is a real estate broker. He served in the United States Navy during World War II.

What are his views on access to news? They are fully explained in the CONGRESSIONAL RECORD of August 2, 1955, which carries remarks made by the Congressman, entitled "Is There a 'Paper Curtain' in Washington?"

Included among the Moss committee staff working on this program are three former newspapermen: Staff Director Samuel J. Archibald, who has worked on papers in Colorado and California; J. Lacey Reynolds, senior consultant, who is a veteran Washington correspondent, and Jacob Scher, an experienced Chicago newspaperman who is now professor of journalism at Northwestern Univrsity. Scher is also the editor of the Freedom of Information News Digest, published by the National Editorial Association.

So you see the staff selected had a solid background in newspaper work. This has been invaluable in both the preliminary and the continuing work of the committee.

Now the committee had been named, the staff selected, and it was time to take the first step.

On June 23, 1955, Moss stated that contacts with newspapers and newspaper organizations had been made. Staff members were discussing the question of availability of news from Government sources with these newspapers and newspaper organizations.

The second step was the preparation and distribution of a questionnaire regarding governmental policies, practices, and procedures in regard to making information available to the public.

The questionnaire was 5½ pages long; it contained 80 questions, and it was distributed to 63 executive departments and independent agencies.

To give you an idea of the type of questions that were asked, I'll read from the questionnaire:

"1. What categories and types of information possessed by your agency are not available to—

"(a) The press and other information media serving the general public?

"(b) The Congress?

"(c) Other Federal agencies?

"(d) Business, trade, and other groups with an economic interest in the information?

"(e) Research specialists, scientists, public affairs organizations, and similar groups or individuals?

"2. On what do you base authority for denying access to or not making available such information? Please provide copies of regulations, directives, letters, policy statements, etc., bearing on the withholding of information by your agency. Please cite any court decision and statutes which relate to your agency.

"4. If the information from your agency is restricted on security grounds, list the specific statutes, Presidential directives, or other bases for such action.

"(a) What steps have been taken by your agency to insure that security classification procedures are not being abused?

"(b) What persons in your agency are authorized to apply security classifications in the first instance?

"(c) What provisions are made for review of initial security classification decisions?

"(d) Who reviews initial classifications?

"(e) How often does your agency review classified material to determine whether some of the material should be downgraded or declassified?

"(f) Who revises classifications?

"(g) What consideration is given to the public's right to know and to the importance of an informed public in the successful operation of the democratic form of government?

"(h) What methods are used to determine whether potential enemy states already possess the information?

"(i) What consideration is given to the importance of uniform availability of classified information among scientists, economists, administrators, and others entitled to special access to such information?

"9. Do you receive from other agencies complete and timely information when requested?

"(a) In how many instances was information desired from other agencies denied from July 1, 1954, to July 1, 1955? Please explain.

"(b) In how many instances was information possessed by your agency denied to other agencies from July 1, 1954, to July 1, 1955? Please explain.

"(c) Please suggest ways of improving the flow of information among Federal agencies.

"10. How can the job of making available timely, factual, and pertinent information on the affairs of your agency be improved? Please recommend any neccssary legislation."

II. PRESS

"1. How many press conferences were held by your agency from July 1, 1954, to July 1, 1955?

"(a) Who held these press conferences?

"(b) What is the basis for accreditation of persons attending the conferences and, if special accreditation is required over and above the general accreditation of the Senate and House press galleries, what are the requirements?

"(c) Are transcripts of the press conferences available?

"2. How many formal or informal 'back ground' or 'briefing' sessions have been held by your agency for the press from July 1, 1954, to July 1, 1955, and who, in general was invited?"

The replies took up more than 500 pages. They are compiled and printed in a report.

Now everything was ready for the third, and perhaps the most important, step—the holding of hearings.

Hearings were started on Monday, November 7, in Washington and continued through the week. On the opening day several reporters and editors were invited to appear before the committee. I was included in that group.

We were told by Chairman Moss that we were not appearing as witnesses and that this was not a hearing. Moss stated that it was an informal discussion to give the subcommittee members and the public the opportunity to learn the views of the specialists in the field of information and particularly their views on the free flow of information from the Federal executive agencies to the public.

Some of those testifying were sharply critical of the Government news policies. General charges of news suppression were made, specific instances of withholding of news were cited, and one newsman charged a governmental department with managing the news in order to create an impression which would reflect favorably on the Government.

Representatives from the Treasury, Agriculture, and Post Office Departments and from the Civil Service Commission testified during the first week's hearings.

A further 1-day hearing was held on January 13, 1956, when R. Karl Honaman, former Deputy Assistant for Public Affairs to the Secretary of Defense, appeared.

Starting on Monday, January 23, further hearings will be held. It is expected that representatives of the following agencies will appear at these hearings: Federal Trade Commission, Securities and Exchange Commission, Federal Communications Commission, Interstate Commerce Commission, Federal Power Commission, and National Labor Relations Board.

In addition to these agencies the Moss committee has indicated that the Pentagon, Departments of Commerce, Interior, State, and Justice, and the Budget Bureau probably will be heard sometime during the coming months. It is also expected that a panel of scientists may be heard, discussing matters which have a scientific aspect.

So much for the hearings and the committee work to date. Before giving my own views of the progress and the potentialities of this committee work, I would like to refer to the views of others.

First, this is what Chairman Moss had to say on November 10, 1955, at the conclusion of the first week's hearings:

"On the basis of the record that has been made during this first set of hearings of the Government Information Subcommittee, it appears evident that nonsecurity information has been withheld from the public which should not have been withheld. The subcommittee will continue its study of the extent of news suppression and the reasons for it.

"Some of the regulations which the subcommittee has reviewed indicate that virtually unlimited discretion, of questionable legal status, is sometimes passed down departmental hierarchies to subordinates. Also, there have been exaggerated claims of authority to withhold information based on a theory of inherent powers stemming from the Presidency. There are indications that some officials in Washington today believe they have authority to exercise Presidential powers without the President's authorization or his prior knowledge or even subsequent review of their acts.

Some agency regulations governing information are overrestrictive. They often reflect an attitude contrary to the policy statements contained in the agency replies to the subcommittee's questionnaire.

"Some outstanding inconsistencies in approach and asserted authority between the Federal agencies have been revealed.

"In some agencies discretionary authority is concentrated too heavily at the top for the free flow of news.

"I believe that a clear need for new legislation has been established. Some of the restrictions revealed by the subcommittee's inquiry lead back to statutes. Some statutes appear to have been misapplied. There was testimony that in the tax field some information will not be released without specific statutory authority. This is a curious reversal of the sound principle that the people have a constitutional right to Government information, unless provided otherwise by statutes, which are within the legislative powers of the Congress or Presidential orders issued pursuant to the President's constitutional powers.

"We can all agree on one point, I feel certain. The flow of information to the American public and to the Congress is a matter of the utmost significance under our form of government. I think all will agree, also, that the Federal Government should be brought closer to the people. This will require a breaking down of any existing barriers to the free circulation of facts, opinions, and ideas.

"This subcommittee will go about its task of studying the many complex problems it will encounter in carrying out its mission in a thorough and nonpartisan manner. In the course of its inquiry, the subcommittee will seek the advice of citizens and organizations in the fields of public affairs, business, labor, agriculture, science, and research."

Moss made some other important and revealing remarks when he discussed his committee work before members of the Associated Press Managing Editors Association, meeting in Colorado Springs on November 18.

Among other things, he reported that:

"In my opinion, the subcommittee's first hearings were extremely beneficial in indicating information attitudes of executive department officials. However, as a byproduct, I think we can point to some concrete accomplishments in our job of freeing the avenues of communication between the Federal Government and the public.

"The Comptroller of the Currency, for example, has agreed to consider a change in the policy of not reporting action on the mergers of national banks. He told the subcommittee his approval of mergers, and the conditions which he attached, were reported to the public only after the final decision had been reached. He said this has been the policy since Civil War days. Now, however, we may look forward to a fuller flow of information prior to the time mergers are finalized.

"Another agency, the Treasury Department, has agreed to back legislation to open up additional information for the public. As the result of the subcommittee's inquiry—and the display of public interest in the freedom of information question—the Treasury Department will sponsor legislation to make applications from nonprofit organizations available to the public.

"Newspaper organizations and individual reporters and editors have been fighting for months for public access to these records. The Treasury Department admits it has the authority to exempt nonprofit and nonpolitical groups from taxes; but, believe it or not, it says it has no authority to make public the reasons for granting the exemptions. An almost constant legal wrangle over whether new legislation is needed to make these facts public has been going on for 2 years. But

things are now looking up. On the morning of their appearance before the Government Information Subcommittee the Treasury Department decided to resolve the wrangle and back legislation to make the records public.

"The Agriculture Department, after discussing information practices with the subcommittee, announced consideration of a plan to release more information on the special advisory groups which help the Department formulate important farm policies.

"Even the Civil Service Commission agreed to study rewording of its regulations which seem to warn employees not to discuss anything with the public or the press. The Commission contended its very restrictive regulation was not really its policy statement on release of information. Instead, Commission witnesses said, the policy followed more nearly a six-page statement read at the opening of the subcommittee hearing. The Civil Service Commission now is considering clarifying the facts for those employees who take their cues from the published regulations instead of from statements before committees.

"I think the pattern clearly demonstrated is that of emphasis upon the freezing rather than the freeing of information. If we can bring about a change in attitude on the part of Government, recognizing the need in a democracy for people to have full and complete information about the Government, and if we can, perhaps, make a few changes in basic law clearly to establish the right of the people to know, the committee will have contributed importantly to better government."

Now for the opinions of two well-known reporters who are thoroughly familiar with the committee work and the hearings to date.

Murrey Marder, of the Washington Post and Times Herald, writing in the December issue of Bulletin of the American Society of Newspaper Editors, said:

"The encouraging opening can be gaged by what the committee demonstrated in its ability to—

"(a) Understand the problem of access to information;

"(b) Search out the real underwater obstacles which impede the flow;

"(c) Gain the cooperation of Federal witnesses in the search for improvement;

"(d) Above all, avoid the danger of turning the whole inquiry into a political head-hunting or ax-grinding foray.

"If it hadn't held a single hearing, the subcommittee, as far as some Washington newsmen are concerned, would have justified its existence in obtaining and publishing its 552-page summary of replies from 63 executive agencies to questionnaires on their information practices and policies. This is a long-sought bible in the freedom of information field; a basic text for examining—and questioning—what the agencies claim as their withholding authority.

"More fundamentally, the subcommittee succeeded in establishing that some Federal agencies do regard that section 1002 of the Administrative Procedure Act does amount to (as Dr. Harold L. Cross and others have long contended) a public records law which is a positive legal basis for disclosure of information.

"The hearings also established that some other agencies, on the contrary, regard the same law as a standard for the withholding of information.

"And to compound the picture, 38 agencies, departments boards and commissions don't refer to the law in either respect.

"The nailing down of those contradictions is a major accomplishment in itself. The subcommittee believes that alone shows the great need for cleansing the atmosphere in Government, so that there can be a mutual starting point for applying the ground rules on access to information."

Allen Drury, writing in the New York Sunday Times on November 23, describes an attitude displayed by some Government officials regarding the withholding of news. He said:

"At the extreme, this attitude is represented by the Civil Service Commission whose counsel, Lawrence V. Meloy, and chairman, Philip Young, told the subcommittee that their agency had an inherent right to withhold information from the public. This was promptly labeled 'arrogant' and 'fantastic' by the subcommittee, but the Commission's top officials were obviously in no mood to change their ways until Congress forces them to do it.

"The other agencies that have testified to date in the hearings have not ventured to go anywhere near as far as Mr. Young and his counsel. None, in fact, has claimed anything inherent about the withholding of the news. But many have cited as their authority a letter written by President Eisenhower to the Secretary of Defense, Charles E. Wilson, on May 17, 1954.

"This letter was designed to prevent testimony at the Army-McCarthy hearings by the former Army counsel, John Adams, concerning a conference among Executive Department officials at the White House. The President argued that these matters were confidential matters within the Executive Department. His position was accepted by the Senate Investigations Subcommittee, and Mr. Adams was not required to testify on that point."

And now, having given you the opinions of some of the experts, I would like to give you my own regarding the long-range accomplishments of the Moss committee and its hearings.

I realize that it is premature to draw final conclusions, but perhaps it is not too early to sense trends.

My views are based on certain experiences as a newspaperman in daily contact with the issue of access to news. My views are also based in part on the fact that I have worked with the Moss committee staff members, testified at the opening hearing and attended subsequent sessions.

To date the Moss committee has accomplished the following:

1. It has conducted a study and not an investigation.

2. Its questions have been asked and answers given to a wide range of practices, methods and laws which the Government employs in disseminating news.

3. It has focused the spotlight of publicity and public attention on the Government's handling of news.

Now we know the details of the problem which exists. The situation may be corrected by passage of legislation or by naming a watchdog committee which will keep governmental news policies under careful and continuing scrutiny.

Congressman Moss has assured me that he hopes newspapermen who are members of this audience will write his committee. The committee is interested in knowing of your views of the work done by the committee to date, your comments, favorable or otherwise, regarding the conduct of the hearings and your suggestions regarding the conduct of future hearings. He is particularly interested in your views as to what might best be done to insure the full and free flow of the news from Government sources to your readers.

As responsible newspapermen we are being given the facts.

As responsible newspapermen it is up to us to see that these facts are acted upon and that the people's right to know is protected and preserved.

Democrats Fear Eisenhower

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1956

Mr. CRETELLA. Mr. Speaker, I include for the RECORD an editorial by Gould Lincoln in the February 22 Washington Evening Star. No doubt the Democrats will continue to feed misrepresentation, vilification, and tailored illusion into their big propaganda guns, but when factual contrast is made as it is here between the Eisenhower administration and the previous Democrat regimes, we find the Democrat artillery not only backfires, but, as usual, goes off half cocked.

THE POLITICAL MILL
(By Gould Lincoln)
DEMOCRATS' FEAR OF EISENHOWER

It's no secret the Democrats have hoped for many months that President Eisenhower would not stand for a second term. It was true before the President suffered a heart attack. It's true today. The fact the President has regained his health to such a marked degree that heart experts say he could serve another 5 to 10 years in the White House has sent cold shivers down the Democratic backs.

They fear their hope—that he will not run—will be dashed. And this fear is making itself evident in a new rash of propaganda, emanating from themselves and their protagonists. First, that the President is not doing a job and will be unable to do one, because of his lack of health, and that he should not run for another term. Second, that Vice President Nixon is not qualified, either for his present office or to take over the presidency should anything happen to Mr. Eisenhower.

Contrast to Roosevelt

This line of talk—that the President should now decline to run, even though the doctors assure him he can carry on as President for 5 years or more—comes with poor grace from a political party which insisted on nominating and electing—not for a second term but for a fourth term—a President who was so ill that he lived only 83 days, including inauguration day. President Eisenhower himself, his physicians and his press secretary, James A Hagerty, have told the American people the facts about the Persident's health, the extent of his recovery—quite a contrast. The late President Franklin D. Roosevelt was reelected for his fourth term in the midst of World War II, and he took part in the vital Yalta Conference, where the Russian Communists gained so much—as history has revealed—February 4–11, 1945, just 2 months before he died.

President Eisenhower is engaged in making his own estimate of his probable strength to carry on as Chief Executive. It will be an honest estimate. The Democratic attempt to prejudice this estimate—if he decides he can run—in the minds of the people is indicative of the campaign which will be carried on against Eisenhower. It will be designed to shake the faith of the people in the President.

The smear campaign which the Democrats have in full course against Vice President NIXON shouldn't fool anyone. They hate NIXON because in his campaign speeches he has been foremost in pointing to their failure to understand the Russian Communist

threat—during the Roosevelt and Truman administrations. They hate him because he was a chief instrument in forcing the trial of Alger Hiss—which former President Truman agreed was a "red herring," when questioned by a reporter. Mr. Truman and numerous other Democratic leaders have charged that NIXON called them "traitors" and the Democratic Party "the party of treason." He never did, and none of them have been able to produce evidence he did. Apparently, they find it much easier to answer a charge that they were treasonable—a charge which was not made but has been set up as a straw man by the Democrats—than to answer a charge they were stupid in their dealing with Communists at home and abroad.

The latest line of Democratic attack on NIXON relates to the Vice President's recent address before the National Republican Club in New York and his claims that the racial minorities—particularly the Negroes—have made greater advances in the 3 years of Eisenhower administration than in any years since the Emancipation Proclamation itself. Instead of answering these claims, the Democrats have charged that Nixon improperly dragged the Supreme Court into politics when he said that Chief Justice Warren, a Republican, had spoken for a unanimous Supreme Court, ordering an end to racial segregation in the Nation's public schools. Mr. NIXON's own notes for the speech show that he wrote: "And, speaking for a unanimous Supreme Court, a great California Republican, Chief Justice Earl Warren, has ordered an end, etc." In the draft handed to the press, however, the word California was removed, and the comma shifted so that the phrase read "a great Republican Chief Justice, Earl Warren."

The Court and politics

The fact remains, of course, that the order desegregating the public schools of America came during the Eisenhower administration, and that the opinion of the court was handed down by the Chief Justice, who was a Republican governor of California before his appointment to the Supreme Court. As for dragging the Supreme Court into politics, Mr. NIXON never approached the efforts of Roosevelt and Truman in that regard. The former tried to get legislation to pack the Court for the New Deal. Mr. Truman, as told by himself, tried to get the late Chief Justice Fred Vinson to become the Democratic nominee for President in 1952. This is contrary to the Eisenhower view of what a President should do.

Michigan's Neglected Gem: Isle Royale

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, I would like to call the attention of Congress to one of the most beautiful spots in America, Michigan's Isle Royale. This national park, located 600 miles from Detroit, and 450 miles from Chicago, is the second largest island in the United States.

This island park, located within driving distance of 35 million people, should be one of the most popular spots in America and yet less than 5,000 persons visited Isle Royale in 1955. Why?

The situation is a result of inadequate accommodations for tourists on the island and lack of transportation to and from the mainland. Somewhat of a frustrating cycle exists in this instance, for until more cabins and hotels are constructed to house tourists, it will not be profitable to operate expanded boat service to Isle Royale. It is regrettable that, for want of funds, our citizens are denied access to one of Nature's finest playgrounds.

Some of the sights to be seen in this park are not to be found anywhere else in the Midwest. A herd of 300 moose roam the island; wolves and coyotes are heard after the moon comes up, and the fishing along virgin shores and inland lakes is a caster's delight.

What is needed to make Isle Royale the vacationland it should be? Living quarters, such as hotels, motels, and shelters for campers are needed, plus docking facilities for private boats and a seaplane for summer patrol.

I hope that the Park Service, which has fared well this year at the hands of the Appropriations Committee, will not be unmindful of Isle Royale and its needs for the benefit of the lovers of the great outdoors.

Storm Over the Sand Dunes—!

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. O'HARA of Illinois. Mr. Speaker, with the opening of the St. Lawrence seaway and the completion of the Calsag inland waterway project, I am confident that the future holds for Chicago the fulfillment of her destiny as one of the greatest of all ocean seaports.

At one time Chicago was the center of water transportation on the Great Lakes. It was a great era, an era in which young boys, having their ambitions set on becoming captains of sailing vessels or steamships, left home at very early ages and grew up with the Great Lakes. From handy boys on sailing and steam vessels many of them did advance to the posts of command.

The names of sailing craft and passenger ships were as well known in every family circle in the Great Lakes region as now are known the names of popular movie and TV personalities. Among my boyhood memories is the recollection of the hot indignation among many Republicans at the naming of the newest luxury excursion steamship in honor of the city of Cleveland. It was during the campaign of Grover Cleveland for the Presidency. Many Republican merchants refused to permit the picture of the new steamship to be hung in their stores, as then was the custom. They thought it was a Democratic trick to take advantage of lake shipping popularity to win votes for a candidate who had the good fortune to have a name similar to that of the city in Ohio after which the new steamship was named.

Times changed. Chicago grew mightily and expanded in many great activities, but her position as a center of shipping and passenger transportation on the Great Lakes diminished. Now with the St. Lawrence seaway and the anticipated completion of Cal-Sag she is destined to regain, multiplied a thousandfold, the glory of the past.

The Chicago River and the deepened connection of Lake Michigan with Lake Calumet, to the south, are the natural and the inevitable centers of this development. But the Governor of Indiana is advancing a different idea. He would destroy one of the great natural picturesque regions of the Nation, sacred to the sentiment of conservationists everywhere, to build a giant harbor for ocean-going vessels against need and sound marine engineering judgment.

In order that my colleagues may have full and timely understanding, I am extending my remarks to include an article from the Chicago Sun-Times of January 1, 1956, and in an extension of my remarks to follow will include an explanatory letter from John A. Brown, an eminent attorney of Chicago, who is a recognized authority in the field.

The article from the Chicago Sun-Times follows:

STORM OVER THE SAND DUNES
(By Jack McPhaul)

Spearheaded by women battling to save the scenic beauty surrounding their homes, a new storm is sweeping across the Chicago area's great nature-made sand pile.

As has been true for 40 years, housewives again are in the forefront of a spirited campaign to halt the threatened march of industry into the nationally famed Indiana Sand Dunes. The majestic dunes, some towering as high as 200 feet, begin about 40 miles south of Chicago's Loop and extend along the shore of Lake Michigan for some 25 miles between the Indiana cities of Gary and Michigan City.

The strife, which last week was producing heated charges and countercharges, centers about a proposal to build a multimillion-dollar commercial harbor in the heart of the picturesque region of homes, recreation areas, and places for scientific study.

As the wind-driven waves continued the centuries-old process of grinding up the rock of the lake bed to form new dunes, the struggle ashore pitted homeowners and land conservationists against proponents of an expanding industrial area.

Supported by some Congressmen and other political leaders, Indiana's Gov. George N. Craig is pushing preliminary plans for the construction of a giant harbor for ocean-going vessels between the residential communities of Ogden Dunes and Dune Acres.

An imposing force has lined up against the proposal. These include home owners in the two communities and adjacent areas. Some of the residents commute to jobs in Chicago. Other Chicagoans have summer homes in the dunes. Many of the homes (valued at from $5,000 to $50,000) are situated on high ridges and enjoy commanding views of the lake and the woodlands beyond the dunes.

Some 700 residents have allied themselves in an organization called the Save the Dunes Council. Recently, the group announced plans for a nationwide campaign to raise $1 million if necessary to spike Craig's harbor plan.

Richard H. Pough, conservation chairman of New York's American Museum of Natural History and president of Nature Conservancy, a national organization devoted to the preservation of natural areas, has been in Indiana to help in the anti-harbor fight and has stated he will attempt to obtain support for the council in the East.

Other Indiana groups supporting the council include the Federation of Women's Clubs, the Garden Clubs, Izaak Walton League and Audubon Society.

Proponents of the harbor, who say it would handle ocean cargoes shipped through the St. Lawrence Seaway, scheduled for completion in 1959, predict that the construction would give the sand dunes area a new industrial city as large and as important as Gary. They visualize steel and woolen mills, chemical plants, grain elevators and coal shipping facilities arising on 4,000 acres in the vicinity of the deep waterway port.

Mrs. James H. Buell, longtime Ogden Dunes resident and chairman of the Save the Dunes Council, retorts that the harbor and area industrialization would "destroy the last of the scenic dunes and effectively wall off the citizens of Indiana from their lakefront heritage."

Cost of the harbor has been estimated at from $35 million to $70 million. The governor's plan is to have the State sell bonds for construction to private interests.

The council agrees that Indiana needs additional harbor facilities, but contends that the same goals can be achieved at far less cost by improving and expanding the Michigan City port.

The council hopes to keep the harbor from its front door by raising sufficient money to buy some 2,000 acres that would be necessary for the port project. This land, said Mrs. Buell, would be turned over to the State park or extension of the present Indiana Dunes State Park.

In 1917, when industry attempted an invasion, Chicago and Indiana women participated in a dunes pageant which opened a campaign that ultimately persuaded the State to spend $1 million for a park.

Pough described the dunes as a "biological treasure house." He predicted that if such open spaces were not preserved the southern end of Lake Michigan would be in 25 years a "metropolitan slum."

Storm Over the Sand Dunes—II

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include a letter from John A. Brown, a distinguished Chicago lawyer and authority on the subject of shipping on the Great Lakes, as follows:

MY DEAR BARRATT: I am enclosing an article that appeared in the Chicago Sun-Times relative to the attempt on the part of Gov. George Craig, of Indiana, to obtain necessary funds from the Government to cause the building of a commercial harbor a few miles east of Gary, and in the heart of the dunes, which are nature's own contribution to the health and happiness of thousands of persons, especially in the hot and humid days of summer.

It is pretty hard to understand the insistence of the Governor when the rank and file of the citizens of Indiana are so strongly against his ideas, and I might add to their objections the thousands of citizens of Illinois—your constituents—who have invested so many thousands of dollars for more than half a century in building their homes in Duneland, both summer and year-round homes, along or near Lake Michigan's shores, all of whom have joined with the citizens of Indiana in preserving the dunes in their present state—some 3,500 acres of duneland now comprising the Prairie Club of Chicago, Dune Acres, Inc., and the out-of-doors groups of people from both of these States.

I hear so much about the so-called necessity urged by Governor Craig that, in order to place the matter squarely before you in asking your aid in blocking Governor Craig's scheme, let me give you a little history of lake traffic and conditions, and I speak from actual experience, as I was the attorney for certain of those interested in lake commerce, especially the Barry Bros., Independent Tug Line, and the Hursen Steamship Line, which maintained both way daily trips of freight and passenger boats between Chicago, Racine, and Milwaukee, as well as a branch of that company maintaining the same service between Chicago, Waukegan, and Kenosha.

In the latter part of the nineties Chicago had been a great inland port, practically so because of four of the commodities which it was the headquarters for on its lake travel.

The first was lumber from Michigan. Second, iron ore from Wisconsin and northern Michigan. Third, grain from all of the Middle West. Fourth, coal, hard and soft, from Buffalo, Erie, Ashtabula, and Cleveland.

The mode of lake travel was principally sailing vessels of which about 2,000 were the means of such commodities reaching Chicago.

The railroads from the East built up their lines of great steamers known as package carriers that brought to all of the lake ports, such as Chicago, Milwaukee, and Duluth on Lake Superior, which were at Buffalo and Cleveland transferred from the respective railroads to the steamers operated by such roads as the New York Central, Pennsylvania Railroad, Delaware, Lackawanna & Western, and other companies, and the ability of Chicago to handle such shipments to it, for its own use, as well as for its being the headquarters for the Middle West securing such goods, made it, and laid its foundation as the great city of the inland country.

Perhaps it was unfortunate that in the early days Chicago had no docks along its lake front to meet the needs of such lake traffic. All of the commodities brought by the sailing vessels were towed up the Chicago River, and its north and south branches, to the respective lumber yard slips, the grain elevators, the steel mills, and the coal docks. And owing to the many bridges between the mouth of the river and the respective docks and slips, the package carriers of the railroad companies were also towed to their respective yards for transfer of their goods not alone to Chicago, but to the entire West.

Barry Bros., Inc., line had 31 tugs, the Dunham Co. some dozen tugs, and a number of other tugs were necessary to properly land the vessels at the required docks and yards, and Chicago grew and prospered under such conditions.

I might also add that the Goodrich, the Graham & Morton, the Northern Steamship Co., and Hursen, and other lines maintained passenger services to all of Lake Michigan ports on both sides of the lake, and many of these boats brought in the fruits from Michigan and Wisconsin fruit belts to Chicago, as a distributing line, while during the summer months the *Whaleback* and *Virginia* made trips daily to Milwaukee, while the Goodrich and Graham and Morton companies called at all western Michigan ports up to Mackinac Island.

As you realize, BARRATT, time marches on, and conditions change, and with such changes came a complete abandonment of the aforesaid conditions.

First of all, the Michigan timber lands were stripped of all their pine and most of their hardwood. Next, the grain that came in by lake and by the Illinois and Michigan canal found its way to Port Arthur, Tex. Duluth shipped direct for export to Buffalo and Port Arthur. And Fort William built enormous grain elevators, and shipped the grain from the Canadian Provinces to Montreal for export to Europe.

As a result, the enormous elevators along the Chicago River, and its north and south branches, were closed, torn down, or from time to time burned up.

The coal docks were still operating, but only to small trade, as factory after factory turned to gas and electricity, thereby eliminating the coal from those factories, as well as the apartment buildings and homes found oil and gas excellent substitutes for heating purposes, and at the present time oil has gone away beyond coal in industries, and there are but few coal carriers on the lake, although its prices are away above those of the early days. Then too the Interstate Commerce Commission has barred the package freight carriers, as well as the railroads, carrying their coal as previously.

You of course recognize today that nearly all of the railroads are diesel equipped so that demand for coal has vanished.

As for the iron ore for the steel mills of the district are now all located at South Chicago, Hammond, Indiana Harbor, and Gary, where each company has its own docks and yards, and there is no requirement of tugs to dock them, and so Chicago has lost all of that commerce.

Well it did not require any crystal ball for observation to show what has happened to Chicago as a lake port, despite all of its railroads to take all commodities to all parts of the western country.

With the disappearance of all of the sailing vessels and the railroad package freight steamers, there was a disappearance of the Barry and Dunham tug lines, most of which were taken over by the Great Lakes Dredge & Dock Co., and even the building of the city's municipal pier at the mouth of the Chicago River—which I bitterly opposed—did not offer any inducement, or consideration, for a continuance of lake traffic, which had been such an aid to the young and growing city and railway center.

For a short time the lake boats as passenger recreation boats, plied principally as fruit carriers and excursion steamers, but Graham and Morton and Goodrich cut off all of their steamers to Lake Michigan ports, and so even the passenger excursion boats, with the rest of the shipping industry, vanished off the lakes. * * *

Thus passed the position of Chicago as the great inland port city. The north and west side tunnels were closed and city transportation by streetcars was resumed with newer bridges across the rivers, and Chicago with all its manufacturing facilities, and its "white elephant municipal pier," has vanished as a port, and if anyone is so simple and so foolish as to even imagine that the building of a harbor such as Governor Craig desires, and is so insistent on, that party as well as the governor should spend a short time contemplating Chicago's condition as a lake port, as above set forth, and he would find it but a sort of repetition of Chicago's folly in the construction of its municipal pier.

So turning now to the plan suggested by Governor Craig, let us call his attention to the fact that there is no such stream as the Chicago River was to furnish docks, piers, warehouses, and grain elevators for shipping

to such a place as the cargo that would have to be reshipped by railroads, none of which are as yet anywhere near to such a harbor.

Then too he overlooks entirely the fact that the Chicago River furnished dockage for the 2,000 sailing vessels, as well as the railroad package carriers, and these required miles of docage not alone along the main stream, but on both the north and south branches of the Chicago River the city was able to provide such dockage by merely putting in landings along both banks of that stream.

Also no consideration has been given to the fact that were such a harbor constructed near the Burns Ditch, it would require constant dredging to keep the sand from piling up on the dock, which is a condition that prevails all along the Indiana and Michigan west shores.

If Indiana yearns for a harbor there is no place along its shores east of Gary other than Michigan City which has a wide river running back a mile or so from the lake along its banks could readily be constructed docks, warehouses and opportunities to transfer to the railroads and trucking lines that run through Michigan City all of the space required for shipping all of these fantastic cargoes to come from goodness only knows where either incoming or outgoing.

I think that your Government records show the amounts set aside each year for the dredging to keep clear from sand not alone Michigan City, but all of the ports along the west shores of Michigan itself, whose shipping of any kind is but almost negative save for the rail ferries and a few oil tankers from Michigan.

Michigan City has railroad facilities east, south, and west, as well as countrywide trucking systems, and it seems ridiculous to even think that shipping coming from the upper lake would bypass not alone Chicago and its South Chicago and Calumet Lake Harbor, to take the changes of running aground the drifting sands that now pile up out from the Burns Ditch, and such harbor when millions of Government money would be wasted on it, would turn out to be what Chicago's municipal pier is, which is the biggest hoax ever perpetrated on Chicago as the creation of a world harbor and port.

Even the airlines today are drawing from the railways thousands of tons of shipments, and we only have to look back a couple of years to see the manner in which our airplanes furnished thousands of tons of coal to Berlin despite the efforts of the Iron Curtain of Russia to prevent the same.

The passage of the legislation carrying into effect the Calumet-Sag Waterway is another reason for opposition to Governor Craig's ideas of a Burns Ditch Harbor.

It is needless for me to offer you any information regarding that legislation in which you have been so active and so successful, but it is my understanding that the port of Indiana Harbor will be connected with that stream that now furnished a harbor for that district. * * * The Calumet-Sag Channel will be joined to the Indiana Harbor River and its docks and harbor facilities, thereby withdrawing any hope of a Burns Ditch being available or even needed by Indiana. * * *

I hope that you may be able to present the opposition of your constituents and the thouands of Indianans who are also against any such follies as is sought by Governor Craig, and that he may realize that he can return to his Indiana homestead where:

"Through the sycamores the candle lights are shining,
On the banks of the Wabash far away."

And when he can dream away in peace his visions of such lights from a harbor on Lake Michigan where now the classic and picturesque dunes are sited and awake to find that they like his ideas in that regard are but dreams.

And so with my best regards, I remain, as ever,

Cordially yours,

JOHN A. BROWN.

School Man Opposes Federal Aid to Education Bill

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, I am inserting in the RECORD a letter from a friend and constituent, who is greatly disturbed over the possibility that the Congress may approve the Federal aid to education bill now pending. This man has been interested in schools for many years. He has been a teacher and has served as clerk of his local school district board. He has served as a member of a committee to study the local high-school situation where he lives. He is vehemently opposed to Federal interference and states that there is absolutely no need for such interference in local school districts of Wisconsin.

The membership of this House, Mr. Speaker, will be interested in the point of view expressed by my friend.

FEBRUARY 18, 1956.

LAWRENCE H. SMITH,
House of Representatives,
Washington, D. C.

DEAR LORRY: The prospects of the Federal Government entering the field of education in the form of financial aid for the construction of schools is a matter of deep concern to me and I am sure that most people who have given the question any serious study also feel that it would be a step in the wrong direction. Believing sincerely that the solution to our primary- and secondary-school problems does not lie in Federal intervention, I take this opportunity to convey to you some of my observations, based upon a good many years of interest in public schools, including past experience as a teacher, present membership on a district school board in Kenosha County, and serving on local committees and groups dealing with meeting the financial burdens not only of the building of adequate public schools, but also their expenses of operations.

What I have to say is all in opposition to the proposed Federal-aid program for financing new schools, based upon the following as some of my more important reasons:

1. It has not been shown that the States and their localities are not well able to finance themselves the costs of needed school facilities. The recent White House conference on education bears this out in one of the reports to the meeting which has been reported as saying, "No State represened has a demonstrated financial incapacity to build the schools it will need during the next 5 years. But, with the exception of a few States, none of the States presently has plans which indicate a political determination powerful enough to overcome all of the obstacles." In other words, this report would seem to imply that Federal aid should come not because of financial incapability but for lack of a sufficiently powerful political determination. The advocates of Federal intervention, therefore, hope to justify it on some fuzzy and weak concept of "political determination," while, at the same time, outwardly representing to the public through the press and otherwise that the States and their localities just are not financially able to provide all of the needed school facilities.

2. The costs of financing new school buildings are only a part of the problem. The increased annual costs of operations are even more important to consider, for certainly every added schoolroom means at least one new teacher, with all of the instruction, operating, and maintenance costs going along, and these in total are often many times the annual debt and interest costs arising from the construction of the school buildings. Therefore, if a locality is to be considered as too poor to build a new school, and therefore entitled to Federal financial aid, just what is going to be done about the much more burdensome operating costs? Will the Federal Government then be called upon for aid in costs of operations also, even though present advocates of Federal aid for construction only may say they do not contemplate any Federal participation in or control over the actual school operations? If the States and their localities are to stand the much greater burdens of the annual operating costs of our schools to be financed through annual tax levies, they can also bear the much lesser burdens of financing new school buildings and facilities. The old saying, "It is not the original cost, but the upkeep," certainly applies to schools as well as to other matters coming up in our daily lives.

3. In Wisconsin the debts of localities arising for school construction are normally paid off over a 20-year period, together with interest at rates which currently are low because of the tax-free income status for Federal purposes. Just recently the representative Wisconsin community, Waterford, in Racine County, has announced the issue of $400,000 in school bonds, maturing over a 20-year period at a 2½-percent rate, with the earlier maturities quoted on a basis to yield less than 2 percent. While all districts may not be as favorably situated as Waterford, there are few who do not now have sufficient borrowing limits to finance their needed school facilities and at reasonable rates of interest. Since the past year, because of a referendum passed by the voters of Wisconsin, all local school districts can now borrow up to 5 percent of the equalized value of all taxable property in the district. Previous to this amendment the debt limit was 5 percent of the assessed valuation, and, because of low assessed values in most districts in comparison to the full equalized values, many were unable under the law to borrow sufficient money to finance their needed building programs. The Wisconsin law now in effect on borrowing limits is generally believed to be adequate to meet all needs, since the equalized values used as a base are up to date and in line with the higher current going values for property.

4. Wisconsin laws now provide for State and county aids to elementary and secondary schools, but it is believed by many that they are inadequate and that in some districts the heavy tax load falling on local property should be relieved somewhat through increased State aids in varying amounts according to the local need as indicated by the ratio of school population to equalized property values or on some other equitable basis. This is a matter for consideration of our State legislature which will recognize, I am sure, that our State is well able to provide an adequate program of school aids through taxes levied on a State level. It is also believed that county aids can be increased to some extent to spread the tax load and afford relief to the harder hit local districts.

5. Should the Federal Government enter the field of financing public school construc-

tion costs, the substantial sums required would either further unbalance the Federal budget or result in increased taxes which of course the States and their localities would have to bear, but they would never receive back the full amounts taken from them as the added expense of another Federal bureau would first take off a big slice for payrollers who would be ever intent upon enlarging their activities and perpetuating themselves, with the result of there being created just one more Federal agency that would just go on and on forever.

There are many other good and sound arguments against the proposed Federal-aid program for schools, but none for it that I am aware of, except perhaps that it will no doubt be made a political issue with every legislator voting against it, stamped as an enemy of education and our public schools. In my experience with schools it has been very gratifying to meet so many intelligent and responsible people who are fully aware that education of our children is about the most important problem facing us and who are willing to give freely of their time to work it out. These people with the assistance of our entire State educational organization, are well capable of solving all of our school difficulties without assistance from Washington.

Why should this administration be maneuvered into adopting a Federal school-aid program for the States and their localities because of the demands of a small pressure group, when it is clear that there has not been demonstrated any lack of financial ability on the part of such States and their localities? This move certainly would be contrary to the basic principles of the Republican Party and to the 1952 platform where it was announced clearly that education is the function of the States. If it was a State function then it still is, for nothing has happened since 1952 to make the situation any different. A change in policy now can be interpreted only as a silly political move to attract a certain segment of votes.

It may require some courage on the part of the Members of Congress to resist and vote against Federal aid for school construction, but in meeting this situation they should keep in mind that most of the States as has been shown for Wisconsin, are fully able to provide all of the educational requirements of our children and we will do the job better and more economically, and also in the American way, if the Federal Government will just please stay out of it entirely.

Sincerely yours.

Harper's Answered

EXTENSION OF REMARKS
OF
HON. HAROLD O. LOVRE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. LOVRE. Mr. Speaker, I wish to place in the RECORD an article appearing as a letter to the editor in the Sioux Falls Daily Argus-Leader, Sioux Falls, S. Dak. This letter from a Wilmot, S. Dak., farmer answers the article in Harper's magazine which caused quite a stir in agricultural circles not too long ago. The letter follows:

HARPER'S ANSWERED

To the EDITOR OF THE ARGUS-LEADER:

You are to be commended for publishing the article which appeared in Harper's magazine by John Fisher. This article should be brought to the attention of every farmer in South Dakota; and, of course, Harper's doesn't have a large circulation in rural areas. I am going to make an effort to see that every farmer in Roberts County at least has an opportunity to read this. The reaction of any hard-working farmer after reading this article would be in language that isn't printable. If Mr. Fisher ever comes to South Dakota and the farmers find out about it, there will be a vacancy on the editorial staff of Harper's magazine. This man is, I believe, one of the editors of Harper's. What he doesn't know about farming conditions in the Middle West would make an immense volume. His viewpoint is merely that of the average person from the East only his is so badly distorted it should be ignored.

I am going to quote from his article. He says: "The farmers are being subsidized to produce millions of tons of food which we don't need, can't possibly use, and can't even give away." Just what commodity, Mr. Fisher, has won all our major wars? If he had been in our midwestern territory during World Wars I and II he would have seen men and women who should have been retired trying to do all the farm work so that their sons could fight for democracy. Again I quote: "At least 1 million farm families should be nudged off the land and helped to find some useful occupation." Just where, Mr. Fisher, would you put them? Statistics prove that the average age of farmers who would be removed from the land is 50 years. Just where would they go? Join the unemployed in your already overcrowded cities? The small farmer is still a very important part of our American way of life.

In closing, we extend a cordial invitation to Mr. Fisher to come to South Dakota. Then, if and when he gets back East, he will have an entirely different point of view.

ALEC MCDONALD.

WILMOT, S. DAK.

City to City Food Crusade

EXTENSION OF REMARKS
OF
HON. THURMOND CHATHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. CHATHAM. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I am pleased to include the story of the Winston-Salem to Karachi CARE food crusade which was cosponsored by the Winston-Salem Junior Chamber of Commerce and the Winston-Salem Junior Woman's Club. I am indeed proud of my fellow citizens, and I am happy to publicly recognize and herald the accomplishment.

THE STORY OF THE WINSTON-SALEM TO KARACHI CARE FOOD CRUSADE COSPONSORED BY THE WINSTON-SALEM JUNIOR CHAMBER OF COMMERCE AND THE WINSTON-SALEM JUNIOR WOMAN'S CLUB

THE CONCEPTION

The idea for the Winston-Salem to Karachi CARE food crusade was born at a meeting of the international relations committee of the Winston-Salem Junior Chamber of Commerce on August 7, 1955. It was inspired by having heard a spot announcement on the radio which said little more than CARE was sending United States Government surplus food (being stored at a cost to the taxpayer of a half million dollars a day) to countries in need of emergency food at a rate of 100 pounds for $1.

It seemed that this was a most worthy project which was going almost unnoticed by the American people. Previous personal experience with CARE inspired our complete confidence in this nonprofit organization, and we wished to call this program to the attention of our people with a money raising drive attended by some good publicity.

We decided we could best sell our campaign to our community by adopting some city overseas as the specific recipient of a gift from the city of Winston-Salem. We wrote immediately to CARE asking if they could arrange this city-to-city gift as sort of a special part of their food crusade.

Although gifts through CARE, under the food crusade, had not been retaining their identity, the CARE officials agreed that if a sufficient amount of money was raised, they would arrange for the Winston-Salem gift to retain its identity. They further assured our committee that they would supply Winston-Salem with publicity about its gift arriving in Karachi. This was to be the first such city-to-city campaign to take place in the United States.

CHOOSING THE CITY

We then asked CARE to name a city in the Orient most desperately in need of emergency food relief. It came as a surprise to us when the city of Karachi, Pakistan was named. We did not realize fully until later in what desperate status this city is, due to the combined effects of an increase in the population of the city from 350,000 in 1947 to 1,200,000 in 1955, and a series of droughts and floods in Pakistan which proved most disastrous to their food crop. The population increase of 850,000 in 8 years has largely been due to an influx of refugees from religious persecution from India, although a portion is also due to Karachi having been made the capital of Pakistan. The refugees are in a pathetic plight, living in city streets without even tents or beds, inadequately clothed, and having to live on a diet which allows on the average of 1 meal a day, or 1 meal every other day. This starvation diet, plus the floods carrying germs into neighboring villages, has caused a series of epidemics of tuberculosis, cholera, and dysentry in the city, which has killed many adults and children alike.

These factors, plus Pakistan's well-known loyalty to the United States, and firmly anti-Communist beliefs, made Karachi the one city really deserving of any help we could send her. We feel that a friend who has backed our country in all of its foreign endeavors to control communism, deserves our help when it needs us, rather than just when we need it.

EARLY PLANNING

We regret that the planning of the crusade was delayed several months by sickness in our clubs, by Winston-Salem's united fund drive which would not allow competition, and by conflicts of business matters of several key members of our committee.

At the end of November 1955, however, planning was again revived on a serious scale. A date for the drive was set for January 9, to February 6, 1956. An outline of events was prepared and a special crusade committee was set up to run the campaign. This committee consisted of a general chairman, and subchairmen in charge of publicity, solicitations, treasury, and a banquet which we planned for a date near the close of the crusade.

We felt sure that the only chance we stood of raising money was by soliciting from individuals. The businesses in the community had given all the money they intended to for the year to the united fund drive. Due to this drive which is based on the idea of having just one solicitation in the whole year for all of the local charities, a certain

hostility has built up in the community against all extra solicitations. To make our drive a success, we were going to have to contact and get our message across to every individual in the community.

The ideal way to accomplish this purpose would have been a door-to-door campaign, but in a city of 100,000 this would have been impossible for a club of 250 members. We therefore decided to concentrate on getting our message to groups in the community who themselves could help us in contacting the greatest number of individuals. We chose to work through the approximately 50 churches, 250 civic clubs, and the 25 parent-teachers associations in the community.

GETTING COSPONSOR

Since approximately half of our contacts were going to be to organization leaders who are women, we felt that we needed the support and help of one of the leading women's civic clubs. The Junior Woman's Club, which is the largest and hardest working of these clubs in Winston-Salem, was our choice. We therefore, offered them the position of cosponsoring the project.

At a meeting of the board of the Junior Woman's Club, their president presented a motion that they join with the junior chamber as cosponsors, and it was unanimously accepted. Henceforward, our two clubs acted as one on this project, and a cochairman from the Junior Woman's Club was added to the committee staff.

APPROVAL OF SOLICITATIONS COMMITTEE

The next step was to get the approval of our Winston-Salem public solicitations committee. This was applied for in December, but was not actually given until January 7, because of the fact that the board did not meet in December.

PUBLICITY

Plans for publicity were gotten underway at the end of December. Problems that had to be solved by our publicity committee were: Lack of knowledge on the part of most of our citizens of Karachi, Pakistan, and CARE and how it operates. A conference was held with each of the editors of our cities' two newspapers and plans were made for approximately 15 news stories of which 14 were printed.

During the campaign the chairman for the junior chamber was interviewed on television once and the chairman for the Junior Woman's Club was interviewed on radio once. A farm delegation from Pakistan which happened to be traveling through our territory was also interviewed on television. Spot announcements in support of the campaign were given on radio, television, and in the three city movie theaters at frequent intervals. Two maps, one of the world showing the relationship of Winston-Salem and Karachi to each other, and one of Pakistan was prepared by us for use on television.

Another method used to increase the interest of our city in Pakistan and Karachi was a program sponsored in our grade schools by the Junior Woman's Club. This was the studying of Pakistan in geography classes, and of making pictures during art periods of the life of American schoolchildren. Two hundred and fifty of these were sent with the money to CARE for distribution to schoolchildren in Karachi. Each picture bears the name and address of the Winston-Salem child who drew it, and it is hoped that children in Karachi will reply to them, and that many long-lasting friendships will be built up. The interest our children took in their studies of Pakistan and Karachi was very noticeable, and may, perhaps, have increased the interest of their parents.

SOLICITING

The job of soliciting was shared about equally between the junior chamber and the Junior Woman's Club. Methods used varied according to the type of organization being contacted.

At the beginning of the drive, a 3-page letter was sent to the presidents of each of the 250 civic clubs in Winson-Salem. A little over half of these were women's groups and, following the letters, were contacted personally by members of the Junior Woman's Club; the remainder by the junior chamber. The Junior Woman's Club, working through the Council of Church Women, also contacted approximately 175 women's church circles.

On January 9, 1956, members of the junior chamber spoke before a meeting of the Winston-Salem Association of Ministers. As a result, the association unanimously passed a resolution pledging the ministers to support the crusade, each according to the law and rules of his church. The solicitations committee worked with the ministers during the campaign, helping them with volunteer speakers and collectors to carry the crusade message to the congregations.

The Junior Woman's Club and the junior chamber jointly contacted, with speakers and collectors, all the parent-teacher associations in the city, and in all but a very few cases, their gifts were overwhelmingly generous.

The junior chamber also put out collection boxes and posters in the downtown business area. Of all the methods used to collect money, this proved to be the least successful.

DUTIES OF THE TREASURER

All the money collected was channeled through the office of the junior chamber where it was carefully counted and a list kept of the name of each donor. Every one of these donors received a letter of thanks at the end of the campaign.

The treasurer of the crusade collected the money from the junior chamber's office daily, rechecked the amount, and deposited it in a special account at a local bank. At the end of the drive, a cashier's check for the total amount of $3,138.15 was sent directly to CARE in New York City. At the rate of 100 pounds for $1 this amounted to 313,815 pounds. It seems to us most noteworthy, the small amount of money required to send enough food to feed a city for a considerable period of time.

BANQUET

As before indicated, it was decided early in the planning of the crusade to hold a banquet near the close of the campaign to highlight it, and, we hoped to celebrate its success. The Honorable Marshall C. Kurfees, mayor of Winston-Salem, proclaimed the week of January 22 to 28 as CARE Crusade for Karachi Week, and the date January 30 was selected for the banquet to close it out. The banquet was to be a regular membership meeting of both the junior chamber of commerce and the Junior Woman's Club, jointly; the first of its kind in the history of the two clubs.

We wanted to have a speaker for the dinner who could represent Pakistan and tell us a little of the Pakistani outlook. The first person who came to mind was His Excellency, Mr. Mohammed Ali, Ambassador of Pakistan to the United States. Mr. Ali had, until the fall of 1955, been the Premier of Pakistan, and had, following this, returned to the post of Ambassador to the United States which he had held before becoming Premier. The warmth and sincerity of his affection for the United States was well known, and we felt sure he would attend our dinner if he could.

On January 10, he sent a telegram of his acceptance, and shortly afterward wrote that he would be able to spend the whole day of January 30 in Winston-Salem. Plans were immediately made for his whole stay in our city. A leading citizen was chosen to act as official hostess representing our city, and a press interview, a television interview, and a complete tour of the city was arranged. Two breakfasts, a luncheon, as well as the evening banquet, were planned for him. In spite of his extremely busy schedule, he remained completely fresh and relaxed throughout the whole day.

SUBJECT OF ADDRESS

In his most vigorous address at the banquet, he expressed himself as warmly in favor of the strong stand against communism by our Government, and lashed out hard at those countries who, in trying to remain neutral in the life and death struggle between the "religion" of communism and the free and peaceful religions of the free world, were "committing an immoral act" by enjoying the benefits of the United States holding the Communists at bay, without actively supporting the United States policy.

He felt sure in his own mind that, if it were not for the United States great superiority in atomic weapons, Russia would have attacked the free world long ago. "God help the free world if this superiority is overcome," he said. He left little doubt in our minds that, as long as he had a place in his government, Pakistan would never fail to come immediately to the aid of the United States in any time of danger.

On the subject of religion he had a great deal to say. He devoted several minutes to explain the basic beliefs of his religion, the religion of Islam. When he was finished, we all felt that the Mohammedan and Christian religion had much in common and could well be happy to call each other brothers.

The strong belief of the people in Pakistan in the religion of Islam, he declared, would prevent them ever from turning to the false doctrines of communism as long as they were not driven out of their reasons by starvation. Only in countries where there has been a religious vacuum, he said, has communism made any headway. We note considerable truth in this statement.

On the subject of starvation, though, he had a grim word to say. The food situation in both East and West Pakistan is extremely bad, especially in the densely populated areas, due to the recent severe floods in both parts of his country. He confirmed what we had heard about hundreds of thousands of people having to live on an average of one meal every other day, and of epidemics, brought by floodwaters contaminating the water supply, and threatening the lives of the whole population.

He had the highest praise, however, for the way the United States has come to the aid of his country in these times of crises, and we were very touched by the warmth and sincerity of his thanks for our modest contribution.

We were genuinely sorry to have to say goodbye to him when he left on his early morning flight back to Washington to greet Sir Anthony Eden, a duty which he had delayed a day in order to make his visit to us.

CLOSING OUT THE CAMPAIGN

During the day of the banquet we had to announce to the community that we were being forced to extend the closing date of our drive from February 3, to February 15, 1956, because the job of making all our contacts was taking longer than we had expected. Many clubs simply did not hold meetings other than every 2 months or 6 weeks, and were not holding one at which they could collect donations until the second week in February. We found that it is impossible to wind up a drive of this nature in just 1 week.

On February 16, 1956, a cashier's check for $3,138.15, the total amount collected during the drive, was sent to CARE.

CONCLUSION

We are hoping that our Ambassador to Pakistan, the Honorable Horace A. Hildreth, will arrange on our behalf, a small ceremony with the mayor of Karachi, the Honorable Bagh Ali, presenting to him a letter telling of the sincerest best wishes of the people of Winston-Salem for his country's

and his city's future; the letter to be written by the Honorable Marshall C. Kurfees, mayor of Winston-Salem.

We further hope that newspapers in Karachi will carry our story, to their people so that they will know of our gift, and of our desire to be of help to them in this time of need. Our only regret is that our resources are so limited that we cannot help all of the most deserving people in both East and West Pakistan. It is our greatest wish that the people of this small, but gallant country, will understand our gesture and the great feeling of good will with which it was made. We hope that, in this day of a world growing increasingly smaller, that we have made friends among our new neighbors to the East.

We further hope that newspapers in our country will carry our story to other communities in our Nation and give them inspiration to follow our example. It is a type of campaign that is easily adopted to any community, and not at all too difficult for any civic minded group to carry out. This is really a great and noble project that our Government is helping CARE to conduct; it is worthy of the fullest support of every person in the United States. May this first city to city food crusade not be the last.

The Threat to Civil Liberties

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. DAVIS of Georgia. Mr. Speaker, the Wall Street Journal on last Thursday, February 23, under the caption "Review and Outlook," carried a sound and sensible article under the heading "The Threat to Civil Liberties."

The article was in answer to a letter printed on the same page from two officials of that radical outfit, The American Civil Liberties Union.

The Civil Liberties Union letter was a continuation of an attack upon the Senate Eastland committee, in keeping with the usual and customary practice of the Civil Liberties Union in defending supporters of communism and attacking opponents of communism.

I insert herewith the article under Review and Outlook, and immediately following it the letter which occasioned the article:

REVIEW AND OUTLOOK—THE THREAT TO CIVIL LIBERTIES

On this page today is a letter from the American Civil Liberties Union and its New York affiliate which says that this newspaper is "not sufficiently alert to the threat to civil liberties" when Senators question newspapermen about past and present Communist affiliations.

Mr. Malin and Mr. Rundquist agree with us that it would be bad if Communists on American newspapers ever reached the point, either through numbers or power, of control over the presentation of news. But they think that until there is some evidence that the content of newspapers is a danger, Congress has no right to investigate individual newspapermen and newspapers.

The ACLU officials take comfort for their views from the Federal court of appeals rule in the Watkins case. In a 2 to 1 decision on January 26 the court overruled the conviction for contempt of Congress of John T. Watkins, a labor leader, who refused in 1954 to identify Communists in the union he headed. The court said the committee which cited Mr. Watkins was not pursuing a "valid legislative purpose" in its questions.

Frankly, we don't know what the court means when it says there was no valid legislative purpose in such questions, unless it means that every time a committee of Congress holds a hearing Congress ought to pass a law. But that is not the only purpose of the power of Congress to investigate in pursuit of legislation. Sometimes hearings serve the purpose of showing that no new laws are needed.

In any event, the 2–1 ruling last month of the court of appeals is not the last word on the subject. The court Monday set aside the earlier three-judge decision and the Watkins' case will be reheard by all eight members of the court. They—or the Supreme Court—may, well reason that Congress has a right to ask responsible questions and that, unless the witness invokes the fifth amendment's protection against self-incrimination, the Congress has the right to require an answer.

We do not see how it can be otherwise. The Supreme Court has held that communism represents a "clear and present danger." The rule upheld legislation by Congress which resulted from evidence gathered in hearings by questions asked by Congressmen. The Senate Internal Security Subcommittee was created to look into dangers to the Nation's security from subversive forces, such as communism.

Is the Senate—or the House—to look only in certain places and not in others for Communist intrigue? Should newspapermen enjoy some special privilege which exempts them from questioning about communism? If the answer to those questions is an unqualified "Yes," would not the result be to create sanctuaries for communism?

And if the answer is, as the ACLU suggests, that Congress should question no newspaperman about communism until there is some evidence that the content of newspapers is a danger, isn't that like saying than a man should not put a lock on the house until there is evidence that he has been robbed?

We certainly don't agree with that. And apparently neither do the newspapers whose employees refused to answer questions put to them by the Senate subcommittee. Those newspapers fired the men.

It is true that the first amendment forbids Congress to make laws affecting freedom of the press or of speech. But the Senators are not attacking press freedom when they subpena newspapermen to testify about communism. What they are after is to ascertain the extent of the Communist plot whether in government, or in the schools, or in the newspapers.

The letter from Mr. Malin and Mr. Rundquiest mentions the need for an informed citizenry. Exactly. We think the more the public knows about who the Communists are, where they are, and what they are doing, the more likely the public is to understand the nature of the Communist design.

If we are not sufficiently alert to suit the ACLU, it is because we do not believe any threat to civil liberties exists in asking newspapermen or anybody else to testify about communism.

But we are alert to communism, and communism represents the greatest threat to civil liberties that exists anywhere the ACLU cares to look.

LETTERS TO THE EDITOR—PLAGUE OF CONFORMITY

EDITOR, THE WALL STREET JOURNAL:

While your paper is generally a stalwart defender of civil liberties, we believe that your editorial of January 9 criticizing the position taken by the American Civil Liberties Union and its New York affiliate on the Eastland committee newspaper investigation is not sufficiently alert to the threat to civil liberties in such investigations.

We agree with your argument that it would be dangerous for this country if Communists on newspapers pressured some great question of national import into channels of their own design. But, as you point out, we are far from any such danger. Our argument is that unless there is some evidence that the content of the newspapers is a danger, a legislative committee should not investigate individual newspapermen and newspapers. It cannot investigate merely for the sake of exposing individuals or papers: The Constitution does not give the legislature any such power—as a United States court of appeals has just made crystal clear in the Watkins case.

By questioning newspapermen about their associations when there was no evidence of danger from their newspaper work, the Eastland committee acted as though the work record of these men was unimportant, and as though writings should be accepted as good or bad depending on who wrote them. This approach is largely responsible for the conformity that has plagued our country today in this period of security tension. It is a pressure toward a blind acceptance or rejection of ideas depending on whether they are uttered by an approved authority, and it discourages consideration of ideas on their merits and a free and fearless debate of various points of view. And by creating the suspicion that our newspapers are Communist-slanted, the Eastland committee is also discouraging our citizenry from informing itself and keeping alert to the issues of the day.

PATRICK MURPHY MALIN,
Executive Director.
GEORGE E. RUNDQUIST,
Executive Director, New York Civil Liberties Union.
NEW YORK CITY.

Application of Federal Tax Laws in the Possessions of the United States

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. SIEMINSKI. Mr. Speaker, under leave to extend my remarks, I should like to cite a study prepared for me by the Library of Congress on the application of our Federal tax laws in the possessions of the United States. I think it will be of interest to the House.

The study follows:

APPLICATION OF FEDERAL TAX LAWS IN THE POSSESSIONS OF THE UNITED STATES

There is some variation in the application of Federal internal revenue laws in the Territories and possessions of the United States. The tax relationships between this country and some of its more important possessions are briefly described below:

PUERTO RICO

In general, the internal revenue laws of the United States do not apply in Puerto Rico. This principle was originally set forth in the Foraker Act (the Organic Act of 1900) [1] and the Organic Act of 1917.[2] The

Footnotes at end of speech.

law today provides that Puerto Ricans are exempt from Federal income taxes. The only exception to this rule is that income received from the United States, such as that received as an employee of the Federal Government, is subject to Federal taxation.[3] Puerto Rican products shipped to the mainland of the United States are taxed in the same way as products of domestic manufacture, but the revenue derived from this source is turned over to the treasury of Puerto Rico.[4]

VIRGIN ISLANDS

The income tax laws in force in the United States apply also to citizens of the Virgin Islands. The proceeds from such taxes, however, are paid into the treasury of the Virgin Islands.[5] As in Puerto Rico, articles shipped to the United States are subject to taxation, but these receipts are also turned over to the government of the Virgin Islands.[6] Other taxes levied in the islands by the United States Government, such as quarantine, naturalization, immigration, and passport fees, are also reserved for the local treasury.[7]

GUAM

Under the provisions of the Organic Act of Guam enacted in 1950, residents of Guam are subject to Federal income taxes.[8] Again, the revenues from income taxes, customs duties levied on articles shipped to the United States and from quarantine, passport, immigration, and naturalization fees are returned to the treasury of Guam.[9]

HAWAII AND ALASKA

The Territories of Alaska and Hawaii are treated somewhat differently with respect to Federal taxation. They are subject to the same internal revenue laws as are any of the 48 States.[10] Unlike Puerto Rico, the Virgin Islands, and Guam, the amount collected under these laws is not returned to the Territorial treasuries, but is paid directly into the Federal Treasury. In the fiscal year 1945, the Federal Government received $44,537,000 from Alaska and $126,340,000 from Hawaii in internal-revenue collections.

The principle of "no taxation without representation" has been advanced by some as the reason for the practice of returning taxes collected to the local treasuries of Puero Rico, the Virgin Islands, and Guam. This principle, however, does not fully explain the tax advantage enjoyed by these three possessions over Alaska and Hawaii. It is true that Alaska and Hawaii do enjoy greater representation than the Virgin Islands and Guam in that they are represented in the United States Congress by a Delegate. Puerto Rico, however, which pays no Federal taxes, is also represented in Congress by a Resident Commissioner. While these three representatives may introduce bills and participate in committee and House debates, they do not exercise any vote, either in the committees or on the House floor.

It should be pointed out that the Federal Government does return a portion of Federal taxes received to Alaska and Hawaii in the form of various grants-in-aid. However, while Guam receives no grants-in-aid and the Virgin Islands receive a very small amount, Puerto Rico receives more than all of the Territories and possessions combined. This is borne out by the following statistics for the fiscal year 1954:[11]

Grants-in-aid received

Puerto Rico	$55,018,868
Hawaii	29,038,862
Alaska	11,232,846
Virgin Islands	793,061

A more significant reason for the more favorable tax treatment accorded Puerto Rico, the Virgin Islands, and Guam is that returning these revenues represents an effort to improve the general economic well-being of these possessions. While recent economic data are relatively scarce, some idea of their comparative economic condition may be given from the following statistics on median income of persons receiving income reported by the Bureau of the Census for 1950:

Median income

Alaska	$2,072
Hawaii	2,728
Puerto Rico	378
Virgin Islands (St. John Island only)	579
Guam	(1)

[1] Not reported.

Junior Good Will Dinner Sponsored by Massachusetts Committee of Catholics, Protestants, and Jews

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1956

Mr. McCORMACK. Mr. Speaker, on February 1, 1956, there was conducted in Boston the junior good will dinner of the Massachusetts Committee of Catholics, Protestants, and Jews. This committee, of which I am proud to be a member, includes outstanding citizens of Greater Boston and of Massachusetts, of all creeds, color, and of all racial origins. The Massachusetts Committee of Catholics, Protestants, and Jews was organized in October 1936 for the purpose of bringing a greater understanding among our people, for it must always be remembered that we are a people and not a race.

The dinner held on February 1 was the fifth annual junior good will dinner sponsored by the above committee, and on the occasion of this year's dinner, it was in cooperation with the Boston Red Sox and Hon. John B. Hynes, mayor of Boston.

I am very proud to be a member of the Massachusetts Committee of Catholics, Protestants, and Jews, and to be associated with the fine public-spirited gentlemen who are members of the committee.

It is very interesting to note that the junior good will dinner is different from anything held anywhere in the country due to the fact that it was conceived 5 years ago by Hon. Michael T. Kelleher, vice chairman of the Massachusetts Committee of Catholics, Protestants, and Jews, whose one thought was that in bringing boys together from all the public and parochial high schools of Boston, and have them sit with the leaders of our community, it would be a great contribution in obtaining the confidence of these young men and to help them develop an understanding of what is expected of them as future good citizens, and to enable them to realize that they should be ready to assume leadership in the community. In addition, that such dinners would contribute greatly to breaking down juvenile delinquency.

This program—the junior good will dinner—might well be carried out in other cities and communities throughout the country. During the 5 years' existence of these dinners they have done a great deal of good in Greater Boston. It is a known fact that not one of the boys who have attended these dinners—at least 600 during the past several years—has ever been involved in any matter which could be classified as delinquency.

In conducting these dinners the committee has had the cooperation of the mayor of Boston, Hon. John B. Hynes, also the support and cooperation of the archdiocesan superintendent of schools in the archdiocese of Boston, also the superintendent of the public school system of Boston. From its very inception Rt. Rev. Msgr. Timothy F. O'Leary archdiocesan superintendent of parochial schools, has made the selection of young men from the parochial schools who will attend the dinner, and Mr. D. Leo Daley, assistant superintendent of the public schools of Boston, the selection of the boys from the public high schools.

There is a real human relation story involved in these dinners that I am sure will be of interest to others throughout the country.

I might also say that the leading figure in the success of the Massachusetts Committee Catholics, Protestants, and Jews—a great American organization—and of the junior good will dinners conducted by this committee, is the secretary, Mr. Ben G. Shapiro who, throughout the years, has given untiringly of his efforts to bring about a better understanding among the people of Greater Boston and of Massachusetts.

It is also an important fact that the committee is a separate and independent one, without any paid workers of any kind whatsoever, and that all of this work is done voluntarily. It is also interesting to note that this Massachusetts Committee Catholics, Protestants, and Jews is thoroughly appreciated by the people of Greater Boston and of Massachusetts, and that the great work of understanding among our people that they have done and are doing is thoroughly appreciated.

On the occasion of the junior good will dinner on February 1, 1956, four young men from parochial high schools and public high schools, made addresses:

First. Ronald Janey, who is a member and president of the senior class of

Brighton High School, of the Brighton section of Boston, Mass.

Second. John M. Regan, a senior at the Mission High School of the Roxbury section of Boston, Mass.

Third. Kenneth W. McAuley, IV Z–31, Boston Technical High School, Boston, Mass.

Fourth. Felix E. Smith, of the Roxbury Memorial High School—boys of the Roxbury section of Boston, Mass.

I include, with pleasure, in my extension, the well-prepared remarks made by these four young men at the junior good will dinner.

I also include, in my extension, an article written by Paul Ganley, which appeared in the Boston Traveler of January 31, 1956.

If the extension of these remarks arouse the interest of persons in other sections of the country who may desire information for the purpose of determining whether or not such dinners should be conducted in their communities, I suggest that they communicate with Mr. Ben G. Shapiro, 286 Congress Street, Boston, Mass.

TALK GIVEN BY RONALD JANEY, MEMBER OF THE SENIOR CLASS, BRIGHTON HIGH SCHOOL, AT THE GOOD WILL DINNER ON FEBRUARY 1, 1956

After 3 years of competition in the various high school sports I have at last become aware of the underlying significance of any athletic contest. From my participation, I have learned many things.

First, I now realize the importance of conforming to the rules. Imagine, for instance, a football game being played without benefit of coaching, or carefully thought out rules. Suppose there were no restrictions as to tackling, ruffing the kicker, pushing or punching an opponent. Why, it is almost impossible to describe the chaos that would result. A field of play would become a field of combat, and the players almost like Roman gladiators, fighting to the death. Almost any other game I could mention—baseball, basketball, hockey or soccer—would produce the very same result, if they were not played in accordance with the rules.

Second, I have come to appreciate the full value of concerted effort. After a football player has scored a touchdown, the jubilant cheers and admiration of excited spectators bring to him an almost indescribable feeling of joy and well being. It is the wise and humble fellow who, hearing them, realizes it was the quarterback who called the scoring play, the center and guards who opened a huge gap in the line, the tackles and ends who threw key blocks, and that every act in itself was a part of that touchdown.

Without his interference, Clarence Peaks could not have made his many spectacular runs for Michigan State in the Rose Bowl game this year. Howard Cassady from Ohio State could not be the outstanding player he is had he not had the help of the other players.

Third, I now realize the qualities needed in a true sportsman. To a true sportsman the race, creed or color of an adversary is unimportant. He respects the ability of his opponent in itself, for there is no correlation between the religion a man upholds and his athletic achievement.

These three lessons, brought out and intensified my participation in sports, will serve me well throughout life. If I abide by the discipline, the team spirit, the tolerance, which characterize a game in the sports world, I shall do my part in making this a better world for all.

May God and good will serve as a beacon, and continue to guide the thoughts of the leaders of our Nation, the youth of our Nation, and every American citizen.

TALK BY JOHN M. REGAN, SENIOR AT MISSION HIGH SCHOOL, ROXBURY, AT JUNIOR GOOD WILL DINNER OF MASSACHUSETTS COMMITTEE CATHOLICS, PROTESTANTS, AND JEWS, FEBRUARY 1, 1956

Glancing around me tonight, I see a group of men gathered in an atmosphere of universal friendship, each with his individual religious beliefs. Catholics, Protestants, and Jews, each separated by the singular dictates of his own conviction but strongly united by mutual understanding and mutual respect. This application of charity, the universal love of one's fellowman, has long been the espoused cause of religious leaders. It is the cause championed by every God-fearing man. Our very presence in this building tonight is living proof that America, your country and mine, has taken into her heart and fully realized the importance of the commands of God.

We all recognize these 10 precepts of the Almighty. We each attend our own place of worship, there to give honor to the Father of all men. And we realize, full well, our relationship with our fellowmen, referring to that unity as the brotherhood of man, the activation of fraternal charity.

The United States has come a long way on the obstacle-marked road that leads to universal harmony and understanding. Seldom do men enter public life in trepidation, fearing that they will be slandered because of their religious convictions. Gone are the days when many Americans, by their deeds, gave lie to the basic principles of humanity. The professions have opened to freely admit members of all creeds and religion now is to be held in high esteem by the vast multitude of American citizens.

Today our Government with its variety of men possessing different beliefs is truly the Government of the people. Each official by his practice of a religion, proves that the rebirth of spiritual fervor in our country is not momentary. And with our increased interests in things supernatural comes the thought that all of us are children of God, brothers equal to one another.

But brotherhood is not new in America. Every religion had its distinguished representatives fighting for freedom during the Revolution. Both our Declaration of Independence and the Constitution of the United States recognize the equality of man under God.

America has always realized the importance of minorities, whether they be religious or political. Before the entire world, our deeds aimed at freeing men from the bonds of bigotry have proven the sincerity of our motivations. Yes, the United States has thrown open before the eyes of the world each separate portal of prejudice.

Not in America do the inhuman tactics of a dictator give constant lie to his beguiling words. God knows that our Government has done its utmost to help the individual.

Our Nation is free and strong, mainly because of its belief that all men are created equal. Let us consider our country and ourselves well tonight, for such is the time and place for thought. Look about you. See your fellow Americans, each of varying beliefs, yet all united in the same thought, the tenet that brings us here together, man's universal brotherhood.

Because of this belief, that famed Nation "under God, indivisible, with liberty and justice for all shall not perish from the earth."

TALK BY KENNETH W. MCAULEY, IV Z–31, BOSTON TECHNICAL HIGH SCHOOL, AT THE JUNIOR GOOD WILL DINNER, FEBRUARY 1, 1956, AT FENWAY PARK, MASSACHUSETTS COMMITTEE, CATHOLICS, PROTESTANTS, AND JEWS

Thank you, sir.

Reverend Clergy, Your Honor, distinguished guests, and brethren, first, I would like to take the opportunity to thank the committee for inviting us to its fifth annual junior good will dinner, and to tell you, if I can, just what it means to me to be here with you tonight—

1. It is a boy's dream of pitching a no-hitter.

2. It is a boy's dream of collecting the reward.

3. It is a boy's dream of brotherhood.

And it is for me truly the thrill that comes once in a lifetime.

I was fortunate to have been born and raised in a so-called melting-pot section. I attend one of the largest central high schools in the East. I go to church, I have a job, and I belong to a club. I play ball—foot, basket, and base. I know all colors, all races, and all creeds as my neighbors and as my friends. We boys in the West End have played together, worked together, gone to school together; we have fought; we have forgiven. Sometimes we have won and sometimes we have lost; but the important thing, gentlemen, is that what we have done we have done together.

I remember that once I was prejudiced. It was a common prejudice. I don't know where it sprang from, but somehow or other I found myself growing up with a hatred—a real, genuine dislike. I did not like spinach. I never tasted it, but, as young as I was, I knew that no self-respecting 9-year-old would have anything to do with the despised leaf. The spinach growers of America found themselves with quite a problem. To solve it, they didn't force it upon us, they didn't change the color, they didn't put it in a pretty package, and they didn't call it by any other name. No; they invented "Popeye."

As I have grown older and a little wiser, I hope I have come to realize that the planned effort of your committee to bring the boys and men of our community together in comradeship and good will at these annual dinners is having its desired effect in the youth of Boston. After sitting down to a good meal—after shaking hands with Joe Cronin—what boy would not stand up for the idea of brotherhood?

Someday I hope to become an aeronautical engineer. I know that I shall have to depend on the cooperation and good will of my fellow man in order to achieve my station in life. As a student of science, I have learned that Galileo, a Catholic, introduced the laws of falling bodies; that Newton, a Protestant, discovered the laws of mechanics; and that Hertz, a Jew, discovered the laws that govern radio waves. The people today who use the information of these three gentlemen are those on all four corners of the earth. I know that life today depends on the good will and cooperation of every man. I know that we are challenged to live together and to team together. Gentlemen, you have given us the ball. You have shown us the goal. We will not let you down.

SPEECH OF FELIX E. SMITH OF THE ROXBURY MEMORIAL HIGH SCHOOL (BOYS) AT THE JUNIOR GOOD WILL DINNER OF THE MASSACHUSETTS COMMITTEE CATHOLICS, PROTESTANTS, AND JEWS, FEBRUARY 1, 1956

Recently, I heard a story that filled me with high inspiration. It was told by a guest speaker to a group of people all of whom must have been awakened to the most cher-

ished principle of our democracy. I remember distinctly that the tears welled in the eyes of the speaker as he related the effects of the tragic events of World War II. He told us that he was torn from the roots of his homeland, and driven to many strange European cities; that he witnessed the unmerciful killings of many of his relatives; and, finally, of the answer to his earnest prayers when from the deck of a ship he saw in the distance the torch in the hand of the Statue of Liberty in New York Harbor. The stirring effects of his magnificent speech were not fully realized until he uttered his final phrase. "My most precious possession in this world is my citizenship in the United States of America."

Fellow Americans, I wonder how many of us who have been fortunate to have escaped such tragedy in life by our birth in these United States appreciate fully this precious privilege of citizenship. Each of us may ask himself, "What do I mean when I refer to this word citizenship?" To me citizenship can be conceived in similarity to the largest and deepest ocean, for it embraces all facets of our way of life. It doesn't mean merely that we assume the responsibility of voting. It means that we pledge allegiance to our Government; that we belong, and thus make every effort to govern our lives in a democratic spirit. It is a patriotic feeling, a feeling that suggests the grandeur of our democracy. As every worthy ideal needs cultivating, so too does citizenship. How can this be done? I believe, first of all, by acquiring an infinite knowledge of the history of our country, especially striving to gain an interpretation of the Constitution of the United States with respect to its basic fundamentals, that of the sacred rights of the individual, and the benefits which the Constitution guarantees us. Secondly, we should become aware of an appreciation of these benefits. Among these not only our privileges, but our responsibilities. To me it means specifically that we may fully understand the privileges of the ballot; its great power for good, and its great power for evil, which power if neglected can place our country in jeopardy. Underlying this realization we should carry with us the feeling of our Founding Fathers a little over 179 years ago when 56 of them pledged their lives, their fortunes, and their sacred honor to preserve the cause of liberty.

Therefore, in our role of good citizens we should instill in our minds that the United States of America is a land for every race, creed, and nationality, a land under the Stars and Stripes, a symbol established by blood and preserved for peace in this land of liberty. It is one Nation indivisible, under God, a land where the Government of the people, by the people, and for the people shall not perish.

[From the Boston Traveler of January 31, 1956]

HAND OF BROTHERHOOD—YOUNG, OLD TO GATHER TOMORROW IN FIFTH ANNUAL GOOD WILL DINNER

(By Paul Ganley)

Some of the city's most successful men will break bread with 150 Greater Boston high-school boys tomorrow.

The occasion will be the fifth annual junior good will dinner at Fenway Park sponsored by the Massachusetts Committee of Catholics, Protestants, and Jews.

Boys from all walks of life will chat with men in the top echelons of Boston's civic, business, and professional ranks in an atmosphere of brotherhood and neighborliness.

A special treat for the boys will be the presentation of a citation to Tom Yawkey, Red Sox owner, for his personal example of sportsmanship, democracy, and fair play.

No boy who has attended these banquets has ever run afoul of the law. This phenomenal record stems from an idea born in 1933.

At that time Ben G. Shapiro, of Brookline, now secretary of the Massachusetts Committee of Catholics, Protestants, and Jews entertain a group of Universalists.

In the course of events Shapiro told a friend, "Men get to know each other better as individuals when they sit down and break bread together."

He enthusiastically worked to further the idea and, later, the Massachusetts Committee of Catholics, Protestants, and Jews was formed.

ALL WORKERS VOLUNTEERS

The group of dedicated men worked to create a spirit of neighborliness and among men. All the workers are volunteers. None are paid for their services.

In 1936 the group held its first annual dinner honoring persons who set an example of brotherhood in community work.

The first citations went to the late Cardinal O'Connell, Rabbi Harry Levi, and Myron C. Taylor, who served as special Ambassador to the Vatican under President Roosevelt.

Last year's honors went to Jack Benny, Maryland's Governor, Theodore R. McKeldin, and Gen. Walter Bedell Smith.

The committee has also raised funds from members for a variety of worthy projects. Educational institutions have received thousands of dollars for the development of understanding and brotherhood.

DINNER SET 5 YEARS AGO

Then, 5 years ago, Michael T. Kelleher, former fire commissioner, and Joe Cronin developed the idea of holding an annual informal dinner at which boys would meet top-flight men. Thus the junior good will dinner was started.

Kelleher won't be at the dinner this year since he is on a world tour for the National Catholic Welfare Association and the United Defense Fund.

At the dinner, four Greater Boston high-school students will speak on what good citizenship means to them.

They will be John M. Regan, of Mission High School, Roxbury; Ronald Janey, of Brighton High School; Kenneth W. MacAuley, of Boston Technical High School; and Felix E. Smith, of Roxbury Memorial High School.

ONE HUNDRED DOLLAR AWARD FOR ESSAY

The committee will later award a $100 bond in honor of the late Harry Agganis to the student who writes the best essay on good citizenship after attending the banquet.

The boys will be especially thrilled by the dinner in the Red Sox press headquarters in the light of Joe Cronin's recent election to the Baseball Hall of Fame, says Ben Shapiro.

D. Leo Daley, assistant superintendent of Boston schools, and Rt. Rev. Msgr. Timothy F. O'Leary, diocesan superintendent of parochial schools, head a committee selecting the boys to be guests at the dinner.

CIVIC HEADS TO ATTEND

John I. Ahern will serve as master of ceremonies. The committee on arrangements includes: Ahern, Sidney R. Rabb, Thomas A. Pappas, H. D. Hodgkinson, Ben G. Shapiro, Ralph M. Eastman, and Joseph McKenney.

Outstanding civic, business, and community leaders who are members of the Massachusetts Committee of Catholics, Protestants, and Jews will act as hosts to the students.

They will include Registrar of Motor Vehicles Rudolph King, Sidney Rabb, H. D. Hodgkinson, Thomas A. Pappas, John I. Ahern, Joseph Kaplan, Paul T. Rothwell, Harry J. Blake, Walter F. Downey, and Thomas Dignan.

Also Joseph M. Linsey, John A. Volpe, Attorney Garrett H. Byrne, Walter A. Brown, Ralph Lowell, Edward W. Brooke, M. H. O'Connell, D. Leo Daley, Rt. Rev. Timothy O'Leary, and George Wiswell.

Other Nations Hold Claims on More Than Half of the Gold at Fort Knox

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. ENGLE. Mr. Speaker, the U. S. News & World Report in an article in the February 24 issue, emphasizes the fact that the gold supplies of this country are growing dangerously short. This article points up these facts:

Three years ago United States gold reserve totaled $23.3 billion.

Now United States gold reserve is down to $21.8 billion.

Other nations hold claims against United States gold totaling $13.8 billion.

So, in an emergency, there is left available for United States needs, a gold reserve of $8.0 billion.

To back our currency and bank deposits, the United States needs a gold reserve of $12.0 billion.

In other words, we are $4.0 billion short now and the United States could get into a tight gold-supply position if foreign countries would decide to withdraw the gold reserves on which they hold claims.

The article further emphasizes how the United States speeds flow of gold to Europe. Last year Europe earned $5.6 billion from sales to the United States. Additionally, Europe was given $1.1 billion in United States aid and private gifts; therefore the total dollar income from the United States to Europe was $6.7 billion. Europe spent $5.6 billion in dollars for United States goods and services. This left a balance of dollars redeemable in United States gold of $1.1 billion. Thus, the $1.1 billion of United States aid in 1955 was not needed to cover Europe's dollar expenditures. So it increased the claim that Europe can make against the United States gold supply. The full text of the article is as follows:

WHO OWNS THE GOLD AT FORT KNOX?—OTHER NATIONS HOLD CLAIMS FOR $13.8 BILLION

The United States, which is used to thinking of itself as having an abundance of gold, now finds that, in an emergency, it could be caught short.

Foreigners actually could drain away more than half the gold in Government hands, including the huge hoard at Fort Knox, Ky.

That would mean less gold backing for the paper money people use.

Such a heavy drain is not likely to develop under present conditions, officials say. Here is the situation that makes it possible, however, if conditions in the world should change for the worse.

GOLD IN HOCK

The United States now holds $21.8 billion worth of gold, far more than any other country. The pile seems big enough to inspire confidence.

On closer study, however, it appears that $13.8 billion of the gold is in hock. Foreign governments and firms have that much in business claims and United States dollars which they can exchange for gold at any time. These claims on United States gold are officially known as short-term liabilities of the United States.

That leaves $8 billion of United States gold, free of all claims.

However, the law requires $12 billion of gold backing for United States money, figured on the basis of $25 gold for every $100 of currency in the form of Federal Reserve notes and deposits in Federal Reserve banks.

Thus, if foreigners were to claim all the gold they are entitled to, the United States would be short of meeting the legal requirement by $4 billion.

There are amounts owed to United States business by other countries, but these total only 1.4 billions. There is no assurance they would be used to reduce the gold loss.

WHEN UNITED STATES WAS RICHER

A few years ago, there was not even a remote danger of an emergency. The United States emerged from World War II with enough gold to take care of the foreign claims, and to provide backing for United States money, with 2 billions of gold to spare.

In foreign circles there was a suggestion that the United States should divide some of it up among its allies.

Britain's foreign secretary, Ernest Bevin, said the United States should redistribute some of the gold in Fort Knox.

The Bevin proposal was rejected by the United States Treasury as preposterous. Now, it is becoming clear that a sharing of gold was in the making even then, through the means of foreign aid.

That was not apparent in the first few years of the aid programs, however. United States supply of gold reached a peak of 24.6 billions in 1949. Thereafter it shrank to less than 22 billions.

Meanwhile, foreign holdings of dollars and other short-term claims against the United States have grown rapidly.

WHY GOLD GOES ABROAD

Ordinarily such a flow of gold and dollars would mean that the United States was unable to sell enough in world markets to pay for goods and services obtained there. This, of course, is not the case. The United States consistently sells more than it buys.

The explanation for the flow of gold and dollars lies in foreign aid, as the chart on page 31 indicates.

In 1955 Western Europe made just about enough in its trade with the United States to pay its own way. In addition, the Europeans got more than 800 millions in help from the United States Government and nearly 300 millions in gifts from generous Americans.

Eventually most of those dollars wound up in European bank accounts as possible claims on United States gold.

Officials point out that most of the Government grants to Europe are for military equipment and supplies. In many cases weapons are bought by the United States in one country and given to another for its armed forces. The country making the weapons gets the dollars.

WELL-HEELED NATIONS

Thanks to such transactions, on top of booming trade, many West European treasuries today are in good shape. That is the chief reason why some Congressmen are questioning the need for continuing to give aid to Europe.

However, officials point out that all foreign countries have not been equally fortunate in building holdings of United States dollars or gold.

For instance, Britain and Denmark have been losing some of these reserves during the past year. Cutting off aid would hurt them, as well as the big gainers.

Among the countries that have large credits that could be changed into United States gold are Western Germany with more than 1.4 billion, France and Canada with more than a billion each, Japan with nearly a billion, and Switzerland and Italy with more than three-fourths of a billion each.

Britain's holdings of gold and dollars are given officially as 2.1 billions. However, a large part of this is in gold already. Only 645 millions is listed publicly as dollar claims.

HOW UPSET COULD COME

The feeling in official circles is that these foreign countries will not demand any large amount of United States gold under present conditions. But foreign interest in gold could be aroused in several ways.

A strong suspicion that the United States planned to increase the price of gold above the present $35 per ounce could cause a rush to exchange paper money for hard metal. The United States, after maintaining very nearly the same price of gold for nearly 140 years, from the time of President Washington, raised the price in 1934. It had been $20.67.

Since World War II there has been growing pressure, especially from mining interests at home and abroad, for another increase. Mining costs have gone up. Other prices have gone up. "Why not gold?" the miners ask.

Such a move would mean big profits for those who can turn dollars in for gold at the old price and resell it at the new price. United States citizens couldn't profit this way, because they are not allowed to exchange dollars for gold, but foreign countries could.

The United States has insisted firmly that it will not raise the price. At times, some doubt arises in foriegn circles and some dollars are exchanged for gold. But the trend never gets far, because of confidence in the United States position.

That confidence would weaken, however, if business went into a bad depression. Then foreigners would remember the way the United States raised the price of gold to cope with its last big depression.

A slump abroad also could touch off demand for United States gold. If prices stayed high in the United States and went down in other countries, it would be advantageous for foreigners to buy less here and more in other markets. Fewer dollars would be needed, and dollars would be cashed in for gold.

WHAT TO DO

Despite its optimism, the Government is considering what steps to take if the drain on gold approaches a danger point. Officials recall that a flow of gold out of United States in 1931–32 hampered efforts to overcome the depression.

Things that can be done are few and difficult. Aid could be cut off to keep foreigners from getting more claims on United States gold. Reductions could be made in the supply of money and the Federal Reserve deposits.

In a pinch, the United States could even raise the price of gold, despite its denials. Then each ounce of gold in Fort Knox would be legal backing for more dollars, in line with the 25-percent requirment. Or Congress could be asked to wipe out that rule.

So far, the official decision is to study the situation but do nothing that might arouse concern abroad. Meanwhile, the United States finds huge resources of gold and dollars piling up in foreign hands, while the United States gold reserve is weakened.

The Middle East Crisis

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1956

Mr. BYRD. Mr. Speaker, under leave to extend my remarks, I wish to include a recently written article by David Lawrence, and I commend it to the attention of my colleagues. Mr. Lawrence emphasizes the responsibility of the United Nations to find a workable solution to the present Middle East enigma, a solution short of an all-out arms race which could only lead to disaster for Israel and the Arab States and which would surely precipitate and hasten a third world war. Mr. Lawrence also succinctly points out the danger to our own country, if this controversial issue is allowed to be injected into the presidential and congressional races to be used as a political football in an effort to gain votes from one side or the other. The article follows:

ONLY THE U. N. CAN HELP IN THE MIDEAST CRISIS

Time was when, if any events occurred which threatened the peace of the world, there would be a special meeting of the United Nations Assembly and a general discussion of the pros and cons of the problem.

This is what is called moral force—a mobilization of world opinion.

But today there is little inclination to call the United Nations assembly into session to take up the acute situation in the Middle East.

Maybe it's because the United Nations itself, through its "package deals" and its logrolling tactics, is afraid to tackle a factional controversy within its own ranks. Ever since the U. N. Security Council adopted a resolution of censure of Israel—a move that was interpreted in that country as partisan and as hostile to its interests—there has been difficulty in getting the U. N. itself to take a broad perspective on the whole Middle East problem.

It is true the U. N. had a commission on the spot and that it reported on the border raids. But it was a mistake to leave the matter to a military commission instead of one especially chosen to look into all phases. Instead of a resolution of censure of any other action on the border raids, the U. N. Assembly might well have used the occasion to call a halt to the use of force or the threat to use force on the part of any of the countries involved in the Middle East friction.

Until the U. N. steps in and demands that all the nations in the Middle East suspend their arms race, the situation may go from bad to worse. It is most unfortunate that the United States should be placed in the position of being required to take unilateral action. Whether Saudi Arabia gets tanks or Israel gets arms is not a matter for the Washington Government alone but for all the nations of the free world to consider.

Actually, the present crisis was provoked by the Soviet Union, which entered into negotiations to supply Egypt with arms. This, in turn, stirred the apprehension of the people of Israel. A chain reaction has been started which has aroused, too, the countries of the Arab world. All this is to the advantage of the Communists, who are fishing in troubled waters.

The solution lies in the charter of the United Nations, which is empowered to take up any dispute that threatens the peace of the world. Certainly, since the Soviet Union has been guilty of starting an arms race in the Middle East, a resolution of censure for this is long overdue.

The question is broader than any single country's interests. The United States Government wants to remain friendly with Israel and to furnish economic aid. But, at the same time, Saudi Arabia has made available a military base for the use of the American air forces. All this is well known to Moscow, which plays one side against the other.

The United States moreover, is in the midst of a presidential and congressional campaign, and the Middle East issue gets into American politics no matter how hard people in this country may strive to keep it out. For some of the candidates are bound to issue statements seeking to benefit by the vote of one group or the other of sympathizers with the factions in the Middle East controversy.

But when all the governments take up a question in the United Nations and debate it in the open, this can override any domestic attitudes or political quarrels as world opinion begins to mobilize.

There can be no peace in the Middle East unless the free world is united and examines the controversy as the United Nations, by its charter, is specifically obligated to do.

Collective action is always to be preferred to unilateral action, and the U. N. has a chance to recover lost ground by calling a special meeting to devise ways and means of ending the arms race in the Middle East. By exposing fully the causes of the friction in that part of the globe and by placing all the facts on the table, a way can then be found to introduce mediation and moral suasion—for neither side really wants a war.

The McCarran-Walter Act

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. MULTER. Mr. Speaker, I wish to call to the attention of our colleagues the following analysis of the McCarran-Walter Act, which appeared in the December 1955 issue of the Foreign Service Journal. The author, Mr. Fred M. Wren, spent 22 years in the Immigration Service before he was appointed visa officer at Halifax in 1946. Since then he has served in Montreal and Zurich. In 1948, 1949, and 1950 he had several details in the Visa Office in Washington, helping to write the visa regulations, and assisting in the preparation of a visa manual and a visa handbook for the use of visa officers in the field.

The article follows:

On June 27, 1952, a well-known bill became law when the Congress passed Public Law 414 over the veto of President Truman. Although the first sentence of the new legislation contained permissive authority to call it the Immigration and Nationality Act, it is only within the past few months that this title has begun to have much meaning to Americans outside the legal profession. Like many other pieces of highly publicized legislation, the law derived its first popular name from the chairmen of the Senate and House Committees which sponsored its passage, and it was thus unofficially christened as the McCarran-Walter Act. * * * When the law became effective on December 24, 1952, it became known internationally as the McCarran Act.

The act, which became effective on December 24, 1952, can now be evaluated more accurately than was possible 3 years ago. At that time the criticism of the act by its opponents, both in and outside of the United States, combined with the equally defensive praise from its sponsors created a babel through which the quiet voices of logic and objective analysis could not be heard. This din has now subsided.

During the 3 years the act has been in operation the administration and practical application of its provisions have been closely studied, both by the responsible officers charged with its enforcement, and by various organizations and individuals whose interests were affected in one way or another by the new law. These studies have served, not only to demonstrate the merits and deficiencies of the act, but also to bring into proper focus the divergent interests which prompted criticism from some quarters and defense from others. Since any evaluation of these factors must, in the interests of accuracy, be made with some understanding both of the purpose for which the legislation was drafted and the extent to which the act has achieved that purpose, a summary of a few of the main points of its historical background may be in order.

For many years prior to 1940 various individuals and agencies has been asking Congress to study existing immigration and nationality laws, and then to draft and enact legislation which would include all the desirable and necessary features of the previous laws, while excluding obsolete and undesirable materials. Since more than 100 laws then in the statute books were involved, the scope of the proposed legislative study was immense. A start was made when the Nationality Act of 1940 repealed, either entirely or in part, more than 30 previous laws dealing with American nationality. The new law revised and codified many other widely scattered bits of previous legislation, to provide one basic act governing all procedures through which American citizenship might be acquired, maintained, or lost.

Necessarily held in abeyance throughout World War II, the project of revising existing immigration and nationality laws was undertaken in earnest in 1946. Preliminary studies were made of the existing laws, and in 1948 the appropriate committees of the Republican-dominated 80th Congress began to hold public hearings on a bipartisan omnibus immigration bill, sponsored in the respective legislative bodies by Senator Revercomb, of West Virginia, and Representative Fellows, of Maine. Legal and technical experts of the Departments of Justice and State, and other Federal, State, and municipal law enforcement agencies, testified concerning the administrative feasibility of the bill.

Representatives of organized labor, religious organizations, welfare agencies, educational institutions, and veterans' organizations appeared before the committees and voiced their views and suggestions. Racial groups complained of the racial discrimination inherent in many of the previous laws, and asked for relief through the provisions of the new one. Economists testified concerning the probable economic impact which would result from the enactment of the bill. Unaffiliated individual aliens facing deportation told their harrowing stories and asked for a sympathetic law which would permit them to remain in the United States. Other individuals, some aliens and some American citizens, told of close relatives, or friends, or eminent foreign personages who were prevented by various legal technicalities from entering the United States, and asked for legislation which would make their entries possible.

Against this background of conflicting interests and evidence the omnibus immigration bill gradually took form. The obviously obsolete provisions of the old laws were weeded out. Sections of the bill were revised, and new parts drafted in an attempt to overcome its shortcomings as revealed by the testimony of witnesses at the hearings. Some otherwise desirable features of the original bill had to be eliminated after expert testimony had convinced the committee members that enforcement might be difficult, or impossible, or contrary to the best interests of the United States.

Early in 1952 President Truman asked if the bill would be ready for enactment that summer. When informed that another year was desirable to finish, perfect, and implement the proposed legislation, he said that something must be done immediately. Senator LEHMAN and Representative CELLER then introduced almost identical bills calling for the immediate entry into the United States of 300,000 aliens, some of them displaced persons, some being refugees and escapees, while others were already registered as intending immigrants, but chargeable to hopelessly oversubscribed quotas. Senator LEHMAN proposed to utilize for these aliens the vast number of quota numbers which had not been used during the war years. Senator HENDRICKSON introduced a similar bill, also with White House approval. Senator McCarran fought these, saying that either of them would sabotage his omnibus bill. He was then told by his party leaders that some kind of immigration legislation had to be enacted in that session of Congress, and that if it was not to be Senator Lehman's or Senator Hendrickson's, he had better prepare his own for immediate passage. This was done with considerable difficulty, and thus the Immigration and Nationality Act came into being. The act was passed over President Truman's veto on June 27, 1952, to become effective 180 days later at 12:01 a. m. on December 24, 1952.

Although the law, as printed, is divided into 4 titles, each of which is subdivided into chapters and sections, it may, for critical purposes, be regarded as falling into 2 main parts. The first, applying almost solely to aliens, sets up criteria which determine an alien's eligibility to receive a visa, and his eligibility to admission into the United States. It also prescribes certain requirements to be met by him during his residence in the United States, so long as he remains an alien. In addition, it provides authority and machinery for his deportation from the United States in certain circumstances. The second part deals with American nationality, stating the conditions in which it is acquired at birth, and how it may be acquired by naturalization. It also provides for the loss of American nationality in certain circumstances.

The average American who has had no personal experience with the law, nor with any person who has been either favorably or adversely affected by it, often wonders what all the agitation is about. Why should one Congressman or Senator condemn the law as discriminatory or unjust, while another of the same party, whose intelligence and patriotism are equally unquestioned, defends it? Why, in the face of President Eisenhower's 1953 recommendation for a revision of the act, did the 83d Congress fail to take the action which he requested? Why do some reputable and respected civic organizations clamor for revision and repeal of the law, while other institutions, equally reputable and respected, throw their support to the defending forces? The answers to these specific questions must necessarily be as complex as the law itself.

Perhaps the best way to find the answers is to simplify the problem and to attack one of the act's main problems. This is simply the size and scope of the law. We used to have one law which stated how many immigrants could enter the United States annually. There was another law which rendered alien contract laborers inadmissible into the United States. Still another stated that a naturalized American citizen would lose his citizenship if he lived for 3 years in the country of his birth. Now, these were 3 of more than 50 laws which were repealed or amended by, or incorporated in, the Immigration and Nationality Act. A person might be in favor of one of them, he might strongly oppose another, and he couldn't care less about the rest of them. The point is that

formerly he could state conscientiously that he felt that one was good while another was bad. How can he comment on new legislation which includes them both?

That, boiled down to its fundamentals, is the McCarran Act. It is so big, and it affects so many people in so many different ways, that no intelligent man can point to the law and say that it's all bad. Conversely, no man or organization should be forced or induced to defend it blindly as representing legislative perfection.

Returning to details, let us discuss some of the good points of the act. For the purposes of this discussion the postulate has been adopted that any section which confers upon an alien an advantage not previously enjoyed, without detracting from privileges previously enjoyed by him, or by any other alien, and without detriment to the security or welfare of the United States, is good. On the other side of the ledger are placed items which, in the opinions of objective observers, have unnecessarily deprived aliens of privileges previously enjoyed, which have demonstrated racial discrimination, which have needlessly held our immigration policies up to international ridicule, which have ignored moral commitments or obligations to certain groups of aliens, and which have added to the mechanical workload of the various enforcement agencies, without a compensating contribution to the security or welfare of the United States.

1. Under the old law an American husband could petition for non-quota status for his alien wife, but an American wife could not obtain non-quota status for her alien husband. The new law makes this possible.

2. The old law permitted an alien husband to confer his quota nationality upon his accompanying alien wife, but the wife did not have the same privileges. This meant that a man born in England could get immediately available British quota numbers for himself and his Hungarian-born wife, but that a woman born in England could not bring her Hungarian-born husband within the British quota. The new law permits either spouse to confer quota nationality upon the other.

3. Under the old law persons "who have been induced, assisted, encouraged, or solicited to migrate to this country by offers or promise of employment, whether such offers or promises are true or false, or in consequence of agreements, oral, written, or printed, express or implied, to perform labor in this country of any kind, skilled or unskilled" were excludable as alien contract laborers. Americans who advertised in the foreign press for prospective employees, or who volunteered to assist a prospective immigrant by lining up employment for him in the United States, were, by the same law, liable to fine and imprisonment. This law, which served a useful purpose in breaking up the peonage system utilized by some unscrupulous employers in the last years of the previous century, and in the early days of this one, became a legal bottleneck a few years later, preventing American industry from obtaining the foreign skills which have been needed so desperately. The new law canceled the prohibitions mentioned above.

4. Although foreign students are usually non-immigrants in every sense of the word, the old law required them to obtain what was known as an immigration visa, rather than the passport visa issued to other classes of non-immigrants. The new law properly placed the alien student in a non-immigrant category, and permits him to receive a passport visa which, on the basis of reciprocity between the United States and the country of which he is a national, is usually without charge to him.

5. Under the old law any alien who had ever been convicted of any crime or offense involving moral turpitude was excludable from the United States as a criminal. Petty theft had been judicially determined to involve moral turpitude. Thus we had the frequent case of a responsible man with an unblemished record of 20 or 30 years in his community, being inadmissible into the United States, due to some youthful prank. The new law gives the youthful offender, and even the single-conviction minor offender regardless of age, a chance for admission.

6. While the old law was harsh and unforgiving toward offenders who had been convicted of crimes involving moral turpitude, it made no provision for the exclusion of chronic offenders convicted of crimes in which a determination of moral turpitude had not been made judicially.

The new law changed all of this by rendering excludable an alien who, as the result of two or more convictions for offenses other than political, has been sentenced to confinement for more than 5 years.

7. Under the Immigration Act of 1924 a child born in India to a British Army family was chargeable to the quota for India. A child born to a European missionary family in China or Japan was chargeable to the quota of the country of birth. Since the quotas for many of these countries were and are oversubscribed to the extent that many years have to be spent on a quota waiting list before a quota number can be allocated on a worldwide registration priority basis, some cases of extreme hardship developed.

A wealthy English scientist decided to migrate to the United States to accept a responsible position with an American university. He and his wife and their two children born in England could get visas without trouble or delay. Their other child, born in China, would have to undergo 8 or 10 years of waiting time before a Chinese quota number could be obtained for him. Refusing to break up his family by going to the United States without his China-born son, the scientist remained in England, depriving the United States of badly needed professional skill.

The new law has made it possible to charge any of the children mentioned above to the quota of either of their European-born parents.

8. Prior to the enactment of the new law, an American citzen could, by petition to the Attorney General, confer nonquota status on his alien wife, and on his alien unmarried child less than 21 years of age. If, however, he married an alien widow with children, he could not obtain nonquota status for his stepchildren.

The new law corrects this situation by permitting him to petition for a step-child, as well as for his wife and his own children.

9. An alien legally admitted into the United States for permanent residence, and who wishes to visit Europe or Asia, can obtain from the Immigration and Naturalization Service before departure from this country, a reentry permit. This was also true under the old law, but each permit was valid for only one reentry. For the businessman who has to make frequent trips abroad the single reentry permit was slow, expensive, and bothersome. Under the new law the reentry permit may be retained by the traveler, and used for numerous return trips to the United States within the period of its validity.

10. Although the Chinese Exclusion Act of 1882, which prevented the immigration of Chinese into the United States, was repealed in 1943, most natives of other countries of Asia, and of the islands adjacent to the eastern and southern coasts of Asia, were excludable on either geographical or racial grounds. For example, if a person born in Malaya of Malay parents were to apply for a visa or for admission into the United States, he would be refused under section 3 of the Immigration Act of 1917, as a native of the Asiatic barred zone, while a child born in Canada to a Japanese father and a Canadian mother would be excludble under section 13 (c) of the Immigration Act of 1924, as a person ineligible to citizenship—since he could not meet the prerequisite for citizenship of possession of a preponderance of white or African blood.

The new law eliminated the geographical and racial grounds for exclusion—thus forming a logical foundation for the claim made by Senator McCarran and other defenders of the legislation, that for the first time in the history of the United States no one will be excludable from admission, or ineligible to citizenship, on racial grounds.

11. Under the Nationality Act of 1940, a child born outside the United States to parents, one of whom was a citizen and the other an alien, could be a citizen at birth only if the citizen parent had previously resided in the United States for 10 years, at least 5 of which had to be subsequent to the parent's 16th birthday. This underlined requirement made it impossible for an American citizen under 21 years of age to transmit American citizenship to his or her child born abroad in these circumstances.

The new law retains the 10 years of residence requirement, but says that the mandatory 5-year period may be subsequent to the 14th birthday. The change indicates that Congress has taken official recognition of the fact that American citizens between the ages of 19 and 21 are potential parents, and that they should be accorded the same privileges of citizenship as those extended to their more mature brothers and sisters.

SUBJECT TO UNFAVORABLE CRITICISM

The foregoing items are generally considered to be favorable. Let us look at some of the legal changes which have been the subjects of unfavorable criticism.

1. The establishment of subquotas has been attacked as an example of the law's racial discrimination. The Immigration Act of 1924 set up quotas for all the European countries. It also provided that a person born in any of the colonies or protectorates owned or administered by these quota countries should, for the purposes of the law, be considered as having been born in the mother country, and chargeable to the quota for that country. This meant that persons born in Bermuda or Malta were chargeable to the British quota, persons born in Martinique and Madagascar came under the French quota, etc. Since the quotas of most of the mother countries were small, and since few persons born to non-European parents in the colonies could qualify under other sections of law and regulation to obtain visas for the United States, the demand against European quotas from qualified colonial applicants was confined principally to the British quota, which has never been filled.

Large numbers of inhabitants of the British West Indies began to apply for and to receive visas under the British quota. Natives of Malta did the same. During the period from 1930 to 1946 immigration to the United States dwindled to a trickle, due first to widespread unemployment and later to wartime restrictions on travel of an unofficial nature. In 1946, however, with defense industries crying for labor of all kinds, and with transportation facilities once more available, the immigration flood began to flow once more. Each immigrant had to have a visa. Visas could be obtained by qualified applicants only from an American consular office. Administrative waiting lists were established in the lightly staffed consular offices in the Caribbean area, and prospective immigrants who had qualified in every respect under law and regulation to receive visas had to wait 2 or 3 years before the limited visa-issuing facilities of the consulates in question finally ground out their visas.

During the years 1950 to 1952 the word spread through the grapevine that a person who waited around Kingston, Nassau, Barbados, or Port of Spain, hoping to get a visa in 2 or 3 years, was silly. All he had to do was

to get out of the Caribbean area, and apply for his visa at an American consular office which was equipped with personnel and facilities to handle his case without delay. Hundreds, if not thousands, of West Indians began applying in Canada, in the United Kingdom—anywhere they could get to, where the visa production was better keyed to the law and regulations. Such was the situation during the final hearings on the McCarran-Walter Act.

The solution to the problem adopted by the committees, and thus made a part of the law as enacted, was to establish subquotas for all colonies and dependencies. Under the new law, each colony is given a subquota of 100 per year. This means, for example, that only 100 persons born in Jamaica can obtain quota visas in any 1 year, no matter whether the applications are made in Kingston, Montreal, London, or anywhere else in the world.

2. Section 212 of the law lists 31 categories of aliens who are both ineligible to receive visas and inadmissible into the United States. Paragraph (24) of that section is quoted to show what critics of the law mean when they claim that discriminatory features are frequently buried in a mass of technical phraseology which appears to the casual reader to be less sinister than confusing.

"(24) Aliens (other than those aliens who are nativeborn citizens of countries enumerated in section 101 (a) (27) (C) and aliens described in section 101 (a) (27) (B) who seek admission from foreign contiguous territory or adjacent islands, having arrived there on a vessel or aircraft of a nonsignatory line, or if signatory, a noncomplying transportation line under section 238 (a) and who have not resided for at least 2 years subsequent to such arrival in such territory or adjacent islands."

What does all this mean? In general, it means that an alien born outside the Western Hemisphere may encounter considerable difficulty and delay in obtaining a visa in foreign contiguous territory or adjacent islands; and that if he has, by good fortune, obtained a visa from some American consular office outside that area, his route of travel to the United States, as well as his means of transportation, are limited by the law. The following instance will show what this section has meant to one individual.

A Polish-born alien has waited 6 years on a quota waiting list in Buenos Aires, and has finally received an immigrant visa with which to join relatives in the United States. She decides to spend a month with a brother who lives in Mexico City before preceeding to New York. At the end of the month she applies for admission, presenting her valid visa at El Paso. She is refused admission under the authority of the section quoted above, since she has been in Mexico less than 2 years.

Proponents of the new law say that this section is not new, having been in both the 1917 and 1924 acts; that it is necessary on two grounds: (1) To prevent irresponsible transportation companies from dumping potential immigrants into areas physically near the United States, and (2) to provide a cooling-off period of 2 years for those enterprising aliens who do manage to reach those areas, thus providing the visa-issuing consular officers with a legal buffer against the demands for immediate visa services which would otherwise constitute a serious strain upon the limited facilities of various consular offices.

It is true that the old laws had similar restrictions pertaining to the entry of aliens from foreign contiguous territory, but this term included only Canada, Mexico, and the French islands of St. Pierre and Miquelon. The new law's additional phrase "and adjacent islands" extended this discriminatory perimiter to include Cuba, the Dominican Republic, Haiti, Bermuda, the Bahamas, Barbados, Jamaica, the Windward and Leeward Islands, Trinidad, Martinique, "and other British, French, and Netherlands territory or possession in or bordering on the Caribbean Sea."

WHY TECHNICAL INTRICACIES

A natural question comes to the mind of the average person who is unfamiliar with the technical intricacies of this section of law. Why—if an alien has so much trouble if he arrives in one of these areas on a vessel or aircraft of a nonsignatory line—does he not avoid all this by traveling on a signatory line? A good question, with the joker in the answer that, except for Canada, none of the areas mentioned are served by any signatory line. Such a line is one which has signed a contract with the Attorney General giving it permission to disembark in Canada alien passengers destined to the United States. In return for this privilege the transportation line agrees to provide and maintain at its expense certain landing stations and inspection facilities, and to submit to and comply with all the requirements of the United States law which would apply were their alien passengers being landed at a port in the continental United States. Nearly every major steamship company and air line is signatory for the purpose of landing passengers in Canada. None is signatory for any of the other areas mentioned above. Consequently, no matter how an alien travels to any one of these areas—unless he enters it directly from the United States—he is bound by this section of law. He must either wait his 2 years, or purge himself of his legal ineligibility to enter the United States by moving to another country outside the proscribed perimeter. The Polish girl mentioned above chose the latter course. She flew back to Lima, Peru, and from there flew directly to New Orleans where she was admitted as a permanent resident immigrant without difficulty.

Pointing to this case, and many similar ones, critics ask what good purpose has been served by these long, expensive flights, other than to furnish business for foreign airlines. They also ask why this section of the law, the original purpose of which was nullified by the Immigration Act of 1924, has been carried over into the new law with a considerably broadened scope of applicability.

(3) As noted previously, the fact that an alien was born in the Asiatic barred zone prevented him from entering the United States as an immigrant under the old laws. The removal of this statutory ground for exclusion was hailed as the new law's major contribution to the fight against racial discrimination. Critics, however, claim that any practical advantage gained through that action was nullified by the establishment of the Asia-Pacific triangle quota area, and by the discriminatory application of the newly-established quotas to persons of oriental ancestry, regardless of their places of birth. A good example of what they are complaining about it furnished by the following case history.

John was born in England. His parents were Indians. He never went to India, being educated and growing to manhood in England. During World War II he served in the Royal Air Force, and married an English girl. After the war he migrated to Canada with his wife, and while living in Toronto a son was born. A business opportunity caused them to decide to move to the United States. The family applied for visas as immigrants. Since both husband and wife were born in England, and the child in Canada, no quota complications were foreseen. The new law furnished these in abundance.

Ordinarily a person born in England is chargeable to the instantly available British quota. But, since his parents were Indians, he was, under the new law, chargeable to the quota for India. How long would it take to get an Indian quota number? Fifteen or 20 years, at least. Then—a happy thought. They had heard that the new law provided that an immigrant spouse could be charged to the quota of the accompanying spouse. John's wife could get a British quota visa without delay—couldn't he take advantage of this liberal feature of the new law and obtain a British quota visa too? No. As the son of Indian parents he could come only under the quota for India. Could not the wife take her British quota visa, and after entering the United States alone, could she not petition for a preference for him under the Indian quota, as the husband of an alien lawfully admitted for permanent residence? Yes; she could do that. But the records showed that there were so many petitions on file for similar preference under the Indian quota that it would take 7 or 8 years before his turn would be reached, even after her petition for the preferential status should be approved. Fortunately, for their peace of mind, they decided not to leave Canada, and their applications for visas were withdrawn, before learning that the McCarran Act had placed their Canadian-born son under the quota for India.

Section 101 (a) (27) (C) of the act provides nonquota status to an immigrant "who was born in Canada, the Republic of Mexico, the Republic of Cuba, the Republic of Haiti, the Dominican Republic, the Canal Zone, or an independent country of Central or South America." There are no apparent limitations or qualifications of this statement—a person born in one of the areas named is a nonquota immigrant. Yet section 202 (a) (5) of the same law, without any reference to the section cited above, states that any alien who is attributable by as much as one-half of his ancestry to a people or peoples indigenous to the Asia-Pacific triangle is, with certain exceptions which do not include persons born in the areas mentioned above, chargeable to the quota of his ancestry. This means that John's son, born in Canada to a British mother and an Indian father, is chargeable to the quota for India.

President Truman summed up the situation effectively in his veto message of June 25, 1952, 2 days before the Congress passed the legislation without his approval. He wrote, "The only consequential change in the 1924 quota system which the bill would make is to extend a small quota to each of the countries of Asia. But most of the beneficial effects of this gesture are offset by other provisions of the bill. The countries of Asia are told in one breath that they shall have quotas for their nationals, and in the next, that the nationals of the other countries, if their ancestry is as much as 50 percent Asian, shall be charged to these quotas. * * * These provisions are without justification."

4. Although our laws have, since 1873, prohibited the immigration of prostitutes, or persons coming into the United States for the purpose of prostitution. It was not until the McCarran-Walter Act became effective that prostitution became one of the unforgivable sins. In order to exclude from admission under the old law it was necessary for the Government to prove that the applicant was, at the time of application, practicing prostitution, or planning to practice it in the United States. If, for example, a girl with a record of prostitution married an American citizen, and if there was nothing to indicate that she had continued to be a prostitute after marriage, or that she planned to resume the practice after eventual entry into the United States, there was no legal ground for refusing to issue a visa to her or to admit her upon arrival at a United States port of entry. The language of the new law, however, renders the same woman ineligible to receive a visa, and inadmissible at a port of entry. (Sec. 212 (a) (12): Aliens who are prostitutes "or who have

engaged in prostitution"; (quotation marks supplied to indicate new restriction).)

5. The problem of mortgaged quotas was not only unsolved, but made still more complex, by the implementation of the McCarran-Walter Act. The Displaced Persons Act of 1948 and its subsequent amendments were passed in an attempt to relieve the plight of some of the more than a million displaced persons in Germany, Austria, and Italy. About 400,000 persons were admitted into the United States under the provisions of this law, one of which was that if the quota to which a displaced person was chargeable was oversubscribed, he could get a quota number just the same—such number to be charged against that quota in a future year. Up to 50 percent of any quota could thus be mortgaged for the purposes of the Displaced Persons Act, for as many years as was necessary, until the demand was satisfied. The expiration of the act left more than 20 quotas mortgaged for many years to come—8 being obligated beyond the year 2000. Let's break this down and see what it means in an individual case.

Applicant A and his wife were both born in Latvia. In 1936 they moved to Paris, where A established himself in business. In 1946 they decided to go to the United States, and applied at the American Embassy in Paris for the necessary visas. They were told that the quota for Latvia was only 236 per year, and that they would have to wait for 3 or 4 years before their names would be reached on the waiting list. They are still waiting. The Displaced Persons Act was responsible for the mortgaging of half of the Latvian quota for every year up to and including 2274. Thus only 118 Latvian quota numbers are available for normal immigration purposes each year for more than 300 years. However, A and his wife were not discouraged. They were in no hurry to go. They had already waited a long time, and they thought that mortgaging one-half of the quota meant only that they would have to wait twice as long as originally anticipated. This was theoretically true prior to the effective date of the McCarran Act, section 203 of which initiated a series of preferences under the quota.

There are four of these preference categories, and any one of the first three may exhaust the entire quota for the year. If, by chance, there are any quota numbers left after the demands of the first three preference are filled, 25 percent of them go to a fourth preference group, and the remaining numbers may then be given to nonpreference applicants like Mr. and Mrs. A. Unfortunately for them, however, there have been no nonpreference numbers for about 2 years, and the A family still faces an indefinite waiting period, after having spent more than 9 years on the waiting list.

This situation was foreseen by various individuals and agencies at the time the McCarran Act was being considered by the congressional committees, and several different suggestions were made for its relief. Some witnesses advocated a statutory cancellation of the mortgage against future quotas. Others recommended that the four preference categories just mentioned be made into nonquota categories, thus leaving the unmortgaged half of the quotas available for nonpreference aliens. These suggestions were, however, unheeded, and both the mortgaged quotas and the preference provisions became parts of the new law. Other quotas under which a nonpreference registrant faces the same hopeless situation are China, Egypt, Estonia, Greece, India, Iran, Iraq, Lebanon, Rumania, Spain, Syria, Turkey, and, to a slightly lesser extent, Austria, Bulgaria, Danzig, Hungary, Israel, Italy, Lithuania, Poland, Free Territory of Trieste, U. S. S. R., and Yugoslavia.

6. One of the features of the act which has received criticism from legal experts and laymen alike is the almost unlimited discretionary authority placed in the hands of the Attorney General of the United States through its provisions. The criticism on this point was expressed in advance of the enactment of the law by President Truman, who stated in his veto message of June 25, 1952, "Some of these provisions would empower the Attorney General to deport any alien who has engaged or has had purpose to engage in activities 'prejudicial to the public interest' or 'subversive to the national security.' No standards or definitions are provided to guide discretion in the exercise of powers so sweeping. To punish undefined 'activities' departs from traditional American insistence on established standards of guilt. To punish an undefined 'purpose' is thought control. These provisions are worse than the infamous Alien Act of 1798, passed in a time of national fear and distrust of foreigners, which give the President power to deport any alien deemed 'dangerous to the peace and safety of the United States.' Such powers are inconsistent with our democratic ideals. Conferring powers like that upon the Attorney General is unfair to him as well as to our alien residents."

7. The effects of the McCarran Act on American citizens who choose to live or work outside the United States at times have been attacked as restrictive and discriminatory. One of the changes brought about by the new law relates to the period of time which an American citizen by naturalization may remain outside the United States without forfeiting his citizenship. The old law provided that, with certain exceptions, a naturalized citizen would generally lose his nationality by residing continuously for 3 years in the country of his birth, or former nationality, or by residing "continuously for 5 years in any other foreign state." The phraseology of this law made it possible for a naturalized citizen to remain abroad indefinitely without losing his citizenship, provided he changed his residence occasionally. For example, a man born in France could live in France for 2 years and 11 months, and then move to Belgium where he could live for 4 years and 11 months, after which he could return to France and repeat the process as many times as he wanted to. The McCarran Act put a stop to this procedure.

With certain exceptions, based on employment by American interests, health, veteran's status, and similar considerations, the new law provided generally that a naturalized citizen would lose American nationality through continuous residence for 3 years in the country of his birth or former nationality, or through an aggregate of 5 years continuous residence in any other foreign state or states. The new law also provided that nationality would be lost under this foreign residence section, "whether such residence commenced before or after the effective date of this act." This retroactive effect of the act caused the immediate expatriation of many naturalized citizens who had been living abroad, and who were unable to return to the United States before the effective date.

8. Another section of the law—349 (a) (4)—has been attacked as being both discriminatory and unconstitutional. This provides that a national of the United States whether by birth or naturalization shall lose his nationality by "accepting, serving in, or performing the duties of any office, post, or employment under the government of a foreign state or a political subdivision thereof, if he has or acquires the nationality of such foreign state." This sounds innocuous, but the following case history will show how it worked out in an individual case.

A daughter was born to Swiss parents residing in the United States. Since Swiss law provides that children of Swiss parentage are Swiss nationals, regardless of the place of birth, this girl acquired both Swiss and American nationality at birth. After being educated in the United States she went to Switzerland at the age of 30, to visit her parents' old home and relatives. While there she was offered employment in a hospital in Zurich. She accepted this position early in 1952, after checking with American consular authorities to make sure that such employment would not affect her citizenship status, even though the hospital was operated by a branch of the Swiss Government. Under the old law a dual national would lose his American citizenship through employment by a foreign government only if (1) the position required the taking of an oath of allegiance to the employing government, or (2) if the position which the employee was to fill was one limited to nationals of the employing government. Since no oath of allegiance was required from any employee of the hospital, and since there were no nationalistic limitations to the position which she was to fill, she was told that this employment would not in any way affect her citizenship status.

She was working in the hospital on the effective date of the McCarran Act, of which she had had no advance notice. Early in 1953, when applying for an extension of her American passport, she was informed that the passport could not be extended because she was no longer an American citizen, having lost her citizenship under section 349 (a) (4) of the new law the moment it became effective on December 24, 1952. The girl was expatriated automatically on the effective date of the act and found that she was without recourse in the matter. There was no one to whom she could appeal, for the enforcing agency—the Department of State—has no discretion in its application of this part of the law.

It is impossible to weigh the favorable features of the act against the unfavorable ones, and, by doing so, determine whether the law is predominantly either good or bad, since the number of persons favorably affected by one section never corresponds to the number unfavorably affected by another. As stated earlier one can best judge the overall merits and deficiencies of the law through an appraisal of the degree of its success or failure in achieving the purposes for which it was drafted. The purpose of codifying and integrating all immigration and nationality laws within the framework of one statute was accomplished. The purpose of revoking obsolete laws was achieved. The purposes of removing racial bars to naturalization and immigration and of elimination of discrimination between sexes with respect to immigration have been fulfilled. With these major accomplishments listed on the credit side one may well ask what more can be expected from ane piece of legislation. And it is on this point alone—expectation—that the answer depends.

Defenders of the law point to these accomplishments and improvements, and state that the favorable results obtained exceed their original expectations. They concede that minor amendments are desirable to eliminate injustice and discrimination in certain individual cases, but they insist that the national origins quota system established in 1924 be perpetuated as a necessary foundation for American immigration policy. Critics, however, claim that the expectations, as well as the hopes and prayers of millions of people all over the world, have been sadly crushed by the McCarran Act, principally because it had perpetuated this quota system which they consider to be antiquated, unrealistic, and cruelly discriminatory against certain races, religions, and countries.

And thus we arrive at the fundamental issue—that of a national immigration policy. Since 1924 our policy has been based on the national origins quota system. From 1924 to 1929 the quota for any country was 2 percent of the number of foreign born persons

of such nationality who were residing in continental United States according to the census of 1890. In 1929 the factors in the formula were changed, resulting in quotas being set by mathematical proportion. The quota for any country bore the same relation to 150,000 as the number of inhabitants of the United States having that national origin bore to the total number of the inhabitants of the United States, according to the census of 1920. The minimum annual quota for any country was 100. The total of the quotas amounted annually to 154,277, until January 1, 1953, when the provisions of the McCarran Act increased them slightly to 154,657.

The national origins system has been under attack from its inception on the grounds that it was devised to cut down immigration from Southern and Eastern Europe, on the theory that Nordic peoples are more easily assimilable into the American population than the people most adversely affected by quota restrictions. It has been attacked on religious grounds as discriminating both against the Catholics of Italy, Spain, and Portugal, and the Jews of Poland, Hungary, and Rumania. It is the common belief of objective analysts that most of the uproar over the McCarran Act was not caused so much by anything the law did, as by what it did not do—create and implement a new and less restrictive immigration policy, permitting an up-to-date approach to modern migration problems. The McCarran Act, through the refusal of its framers and sponsors to depart from the traditional policy of quota restriction, thus became a target for criticism and abuse, not only from those adversely affected by any of its provisions, but also from those chronic and articulate opponents of the national origins system.

An objective appraisal of the current situation was furnished by Mr. Cabell Phillips, who wrote in the New York Times of April 7, 1955, "Senator HERBERT LEHMAN and Representative CELLER, both New York Democrats, joined forces a year and a half ago to supplant the McCarran-Walter Act with an omnibus immigration bill of their own. It differs from the present act in these principal ways: (1) abolition of the national origins basis for establishing quotas; (2) increase of the maximum annual quota to 250,000; (3) the transferability of unused quotas, and (4) amelioration of the security and eligibility requirements. They have reintroduced this measure in both the House and Senate in the present session. However, there is little evident intention in either Chamber to take it up at this session. This seeming apathy, however, is deceptive: it is less an absence of interest than an urge not to stir the issue's partisans. On the one hand is the natural urge of former immigrants (or their descendants) to share the blessings of 'the American dream' with their kinsmen abroad. Similarly, people who style themselves liberals, irrespective of their national origins, believe that the opportunities of American citizenship ought not to be denied others who sincerely want it. This theme figures strongly in the dogma of most of the so-called nationalist and patriotic societies. Opposed to freer immigration are the conservatives generally, and particularly those whose immigrant status is many generations old. They fear not only the 'mongrelizing' influence of heavy immigration on the 'American bloodstream' but also the influence of 'foreign ideologies' on our political thought. Thus the issue is a highly emotional one that cuts across traditional party lines. While both parties are publicly committed to easing the strictures of the present immigration law, it is a task from which both leaderships shrink."

Washington, the Perfect Citizen

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, the Honorable Timothy J. Murphy, commander in chief of the Veterans of Foreign Wars of the United States, delivered an outstanding address at the annual George Washington birthday luncheon at the George Mason Hotel in Alexandria, Va., February 22. It is a privilege for me to insert his remarks at this point in the RECORD and to commend Commander Murphy for his pertinent remarks. The Veterans of Foreign Wars of the United States is one of the most important patriotic organizations in this country. I commend Commander Murphy's remarks to every patriotic American:

WASHINGTON, THE PERFECT CITIZEN

It is a privilege to be here today in Alexandria, Va., the old hometown of George Washington. To lay a wreath on his tomb at Mount Vernon is a superlative honor, one that will ever be cherished, both in my official capacity as the Commander in Chief and representative of the more than 1,250,000 members of the Veterans of Foreign Wars, and personally as an American citizen, who with humble pride had the opportunity of paying respectful homage to our great hero.

All of us from earliest childhood were taught that Washington was truly great; later we learned in more detail why he was great. But what has impressed me most of late is the extent and the impact of his international renown—a universality—that resulted from the magnitude of his achievement and its indelible impress upon the history of civilization. That we say because he continues now as in his own lifetime to receive the applause and inspire, the reverence of freedom-loving peoples everywhere. And—it is a profound reverence—one that has not diminished with the years. In his lifetime, it was more personal. After the Revolution, Lord Erskine, one of England's greatest lawyers, when sending one of his speeches to Washington, wrote on a blank leaf: "I have a large acquaintance among the most exalted and valuable classes of men; but you are the only human being for whom I have ever felt an awful reverence."

Yes; the world revered and reveres Washington. Last November, when we, of the Veterans of Foreign Wars, were honored by the award of the French Legion of Honor to its commander in chief, it was learned at the time that close to the spot where our ceremony took place in the Invalides, Napoleon, who had decreed a period of mourning for the French Army on news of the death of Washington, also ordered that there be delivered at the shrine of the French military, a funeral oration in eulogy of the great American. At the time, ships of the British fleet around the world, half-masted their flags on the news of his passing. All extraordinary honors that did much to enhance the prestige of the new American Republic.

Hundreds of speakers will talk about Washington today with appropriate emphasis on the more conspicuous aspects of his career; many will refer to his sage counsel both on domestic and foreign policy. Also, thousands of small boys and girls will, throughout the land, recount the traditional tales such as "cutting down the cherry tree" and other stories about Washington that are part of our most cherished folklore. Surely, every program and ceremony that emphasize the unselfish, highminded, and patriotic characteristics of Washington stimulate better Americanism.

And with Americanism in mind, I shall comment on Washington, the citizen, "the perfect citizen," Emerson called him. How did he become a perfect citizen? Some insight is gained as to how, when we ponder the two mottoes, the spirit of which he followed from early manhood. They were: "Deeds, not words" and "For God and country." And to attain or proximate such high goals, we might next ask, What were some of the finer qualities of character and conduct that he so consistently displayed.

Washington became the perfect citizen by living up to his mottoes. Love of country came first, and this meant to him a conscientious discharge of the public and military duties of his time and station in life; duties executed always with a high intelligence, and a manliness without vanity or ostentation. The Golden Rule seemed to be his guide whether it be the high business of state or his private and official relations with men. He chose wise counselors and from them drew the best collective wisdom. He was fearless of danger, and showed a courage, both moral and physical that became a part of his nature. With this combination of intellectual and moral qualities and a trust in Almighty God, Washington built an illustrious career that neither time nor distance have diminished in grandeur.

As with most truly great men, some of these superior qualities were shown early in life. Twenty years before the Revolution, Washington a young militia officer, was sent by the Royal Governor of Virginia, on a dangerous mission to a then distant French outpost, just south of Lake Erie. In this wilderness, he was to learn all he could as to preparations for war, in addition to delivering to the French commander an official British protest against alleged territorial encroachments. The 600-mile journey through the snow, the fording of ice-choked streams and rivers, the ever-present danger and close calls of Indian ambush, comprise a story of incredible hardship. For his valuable services little thanks were received from on high, but a good number of his intimates saw then the qualities of fortitude and self-sacrifice that characterized his later career.

Shortly after this historic feat, Washington gave up his colonial commission, mainly because of his disgust with the unjust precedence accorded officers with royal commissions over those of the Colonies. However, when General Braddock came in 1755, the young Virginian was persuaded by the British general to join his staff as a volunteer aide in the French-Indian War. At the murderous battle of Monongahela where Braddock himself and over one-half of his force were massacred, Washington had four bullets pass through his coat and two horses were shot out from under him. The campaign might have been different had Washington's prudent counsel been heeded. However, after 5 hard years of military service, Washington tried again to secure a Royal Army commission, but when refused, he promptly resigned. It is of significance that his next military commission was that of Commander in Chief of the Army of the United Colonies.

Fate is mysterious. Have you ever thought that had Washington become a midshipman in the Royal Navy, as once contemplated, or been granted the much sought after Royal

army commission, it is highly probably our country would have lost the services of an American, called by some historians, the indispensible man of the Revolution.

After the French-Indian War, Washington returned to his beloved Mount Vernon, but ever public spirited, he served for 15 continuous years in the House of Burgesses. Of this period, it is said, that Washington never failed to retain the affection of his constituents and his people; that, I believe, can be attributed to his belief in and fight for the sanctity and well-being of the individual.

Never was it more in evidence than the awful winter of 1777 and '78 at Valley Forge. In a struggle to feed, clothe, and pay his men, he set an example of endurance, inspiration, and courage seldom equaled in military history. Think of it—in a command of about 11,000 men, Washington reported nearly 3,000 unfit for duty. The last hope—an army in tatters, unpaid, hungry, and many barefoot. General Washington wrote: "Their march might be traced by the blood of their feet." And to add to his grief, a small clique of senior officers intrigued to have him relieved to command. But the great soul rose above it all. With envy for none and solicitude for all, he continued with the task of making an army out of a sick mob. Briefly, he suffered and he struggled and he won.

During this ordeal, Washington was calm and patient, soliciting Congress in strong but dignified letters. Leaders of less stature in Washington's place perhaps would have borne down harder on the apprehended deserters and other offenders against discipline; and also have become bitter in their relations with the Congress. But Washington, the just, adhered to the Golden Rule of his youth: "So whatever you wish that men would do to you, do so to them." This guiding principle eloquently bespoke his character after death. For when the long and carefully drawn will of Washington was read, the second item stipulated: "Upon the decease of my wife, it is my will and desire that all the slaves whom I hold in my own right shall receive their freedom." Further provision was made that those slaves who were old and infirm would be clothed and fed by his heirs as long as the slaves should live. This was the last act of a Christian gentleman who stressed acts and not words, and who did for others what he should have liked others do for him.

It is my belief that the righteousness and beautiful philsophy of the Golden Rule had much weight in influencing the aristocratic Washington to battle for the common man; to fight for the cause of individual liberty and equal opportunity. And were he with us today, we may safely assume that as the perfect citizen, he would teach and inspire others to teach, the rights, privileges, and responsibilities of living in the world's greatest democracy. Or, as he phrased it, "the greatest trust ever confided to a political society."

He would tell us also that a country should never forget her veterans. The general who took no salary but consistently demanded that all justice and possible compensation be given his officers and men, will live forever in our history as America's first and most distinguished veteran. After returning to Mount Vernon in 1783 after more than 8½ years of military service there were precious few who could tell him much about battle and personal sacrifice. Reminder—when we of the Veterans of Foreign Wars work to help the needy veteran and his widow, we are carrying on the tradtion of our first military commander.

His heartfelt appreciation of those who served under him is expressed in the words: "You have in a common cause fought and triumphed together; the independence and liberty you possess are the work of joint counsels, and joint efforts, of common dangers, sufferings, and successes." He gave "cordial and effectionate thanks" to his officers and soldiers for their devotion to him during the war.

Washington believed that people who profit from freedom must pay something back to the common fund. That is why he said: "Every man who is in the vigor of life ought to serve his country in whatever line it requires and he is fit for." A counsel that should be heeded by loyal Americans everywhere.

All of these precepts and sage counsel together with the life itself of the Father of our Country should provide intense patriotic inspiration to us who enjoy the fruits of his labor.

As the patriot we shall ever remember him as one who gave to the limit of his physical and mental powers to gain the individual freedom which you and I enjoy.

As the warrior we shall remember him as the Commander in Chief of the Continental Army, the victor at Yorktown, the battle that gained the independence which led to our present status as the most powerful democracy in the world.

As the statesman we shall ever remember him as our first President, and as a drafter and defender of the principle of constitutional Government.

A contemporary of our perfect citizen, who, when designing an inscription for the great man's tomb, captured perhaps in a few words the essence of his eventful career.

"Magnanimous in youth
Glorious through life
Great in death."

What greater could be said of any man?

A Farmer Is Amused at the Moaning

EXTENSION OF REMARKS
OF
HON. OTTO KRUEGER
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. KRUEGER. Mr. Speaker, under leave to extend my remarks, I would like to present the following letter from a North Dakota farmer, Paul Swardstrom, Hurdsfield, N. Dak. Mr. Swardstrom says he does not live in the most fertile area in the world, but he is working, getting along and enjoying the fruits of his own labor:

Hon. OTTO KRUEGER,
Washington, D. C.

DEAR OTTO: It is with a little amusement that I listen to all this bemoaning of the farmers' plight as if the majority of the farmers were on the verge of bankruptcy and their families suffering from want. There is, certainly, no evidence of a farm depression in our area. Quite the contrary. Drive through main street of our little village any nice weekday afternoon and count the new-model cars parked along the sides; take inventory of all the new trucks, tractors, combines, and other modern machinery farmers have bought in the past year; note the new improvements in farm buildings, the TV antennas sprouting from farm homes, the new electric appliances from welders to water-pressure systems which have been installed and you can't help but conclude that farmers have been making money. Speaking for ourselves our net income (and we are just small farmers) has been greater all through the years than the yearly salary of our high-school superintendent.

Now I can only speak for ourselves, but I think we can rightly assume that we here in southern Wells County with our hills, sloughs, rocks, and gumbo haven't got the most fertile soil or the most ideal farming conditions in these United States. Nor are we, perhaps, the most efficient farmers in the country.

What I am trying tot say is that $2 wheat, 90-cent barley, and $3 flax is still a good money-making proposition; that Secretary Benson and his flexible price supports hasn't wrecked the farmer and that the majority of farmers aren't doing any kicking. It's the pig that can't get at the trough that does the squealing. And he makes so much noise you can't hear the contented grunts of the satisfied ones. Of course, the Talbots and Thatchers have their own peculiar axes to grind as have certain officeseekers. Most of us understand that.

We enjoy your articles in the Harvey Herald, OTTO. Your recent one about tree shelter belts is very apt. This is sound agricultural planning. Keep up the good work.

The soil-bank program seems the best answer to the farm surplus problem. But don't ruin it by tying it to 90 percent supports. We won't set aside the land if we can make more money cropping it.

Sincerely yours,

PAUL SWARDSTROM.

No Floors in Their Churches on Trinidad, British West Indies

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. SIEMINSKI. Mr. Speaker, a Baptist sect on the island of Trinidad, British West Indies, has no floors in its churches. A chauffeur on Trinidad developed the story in this way:

"There are many religions here. A Baptist group hasn't any floors in its churches.

"Why not?

"They love Mother Earth, believe it the supplier of strength and inspiration. It grows our food, nourishes our animals and gives us water to drink. These Baptists go on retreats lying in the ground, buried up to their chins. For over 20 days, they drink only fluids. They believe in this state, mother earth will give them visions and inspiration enough to carry them over until their next retreat. So they are most at home when they worship in their churches standing on the ground."

Mr. Speaker, when I related this story to Congressman BURDICK, of North Dakota, a Baptist, he said:

Well, don't you know, in politics, we say that a man with his feet on the ground can't be beat.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

Employment and Rehabilitation of Physically Handicapped Veterans

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, February 28, 1956

Mr. WILEY. Mr. President, I was pleased to receive from A. J. Healy, national commander of the Military Order of the Purple Heart, a copy of the current issue of the Purple Heart magazine. It is devoted, basically, to the cause of the employment and rehabilitation of the Nation's handicapped, particularly, of course, those who were disabled by reason of service in the uniform of our country.

The matter of employing the physically handicapped has long been one of my deepest interests. I have been pleased to cooperate with veterans' organizations, with the President's Committee on Employment of the Physically Handicapped, with the Wisconsin State Committee for the same purpose, and with other patriotic service groups.

I send to the desk two items from the Purple Heart magazine, the first, a brief summary editorial on hiring disabled veterans; the second, an article, by Col. Waldron E. Leonard, on properly employing the handicapped in the Government itself. I ask unanimous consent that both be printed in the Appendix of the RECORD.

I hope that the Military Order of the Purple Heart will be given the fullest possible support in its noble efforts along these lines, as well as in its other services to the combat-wounded.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

HIRE THE HANDICAPPED

Disabled veterans, trained under the Veterans' Administration vocational rehabilitation programs, have given America a message of hope over the past decade.

Through their achievements they have demonstrated that there is practically no type or degree of handicap that need be beyond the ken of rehabilitation; that there is practically no type of occupation out of reach of the properly trained, properly placed handicapped worker; that the handicapped, given the opportunity, can become valued, self-sustaining members of their community.

The record of the more than 600,000 disabled veterans who have received vocational rehabilitation training speaks for itself.

Many rehabilitated veterans of today never would have been considered for vocational rehabilitation in an earlier day. "Medically infeasible for training" would have been the verdict. But advanced rehabilitation techniques, coupled with the courage of the veterans themselves, have opened the doors to hope and achievement.

Veteran-trainees have had nearly every conceivable type of service-connected disability: 41 percent have bone injuries; 24 percent have had disorders of the nervous system; 8 percent have had tuberculosis; 7 percent have had diseases of the heart and circulatory system; the rest had a wide variety of other types of ailments.

Handicaps did not limit veterans' choices of training objectives. They set their sights for nearly every occupation at which man earns his living, from aeronautical engineer to zoologist, from office worker to machinist, from farmer to businessman. In all 35 percent trained for top positions in the professions and the managerial field; 38 percent for highly skilled trades; 14 percent in farming; and the other 13 percent for clerical, sales, and service jobs.

Disabled veterans have shown the world that there can be new hope for the handicapped. They have demonstrated that the emphasis can be shifted from disability to ability. The strength they have gained through rehabilitation is added strength for America.

WE CAN MEET THE EMPLOYMENT HANDICAPPED PROBLEM

(By Col. Waldron E. Leonard)

A veteran just left this office who had been hurt, a paraplegic, but no complaint or self-pity was expressed by him in any of our conversations. The wound he was suffering from was in the heart of disappointment in being assured in an interview several weeks ago that a position would be available for him in the near future. The disappointment was caused by the fact that he received a notice that a position as messenger was available and he could submit his qualifications for same.

It was difficult to try to explain how the error could occur that would cause him to be certified for this type of position, which job specifications certainly for this particular position would not qualify a paraplegic; or why after lengthy interviews that a counselor would not record or remember the physical condition of the applicant, but often I am afraid that those who have qualified for the responsibility of assisting the handicapped get careless in their interviews and leave the impression to the one seeking assistance that they have a motherly complex in sympathy for the applicant's condition or take the easiest route in discontinuing the interview regarding the applicant's qualifications for the possibility of employment by continuous suggestions of rehabilitation. While this program has rendered and is rendering excellent service, there certainly comes a time when counsellors should recognize that their responsibilities are assisting the handicapped in obtaining employment; which brings us to the subject of what employment.

Throughout the country various agencies are doing a splendid job familiarizing industry with the excellent service and performance of the so-called handicapped individual. Statistics are prepared and proof given in many instances that these employees are the most valuable and productive, but I believe that too much stress is given to the employment of the handicapped where he is so likely to be placed in a position other than he is qualified for, when perhaps with less effort a review of job descriptions where the handicapped could serve would be more helpful.

While proclamations are issued by the Federal Government, State government, and municipal governments encouraging industry to employ the handicapped and citations are given throughout the country by veterans' organizations and those interested for their cooperation in assisting in this program, it might be well if we could consider the possibilities of positions existing in Government that would seem a "natural" for many of our handicapped.

MUNICIPAL JOBS

For an example, in most towns and cities throughout the country hundreds of parking meters have been installed on the streets where coins are deposited for parking privileges. The requirement of the collectors for these meters is that they have a key and a sack, the key to unlock the meter and the sack to carry the coins. This about summarizes the entire responsibility. I wonder how many of the city fathers in issuing proclamations on employing the handicapped have thought of their responsibility.

Other positions in the municipal governments throughout the United States include traffic enumerators. This responsibility consists of standing or sitting in certain spaces on the street or in an office building in a window facing the traffic pushing a small button that totals the number of vehicles passing in a particular area so as to determine the flow of traffic for the purpose of installing stop signs, street lights, installation of bridges, widening highways, or generally improving traffic conditions in the area checked. Many cities have dozens of these enumerators. Their calculators are turned in to a centralized point at the end of the day and results tallied by clerks. Again, I wonder how many city fathers have given first consideration for these positions to the handicapped.

Many cities have discontinued the use of their acting police enforcement officers for walking along the sidewalks and issuing violation parking tickets and instead have employed auxiliary policemen and many cities are using ladies to carry out this responsibility. It appears to me that this type of position should be considered for the handicapped where qualified.

There are school guard crossing positions. Certainly no one would be more careful of your children and my children than those who know what it means to be hurt. These are just a few of the positions in your city that might be considered by the municipal government for the job opportunities of the handicapped.

STATE JOBS

In the State government you might review the qualifications needed to issue automobile license plates, watchmen or guards in State buildings or institutions, elevator operators in State buildings, positions of issuing traffic permits, road tests for applicants, and where toll roads and toll bridges are in existence and you see perfectly healthy individuals sitting on stools accepting payment for such privileges, ask yourself why the State government is not giving consideration to allocating these positions to the handicapped.

Several agencies of the Federal Government and the President's own Committee on the Employment of the Handicapped have done a remarkable job in calling to the attention of the public numerous instances where production increased or services rendered better by those listed as handicapped.

DISABILITY TO ABILITY

However, there seems to be a need for a committee or commission under the supervision of or working directly with the Civil Service Commission to iron out certain difficulties in job specifications and requirements that in some instances make it impossible for Government agencies to give assistance to the handicapped employment problem.

Certainly this review should not be limited to the positions heretofore described, as many of those referred to as handicapped do have administrative and supervisory qualifications that I feel are too often not given a position of responsibility due perhaps that a review of the actual duties required at the time of a vacancy might not correspond with the job specification sheet that had formerly been prepared for the position.

Perhaps the agency responsible for establishing rehabilitation centers should consider a business establishment in placing a new recruit, in allocating some funds direct to the agency for special attention, where he will most likely receive permanent employment after his initial training. Often in an organization where there are a variety of positions, it can be determined very soon as to whether the position the applicant is first placed on will be the most likely where he will succeed for future livelihood.

For an illustration, a veteran who was a former truck driver was given 3 years training as an automobile mechanic in rehabilitation centers. His service-connected disability left the veteran almost deaf. The factory manager discovered soon after his employment it was difficult for him to hear the motor running, thereby it being difficult for him to properly tune motors.

The manager of the plant noticed that the veteran was continuously visiting the fabric cutting table where seat covers were made. In talking with the veteran he found that he was fascinated by this type of work and transferred him to this department. In less than a year he was placed as general foreman in the department with several men under his supervision. This observation and consultation changed the employee from a disability to an ability and from a liability to an asset.

It might be well for Government agencies to consider giving an opportunity to some of the positions heretofore listed and certainly many others in their departments where satisfactory results could be obtained, first to the disabled veteran where qualified to perform such service, second, any handicapped person under the same circumstances, and third, to those of 40 years of age and over, who because of their age find it most difficult to obtain employment.

The Family Farm

EXTENSION OF REMARKS

OF

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1956

Mr. LECOMPTE. Mr. Speaker, from the richness of his experience as director of a rural parish in Appanoose County, Iowa, the Reverend Banks Doggett, Jr., of Unionville, Iowa, has expressed in a letter to me his thoughts on the farm problem, and the conclusions he has reached on solving it. He is concerned with the spiritual and economic welfare of all people—those with whom he comes in contact on the family-sized farm and those who could be helped by the development of a better plan for research, production, and distribution of farm products.

Under leave to extend my remarks in the RECORD I ask unanimous consent to include Mr. Doggett's letter:

THE METHODIST CHURCH,
APPANOOSE COUNTY PARISH,
Centerville, Iowa, February 9, 1956.

Hon. KARL M. LECOMPTE,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: Allow me to introduce myself to you. I am the Methodist minister appointed to the directorship of the Appanoose County parish. Perhaps you are familiar with this rural project. It has been one of the pioneer projects in rural work in our church. The churches of the county are cooperating together for a more effective ministry to the area. These churches are: Unionville; Wesley Chapel, south of Moravia; Iconium; Mystic; Brazil; Plano; Numa; Cincinnati; Zoar, southeast of Exline; Sharon Chapel, east of Centerville; and Fairview, southwest of Moravia.

The spiritual life of these communities is dependent upon several physical considerations. Our world has come to such a place that we cannot separate secular life from spiritual life. It appears that we now believe—that what one does during the week has an effect on what one does on Sunday; and that, what one does on Sunday, affects what one does the remainder of the week. This is as it should be.

I am very much concerned, therefore, with what goes on during the week for my people, for that is going to have an effect upon what we attempt to accomplish in the church on Sunday. Man's life is a single experience, composed of the experiences of every day. This brings us to the point I wish to visit with you about.

My concern is for the family life of rural-agricultural people. I share a like concern for the industrial worker. The peculiarity of the situation in this area—and in many other areas of the United States with which I am familiar—is that there is such a disparity between the plight of the industrial worker and the agricultural worker. I realize that certainly we must consider that the introduction of new industrial production into the consumer market is healthy. Also, that the produce of agriculure is not proportionately desired as the income of the consumer is increased. Man's appetite does not go up as does his paycheck, after he has attained a satisfactory level of sustenance. This is, I feel, one of the problems that we face. As agricultural production increases, we must be dependent upon population increases, foreign markets and the creation of new uses of agricultural production.

Therefore, I believe that the general agricultural economy will benefit from a more aggressive marketing of agricultural products on the foreign markets—even at less return possibly than for home consumption of the same products. A diversion of funds within the Agriculture Department from direct price supports to this end might possibly enable the reduction of our surplus stores. Possibly a stepped-up cooperation with the church and charitable distribution agencies could be worked out with the Government accepting a greater financial responsibility than at the present time. There certainly are depressed areas of the world that would benefit immeasurably from such humane charitableness. We must, however, be careful that our charitableness is not to an ostensibly distasteful degree. We cannot afford to swap food for goodwill. We must give food and accept that which comes as a matter of course. We need no more agonizing reappraisals in this regard.

My second interest lies in the development of more useful utilization of the agricultural production. This is an area of activity for both the private and governmental interest. The past has seen much from the Government to implement production. Now, we need a creative approach to research that will pave the way to a greater use of agriculture's produce. The long-run result of such a program will be helpful to stabilize the future.

So much for the future: Let us look to the present.

Here in Iowa we are concerned with pork and beef. In my native Southland, the concern is for cotton, tobacco, and perhaps rice and fruit. In the West there are other interests. Attempting to adjust to any program that will be fair to all is indeed a great difficulty. I think that before we adjust anywhere, we must know toward what we are working. We need a philosophy for agriculture in the United States. We have a great heritage in which, I feel, we can get a beginning. Our country developed because men were free. Free to own their own land, property, and personal effects. Out of this freedom came the reality of the family farm. Families formulated the great bulk of the agricultural work team. As farming became mechanized, family units became larger. This was as it should be. As men made fortunes in other areas, and as great companies accumulated wealth, they looked around for a place in which to invest. The Government made the investment in farms very enticing. This was through income-tax provisions—which were beneficial and fair to the family farm operator—but at the same time were of an even greater benefit to nonfarm investors. Now, much of the land is held by nonfarm operators. This is a deviation from the reality of the family farm as our heritage suggests to us.

I feel that some consideration should be given—by the Government—in its tax structure, to making the investment of wealth in farm properties for nonfarm people less attractive. Why should a man be allowed to write off his income in a profession to losses on another man's labor to his own benefit? Why not give the farm operator a fair opportunity in the farm market by eliminating the nonfarm bidder? We all know Iowa land is too high to operate with a proper return on investment. Is not the nonfarm ownership in part responsible for this disparity?

A second consideration for the present is that of production regulation. We are—to some extent—in difficulty because of the attempt to regulate at a point that regulation is impossible. The desire of man for greater gain will not be regulated by any mechanical, governmental system that is on a volunteer basis. Man volunteers to deprive himself from gain, only at a moral compulsion. Not many American farmers have that moral compulsion at the moment. Either there must be a program with the power of enforcement incorporated within, or there will be no adhering, in a significant way, to regulations for production.

I believe that an attempt to hinder the production is not only inhumane, but also un-Christian when we consider the world about us with its starving population. It may be that we must drop down the economic ladder a ways in order that we fulfill our moral responsibility to the world. Of course this is not a desirable goal. But, to guide the world toward the freedom and level of living that we know, we must of necessity show the way with willingness and

unselfish assistance. I do not favor the diversion of productive land to a state of inertia for the above stated reason.

I would think that if we could tackle the situation of ownership of the agricultural land by those who operate it in such a way as to make the family farm a reality again, we would see that the necessary adjustments in production would work out with the accepted law of supply and demand. Certainly, the efficient level of operation would be discovered and once again the agricultural needs of our country, and much of the world, would be met by free families operating their individual units without restriction or regulation. I firmly believe that our problem is not over production, but insufficient distribution; not too much Government assistance, but too little in the proper areas.

If we are to maintain our heritage of the family-farm operation, we would hope that there could be at the earliest possible date attention given to the beginning of such steps as are necessary, by the Government, with long-term credit, revision of the tax structure, exploration of all possible foreign markets, research for new uses of agricultural products, and immediate use of present surpluses for humanitarian relief in undeveloped areas as would begin us on the road to adjustment.

Accept my appreciation for your consideration of the ideas that have been running through my mind for many days. I know of your sincere interest in this matter which affects so directly your constituency of the 4th District from those of this country who support you in your good work.

Sincerely,

BANKS DOGGETT, Jr.,
Unionville, Iowa.

Upper Colorado River Project Would Damage the Nation's Agriculture

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1956

Mr. JACKSON. Mr. Speaker, the report of the Bureau of Reclamation shows that the crops to be grown on the upper Colorado scheme's participating irrigation projects will be largely grain and forage crops for dairy cows and sheep which will produce butter, milk products, and wool which are already in surplus and under Government subsidy and in storage at a fantastic cost.

The projects will service for the most part only marginal agricultural land much of it at high altitudes suffering frosts each month of the year and having a short growing season at best. Contrast this with the fact that there are at least 20 million acres of first-class land on existing farms in 19 States of the Middle West, South Atlantic, and Southern States that can be placed in production at any time they may be needed at a fraction of the cost. And contrast it with the further fact that Congress is now considering the soil-bank proposal which will take 40 million acres out of production.

The available land in the Middle West, South Atlantic, and Southern States for low-cost development has been listed by the Department of Agriculture as follows:

	Acres
Alabama	683,000
Arkansas	1,865,000
Florida	1,970,000
Georgia	1,721,000
Illinois	69,000
Indiana	135,000
Kentucky	170,000
Louisiana	2,769,000
Michigan	690,000
Minnesota	874,000
Mississippi	1,272,000
Missouri	323,000
New York	100,000
North Carolina	1,157,000
Ohio	95,000
Pennsylvania	90,000
South Carolina	996,000
Tennessee	242,000
Texas	3,928,000
Virginia	514,000
Wisconsin	316,000

From Reclamation Bureau reports, a table has been compiled showing the type of crops which would be grown on each of the 33 projects proposed in the overall scheme, and whether or not they are supported crops. The table follows:

Name of project	Acres to be irrigated	Crops to be grown	Crops supported
La Barge	7,970	Hay	
		Small grains	Yes.
		Pasture	
		Dairy cows	Yes.
		Sheep	Yes.
Seedskadee	60,720	Dairy cows	Yes.
		Sheep	Yes.
		Hay	
		Pasture	
		Small grains	Yes.
Lyman	40,600	Hay	
		Pasture	
		Small grains	Yes.
		Dairy cows	Yes.
		Beef cattle	
Silt	7,300	Alfalfa	
		Small grains	Yes.
		Sugar beets	Yes.
		Potatoes	
		Dairy cows	Yes.
		Beef cattle	
		Sheep	Yes.
Smith Fork	10,430	Hay	
		Small grains	Yes.
		Pasture	
		Dairy cows	Yes.
		Beef cattle	
Paonia	17,040	Grain	Yes.
		Fruit	
		Dairy cows	Yes.
		Beef cattle	
Florida	18,950	Dairy cows	Yes.
		Beef cattle	
		Small grains	Yes.
		Alfalfa	
Pine River	15,150	Dairy cows	Yes.
		Beef cattle	
		Hay	
		Small grains	Yes.
Emery County	24,080	Alfalfa	
		Grains	Yes.
		Beef cattle	
		Dairy cows	Yes.
		Fruit	
		Sheep	Yes.
Central Utah	60,380	Alfalfa	
		Grain	Yes.
		Fruit	
		Sugar beets	Yes.
		Dairy cows	Yes.
		Beef cattle	
		Sheep	Yes.
Hammond	3,670	Alfalfa	
		Grains	Yes.
		Beans	Yes.
		Fruit	
		Dairy cows	Yes.
		Sheep	Yes.
Gooseberry	16,400	Alfalfa	
		Pasture

What's the Matter With the Drought Relief Feed Program?

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 28, 1956

Mr. JOHNSON of Texas. Mr. President, everybody is talking about the farm problem, and here in the Senate we are trying to do something about it. We are all quite conscious of the farmer's plight. It is a confusing and vexing problem. We have not, however, heard all the stories.

The farm problem is particularly acute in the Southwest, Mr. President, where for the past 5 years the farmers and ranchers in Texas have suffered one of the worst droughts on record, along with the pressures of the cost-price squeeze.

During this period the Federal Government has taken steps to aid the drought-stricken farmer and rancher. The Federal drought-relief program was very beneficial to these people, but it now develops that these benefits—specifically the benefits received from the Government feed program—have been of an elusive character.

I call the attention of Senators to an editorial printed in the Texas Sheep and Goat Raiser magazine of February 1956. I am very concerned over the situation outlined in this editorial, and I ask unanimous consent that the editorial be printed in the Appendix of the RECORD:

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT'S THE MATTER WITH THE DROUGHT RELIEF FEED PROGRAM?

Reports from throughout the Southwest indicate that all is not rosy in the Government's drought relief feed program. Not only are many of the ranchmen and stock farmers confused—some are scared and will have nothing more to do with the program. Others are quite concerned because they have been asked to pay back to the Government that which they thought they were receiving under the relief program.

Many of the feed dealers have been under considerable pressure by Government investigators and according to their reports some of them are plenty tough and plenty rough. One or two feed dealers are known to be dropping out of the drought relief feed picture, and it is rumored that many are to have their permits to sell drought relief feed canceled in the immediate future because of varied and sundry deviations from printed instructions.

Much of the confusion existing in the industry at this time can be resolved by a centralization of focusing of the problems into one place where they can be studied and acted upon. It is doubtful whether the Federal or State Government will continue to push investigations which are imposing undue hardship upon either the feed dealer or the ranch people. The current situation, however, emphasizes that too little cooperative action—too little focusing of attention upon the problems confronting the dealers and growers.

Here is an outline, not too definite nor comprehensive but worth studying, of the situation at present:

In the late summer or early fall of 1954 the drought emergency feed program was established under which the Commodity Credit Corporation, through feed channels, made available to farmers and ranchmen feed from the Commodity Credit surplus stock at a discount of $1 per hundred pounds. The discount was handled through the FHA and ASC offices with purchase orders and dealers' certificates. The instruction that the feed dealers received from the ASC offices was very vague with the general idea being that the program was to be handled liberally in order that the farmer or ranchman might secure the utmost benefit from the program. No definite instruction was given to the feed dealer and each one was apparently left to interpret the instructions he received from the ASC office in his own manner.

This program went on for about a year, and about that time, the auditors began to appear and thoroughly check the records of the feed dealers, the apparent purpose being to enforce strictly certain rules that they had pertaining to the application of the program. It seems from reports that come in from areas where they have been working, that it is their purpose to disallow all the credits that they possibly can find a technicality to disallow. The procedure seems to be to charge back to the dealer anything that they can find any technical error in, and he in turn charges it back to the farmer or ranchman. Obviously, the dealer did not receive the credit and is therefore hardly in position to take the loss. On the other hand, the farmer or ranchman who did receive the credit is, in many cases, financially unable to take the loss. The local ASC offices were themselves so poorly informed as to the interpretation which the auditors would place upon the program that the information they gave to the dealers and the farmers and ranchmen was often misleading and led to more confusion. For instance, one ASC office was of the opinion that all purchase orders had been extended indefinitely and were valid until such time as they were specifically canceled out, presumably by auditors. Many dealers and ranchmen continued to use the orders in good faith at a time when, according to the auditors, they were no longer valid and many of these transactions were apparently being canceled out and the credits disallowed.

It would seem that in view of the confusion that resulted from the manner in which the program was set up and the poor and often inaccurate instructions that came from the ASC offices that the only fair way to correct the errors that had been made would be for someone to take retroactive action that would allow the credits which were disallowed because of technicalities and due to the ignorance of those who were participating in the program.

Now, we have a drought relief feed program.

We also have auditors and investigators.

Apparently we need some investigators to investigate the investigators.

The condition of this program today is not satisfactory.

Civil Defense

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. GARMATZ. Mr. Speaker, the Military Operations Subcommittee, of which I am a member, is holding hearings on the subject of civil defense, to lay the groundwork for needed revisions in the Federal civil-defense law.

There is a widespread belief in this country that civil defense is either futile against sudden massive assaults with nuclear weapons, or is hopelessly inadequate under present arrangements.

I am certainly of the opinion that civil defense offers a hope for the people of this country in terms of survival from bomb damage and that the people should be assured that adequate arrangements are being made for that purpose.

I believe that effective civil-defense measures can be taken if the need for them is sufficiently understood by the public. I personally intend to vote in favor of House Joint Resolution 98. This resolution was introduced earlier in the 84th Congress by Congressman HOLIFIELD, to constitute the Federal Civil Defense Administration, an executive department of the Federal Government, headed by a Secretary.

In connection with its hearings, the subcommittee chairman, Congressman HOLIFIELD, wrote to the mayors of cities considered critical target areas, requesting their views on the national civil defense efforts today, its defects and recommendations for overcoming them.

In my own city of Baltimore, Mayor D'Alesandro requested Col. Frank Milani, director of our civil-defense organization, to prepare a report for the committee. This report has received favorable comment throughout the country.

In the belief that it is of sufficient importance to be brought to the attention of the readers of the CONGRESSIONAL RECORD, I have asked permission to extend my remarks and have it inserted. I am also including some of the letters sent to Colonel Milani, commending him on his excellent report:

CIVIL DEFENSE ORGANIZATION,
Baltimore, Md., December 14, 1955.

Hon. THOMAS D'ALESANDRO, Jr.,
Mayor of Baltimore, City Hall, Baltimore, Md.

DEAR MAYOR D'ALESANDRO: Pursuant to your instructions, the following report is submitted.

Congressman HOLIFIELD's letter and the enclosures certainly have come at a most opportune time when we are endeavoring to solve the multitude of problems in civil defense in the light of the present weapons effects and those newer weapons which now must be given attention.

Like a great many of my colleagues all over the country, I feel the great weight of responsibility which lies upon us in these uncertain times and their implications.

As you probably know, we in Baltimore have pursued the problem vigorously for a long time. We have been concerned in ap-

proaching the problem of civil defense from a realistic viewpoint and we find a great variety of stumbling blocks in our path in the attempt at arriving at realistic solutions.

It is therefore my intention to set forth my thoughts on this major problem in the above light, conforming to the three major problems Congressman HOLIFIELD's letter has posed:

1. The national civil defense effort today.
2. Civil defense major defects.
3. A solution to overcome these defects.

For your convenience, I have grouped the defects and solutions following each other.

1. THE NATIONAL CIVIL DEFENSE EFFORT TODAY

A. The Federal Civil Defense Administration cannot be blamed wholly for the civil-defense situation as it exists today. The major error of civil defense in its early days was that its preparations were based on concepts of the last war. With this major strike against it, it has suffered from lack of proper coordination and planning as a result of a public law which is inadequate to meet its responsibility. This was the second strike. The third strike is a continuing one dealing with an appropriate funding program which has caused the agency to work on a piecemeal basis rather than facing the problem of head on.

B. While a fair appraisal of the national civil-defense effort since 1950 would indicate that some progress has been made, in total it is microscopic in the overall national security. In the light of its gigantic responsibility to the Nation, it has occupied only a minute place in our efforts toward possible survival. In short, we have gone to the basement for bargains and come back with exactly what we have paid for.

C. The total effort is summed up in the attitude of the American public toward civil defense which has erroneously been tagged as public apathy. I do not subscribe to that viewpoint. Rather, in my opinion, there is indicated a lack of vigorous leadership in the entire Federal civil defense agency who are charged with producing a realistic civil-defense program and the public by its attitude has indicated a vote of no confidence in its operation. Couple this with the natural desire of the people for a peaceful era to which we all subscribe, and you end up with a general let-George-do-it complex. We must recognize that the American people need and want education, not propaganda. We recognize that America and its people have never been subjected to live frontiers, that they have lived in a vacuum of isolationism for a century and a half. These frontiers have been defined for us. We must make our people understand about air oceans which do not present any impediment to an aggressor. In short, we must take the public into our confidence, spare nothing. We recognize the aspirations and hopes of the American people and react in accordance with those aspirations and hopes. The overriding desire for peace, and with it a tendency on the part of the people to play at a peace game as though it were a reality and here now, must be recognized. Pure propaganda to turn this trend around won't do it. Scare speeches and frightening totals of destruction in the event of hydrogen attack won't do it, for Americans don't scare easily.

2. CIVIL DEFENSE MAJOR DEFECTS AND SUGGESTED SOLUTIONS

Defect A: An anticipated public law which does not conform with the responsibility brought about by the atomic-hydrogen age and a civil defense within the security structure which will play its part as a deterrent to war. Within 10 years from the discovery of A and H bombs, nuclear weapons have developed into an immediate threat to the millions who live in our industrial complex and a potential menace to the biological future of the human race. The problem is now so vast that both military and civil defense against nuclear assault bear four major facets all closely integrated and dependent upon each other: (a) the threat of retaliation; (b) early warning and interception of bomb carriers; (c) evacuation of cities in the path of assault; and (d) reduction of vulnerability by peacetime dispersal of population and industry. These four when taken together while not promising absolute security in the atomic age can, however, establish and maintain for a number of years a highly unstable and precarious status quo in which outbreak of war will be made unlikely by the terrible risk the aggressor takes in unleashing it. This is a status quo in which our Nation may continue to spend a large part of its national income building weapons of mass destruction, erecting more and more elaborate electronic curtains around the American continent and shaping the political and economic life so as best to survive in a blow-up that may occur at any moment.

Solution A: (1) The Federal civil-defense agency must be given a dignified position in the governmental structure commensurate with its mission. If it is true that it must be considered a fourth arm of our national-security structure, then other agencies of Government and the Congress must recognize it as such.

(2) The Federal Civil Defense Act of 1950 should be completely overhauled and provide for, among other things, the reorganization of the Federal Civil Defense Administration internally after transfer of its responsibility and functioning within the framework of the Department of Defense. The top-level staffs of this reorganized agency should be sought not only from recognized civil-service lists but sought for their knowledge in their particular fields. This recognized agency, as the Department of Civil Defense, on a co-equal basis with the Army, Navy, and Air Force headed by a civilian Secretary of Civil Defense, should have representation on the Joint Chiefs of Staff and National Security Council.

Defect B: Lack of a national master disaster plan to mitigate and recover from the effects of nuclea rassault. At present, numerous bulletins and circulars are fed like crumbs to starving pigeons. The result is a conglomeration of virtually hundreds of uncoordinated plans, not even speaking the same professional language.

Solution B: The buildup of a national master disaster plan should be effected at an early date. Upon such a plan the State can base its planning on realistic and adequate information and in turn the local civil-defense authority do the same, thus creating a national pattern. The Federal agency could then more closely estimate its financial needs and approach Congress for the realistic budget which it merits.

Defect C: Lack of Federal positive leadership in moving away from parochial planning based upon political jurisdictional lines.

Solution C: Revision and enactment of legislation and issuance of regulations which will conform to the needs of a modern civil defense. The principal needs are:

(1) A number of mandatory features which will make local civil-defense organizations within a target complex fulfill civil-defense requirements. The hydrogen weapon has not yet recognized home rule.

(2) Legislation and/or regulations should point up the need of organizing critical target complexes upon an areawide basis. Hydrogen weapons and the yet to come inter-continental ballistics missiles, plus fallout implications, have outmoded the concept that each target city and the surrounding counties can afford the luxury of "going it alone," nor can dependency be placed on outmoded systems of so-called mutual aid. The need here is for whole groups of counties tightly knit together to act under one plan, and under single direction as an authority. This is nothing new in the life of urban administration—more an more of the urban everyday problems are finding the answer in the same field of authorities.

(3) The director, being locally appointed by the combined counties and target city, will be able to coordinate all civil-defense measures for the authority area, thus leaving the State to function in its proper capacity of coordination. The director is then in a position not only to carry out more effectvely preattack organization, training, and usage of existing resources, but he will be in a position to make an impact in the event of war-caused or natural disaster peculiar to the local situation.

Defect D: The volunteer system upon which civil defense has been created.

Solution D: (1) the use of virtually a total volunteer system in long-range civil defense planning is unrealistic and fails to recognize its inherent weaknesses.

(2) The use of volunteers should be limited in the preattack phase to cadre requirements. For example, if you need an eight-man team, in any service, secure one man, train him and assign him. When the time comes, if it ever does, surround him with seven others even though untrained. These eight men would create a greater impact at the time of disaster than the present system of "paper volunteers," who neither respond to training sessions nor have the enthusiasm to remain in civil defense. The volunteer civil defense corps structure, as we must design it, is incapable of holdng and training great masses of volunteers. It is, therefore, necessary that we devise a civil defense corps similar to the National Guard of the State to be administered by the local authority, all in cadre form, or if possible, a system built up from the selective service system which would make the civil defense corps selective.

(3) The civil defense corps should be authorized a minimum of 12 training periods per year, paid for by the Federal Government. Attendance at authorized civil defense schools and courses should be at Federal expense. The average target area, such as Baltimore, would require 50,000 volunteers to overcome a disaster of the scope envisioned. Ten percent of this total should be authorized for recruitment in cadre form throughout the area. With 5,000 selected, reasonably well-trained and controlled volunteers, the civil defense organization could make an impact upon a disaster situation and we may then reasonably assume "we could come off the floor fighting."

(4) The revised law should provide for the use of certain categories of older reserve and retired personnel of the Armed Forces for staff planning and assignment to keep positions in disaster control. We are wasting a wealth of readily available talent when we are forced to use untrained and inexperienced personnel in specialized fields.

Defect E: Public acceptance or nonacceptance of a civil-defense system.

Solution E: (1) I have attempted to point out at the beginning of my letter some of the more pressing problems on this defect. To solve them will require a thoroughly well-organized public education program in civil-defense, away and beyond the mere passing out of the too-few public information pamphlets issued to date. Even the job of public information pamphlets should be multiplied a thousandfold, and furnished to local authorities without cost and providing a postage-free method of distribution.

(2) The local civil-defense agency is incapable of doing a mass education job of this magnitude by itself—it must have Federal and State assistance in abundance, not driblets. The cost of such a program should be borne from Federal funds. Just enough leeway should be given the State and target

area so as to conform with its local peculiar needs. What is vital is that a start—an integrated, reasoned start—be made without delay and that we abandon the present half-hearted, haphazard methods of public education.

(3) Specifically, the greatest medium for education of the public is at our disposal—television. The World War II concept of holding meetings and gatherings to educate has long been outmoded, yet locally we cling to it as a drowning man to a straw. We must bring the school of civil defense education into the living room of every home. Programs must be designed which are simple and to the point, with enough interest and warmth to hold the viewer, whether adult or child. The pressure idea should be avoided as a plague. Fanfare and showmanship have no place in civil defense. Dignity and maturity of purpose must be the keynote. This kind of approach cannot be left to local capabilities which are limited in financial capabilities and moreover, should be part of a nationwide integrated program.

(4) If we do the kind of public education job which is acceptable to the public, we will automatically be giving basic civil defense training to those who, at a later date, may become members of the Civil Defense Corps, thus the entire American public becomes a potential pool of partially trained civil-defense volunteers. The educational program should be designed with this in mind. It can be fitted to the needs of the family unit to safeguard itself and yet automatically absorb the basic training needs of the volunteer.

Defect F: Unrealism in spreading a modern civil-defense equally in the 48 States when we know that our survival is dependent upon a relatively small number of complexes termed "critical target areas."

Solution F: The Federal agency must exercise forthrightness in informing the public of the necessity to concentrate the major portion of our civil-defense energies on the designated critical target complexes, for herein lie our strength and industrial power to sustain the whole Nation and to give us the chance for maximum survival. There is little or no point in selecting noncritical areas for major civil-defense effort or to designate areas known to be of a very low target evaluation, merely because the Bureau of the Census by its own necessary criteria includes such areas within the scope of its terminology. It is absolutely essential that we husband our civil-defense energies and that the public be taken into civil-defense confidence, and told the facts of life.

Defect G: Unrealism in placing the major responsibility of civil-defense operations upon the local level, where it belongs, and allowing these localities virtually to shift for themselves.

Solution G: A closer relationship must exist between the Federal agency and local civil defense, with less chain of command paperwork and more chain of command personal contact. While the role of the State is clearly one of coordination, general guidance and administrative control over Federal and State funds, there must be a closer and more direct relationship between the Federal agency and the critical-target area. For the sake of the target area, the director and his staff must possess direct access at least to field offices of the Federal Civil Defense Agency. The planning and operating in mitigating and recovery functions must and will devolve upon the target area and it is patently necessary that, with a National master disaster plan in existence, the critical target area should be in a position of close contact and coordination with Federal civil-defense field offices for preattack planning if the local target-area staff is not to be submerged by the State.

Defect H: Lack of vigorous Federal leadership in bringing business and industry into the civil-defense program from top management level as coequal partners in solving the problem of continuity of industrial capability.

Solution H: (1) Civil defense must and will fail miserably, no matter how well administered or by whom, unless business and industry is in full support of civil defense, in fact as well as vocally.

(2) The labor force involved in our economic and industrial system is so closely allied outside the store, office, or factory to the total civil-defense problem that business and industry cannot afford to stand aloof, awaiting a trumpet call from some unknown and mysterious source.

(3) Business and industry must be assured from a Federal level that civil defense in a plant does not mean the outlay of great sums of money. It must be assured that while the Federal Government supports and urges industrial dispersal, it does so on the basis of feasibility and practicability. It must be assured that in cooperating to the extent of preparation in the expansion of existing plant-protection programs, it does so primarily for its own benefit. The appropriate Federal agencies must be responsible for assuring top industrial management, if necessary industry by industry, if the plant-security program of civil defense is to be solved at the local level.

Defect I: Failure to recognize that nuclear assault upon our cities in itself is a complicated matter and that local authorities do not possess the resources to maintain adequate staffs.

Solution I: In this particular defect is revealed the total inadequacy of the present Public Law 920 which prohibits the use of Federal funds for administrative purposes. If we are to overcome this crack in the civil-defense dike we had better take another good hard look at this part of the Federal law and make some rapid changes to:

(1) Allow for use by the critical target areas the funds to share in the cost of employing the necessary key disaster control personnel in each of the critical target areas. Here again the dormant talent of retired and noncritical Reserve officer personnel should be encouraged to turn to the problem of civil defense at the local level. With adequate funds these officers could be utilized almost on the same level as duty with active forces at a fraction of the cost.

(2) Experience has proved that the Federal Government would be sharing to a greater degree in its responsibility to the local level by a major share in maintaining these staffs on the basis of monetary and operational support than by standing at a considerable distance on the sideline. The expenditure involved would be a small price to pay for disaster control insurance for the United States.

(3) The core of these disaster control staffs, which must be prepared to function rapidly, must be on the ground to plan, to train and to operate, and by leavening the staff with personnel from local divisions of government, plus a volunteer segment, the maximum capabilities possible is secured.

Defect J: Failure to give top priority to local civil defense access to Federal surplus property and material.

Solution J: A prime example of local civil defense blocks is the problem of logistical support of civil defense. The requirement of civil defense funding for purchase of needed equipment for preattack training and stockpiling is far beyond the means of the average city government. Yet the means for satisfying many of these needs are available from the immense quantities of Federal surplus property. Without delay the pending bill in Congress should be passed, or included in a revision of Public Law 920, which will give top priority to the local civil defense organizations to acquire such property wherever it may be found.

Defect K: The antiquated and unrealistic policy of placing major reliance upon existing agencies of local government for the bulk of preattack civil defense planning in their spheres.

Solution K: The theory of utilizing city and county resources and manpower at the time of war-caused or natural disaster is a separate problem from that of preattack planning by agencies of local government. The actual use of manpower and material existing at local government level for planning, training, and administration has been assumed by the Federal Civil Defense Administration as simply there for the taking at any time. Nothing can be further from the truth. The truth is that such factors as interdepartmental cost accounting which any well-managed city or county carries on has not been taken into consideration. Local government budgets do not provide for such excess expenditures by the various departments. Personnel problems to carry out day-to-day city service functions are acute and existing staffs overburdened now. It is therefore my view that:

(1) Local government resources and manpower should be considered as available to civil defense only at the time of disaster on the same scale as any other private or industrial manpower and resource availability.

(2) To begin with, these resources when carefully analyzed, plus the possible loss in manpower and resources as a result of disaster, comprise only a very small percent of the total requirement. Too great a stress has been placed upon its utilization, thus blinding us to the true facts. The Federal Civil Defense Administration and State policy of utilizing existing local government agencies and resources upon which to build the whole local civil defense structure should be limited to integrating these resources in manpower, equipment, and facilities for disaster operations only. For preattack purposes of organizing, planning, and training, the problems involved should not be made a requirement to be shouldered by the separate divisions of city government unless a department or departments actually possess the capability as has been the case in some departments of Baltimore City.

(3) Present Federal and State laws should be revised so as to permit the Federal Civil Defense Agency and the State to participate with critical target areas in funds for administrative, planning, and operational costs, backed up by the logical integration of the organized available manpower and resources at the time of disaster.

Defect L: A poorly conceived matching fund program.

Solution L: The entire matching fund program should be revised in the light of the several recommendations made herein. The keynote of such a revision should be flexibility in administering the funds.

Defect M: Overriding recognition by the Federal Civil Defense Administration of State prerogatives, to the extent of submerging the critical target city operations in many cases.

Solution M: The local civil defense organization has been submerged by present Federal policies of dealing with State and local civil defense organizations. The job of mitigating and recovering from effects of as assault on a critical target city is the responsibility, in the final analysis, of the local authority. To plan for and be ready to operate in the event of disaster there must be close relationship between the critical target area and the Federal agency and its field staffs for preattack planning purposes. This in no way violates the chain of command through the State, but rather will tend to lay the groundwork for better understanding and operations at the time of disaster. thus tending to bring back the

critical target area into proper focus in the civil defense picture.

SUMMARY

Elmer Davis in the American Scholar recently said: "This is a time of peril; we need the best leadership we can get, and also the best informed followership—if we are going to dig our way out." He might have followed it up by adding "out of the morass of civil-defense darkness."

The very wording of Public Law 920 indicates on open sesame for the divestment of responsible leadership. Somewhere along the line the notion that local government does not want any part of State or Federal "on the ground leadership" was born. Federal civil defense has consistently refused to come up with an overall master disaster plan for the country as a whole. The result of such a notion is that there are 49 plans for States, 70 or more for separate critical target areas, and virtually hundreds more by cities or counties across the country. How can an "informed followership" be secured under such circumstances?

Admittedly, civil defense has made a degree of progress since the inception of Federal Civil Defense Administration in 1950. Were we confronted with the civil-defense problems of the 1942 blockbuster, we could afford the luxury of patting ourselves on the back for a job well done under trying conditions. However, we are in no position to afford the luxury of laissez faire conduct under thermonuclear and intercontinental ballistic missiles considerations. Admittedly again, through no fault of the Federal Civil Defense Administration, we have lost at least one whole year in planning for the problem of radioactive fallout. We have been given a national evacuation policy as a result of increased weapons yield without the necessary technical information to plan realistically. Only recently has some action been provided in this particular field.

Civil defense, as now constituted, cannot and will not make any appreciable impact against a massive war-caused disaster. Until some rapid remedial measures are taken to offset the conditions as they exist today in civil defense, we may be in for a rude awakening should we be so unfortunate as to be on the receiving end of a massive air assault by thermonuclear or guided missiles weapons. Right now the best we can say for American civil defense is that it is on paper, such as it may be. Time is no longer on our side. The hour glass has run its course.

With reference to the two enclosures, House Joint Resolution 98 and House Concurrent Resolution 108, I believe I have covered these in the body of my letter.

Of necessity, this is a long answer to three major problems. However, I believe you wanted a forthright viewpoint.

Sincerely,

FRANK MILANI, *Director.*

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
COMMITTEE ON GOVERNMENT OPERATIONS,
Washington, D. C., January 25, 1956.

Hon. THOMAS D'ALESANDRO, Jr.,
Mayor, City of Baltimore,
Baltimore, Md.

DEAR MAYOR D'ALESANDRO: Thank you for your letter of December 16 transmitting the very excellent report of your civil defense director, Col. Frank Milani.

I am sure you are aware of the wide distribution and general acclaim which Colonel Milani's report has enjoyed throughout the country. We have secured a supply of copies which we are distributing to members of our subcommittee. I believe that every interested person should have an opportunity to read Colonel Milani's penetrating comments. I want also to express our appreciation for the cooperation which Colonel Milani and his staff have extended to the subcommittee in recent months. If it is at all possible I hope that our hearing schedule will make it possible for us to meet with you and your staff personally. Please advise me if you wish further details of this subcommittee's hearing program.

Sincerely yours,

CHET HOLIFIELD,
Chairman, Military Operations Subcommittee of the Committee on Government Operations.

CIVIL DEFENSE,
WHEELING-OHIO COUNTY CHAPTER,
OFFICE OF THE DIRECTOR,
February 3, 1956.

Mr. FRANK MILANI,
Director, Civil Defense Organization,
Baltimore, Md.

DEAR MR. MILANI: Received a copy of your detailed report dated December 14, 1956, addressed to Hon. Thomas D'Alesandro, Jr., Mayor of Baltimore, and I want to compliment you on this excellent writing on the civil defense situation.

Some of the civil defense problems we have been experiencing in this area, are well expressed in your report, and I agree with the point of view you have so well written.

If you have any additional copies of this report, will appreciate your mailing me 1 or 2 copies of same.

I again congratulate you on this fine report, and am sure that other civil defense directors who received copies, enjoyed reading this constructive analysis on civil defense problems.

Very truly yours,

JOHN J. CROCK,
Director, Wheeling-Ohio County Civil Defense.

OFFICE OF DIRECTOR
OF CIVIL DEFENSE,
MONTGOMERY COUNTY, MD.,
COUNTY BUILDING,
Rockville, Md., January 17, 1956.

Mr. FRANK MILANI,
Director of Civil Defense,
Baltimore, Md.

DEAR FRANK: Thank you very much for the copy of your report to Mayor D'Alesandro and for the copy of your budget figures as well. The latter by comparison may stir our "powers that be" to greater generosity?

The report to the Mayor was eloquent, forceful, and pointed up some glaring deficiencies. I recognize that you did not consider it a panacea for all of our ailments. However, someone must focus attention on our sickness or the proper cures never would be forthcoming. Sorry indeed that I find myself unable to take an optimistic viewpoint toward all the faults getting fixed, but nevertheless, thank you for sending me a copy of your diagnosis, Doctor.

Cordially yours

G. ROY HARTWIG,
Deputy Director of Civil Defense.

KENT COUNTY CIVIL DEFENSE,
OFFICE OF CIVIL DEFENSE,
Grand Rapids, Mich., January 16, 1956.

Mr. FRANK MILANI,
Director, Civil Defense Organization,
Baltimore, Md.

DEAR MR. MILANI: We are in receipt of your mimeographed report on civil defense to Hon. Thomas D'Alesandro, Jr., mayor of the city of Baltimore, Md.

We have read this report with a great deal of interest. We particularly like that section of your report on pages 7 and 8, under section K, as we have long felt that civil defense cannot be built up satisfactorily around governmental units. This has been the policy of the Michigan Office of Civil Defense under Director C. F. Van Blankenstein, who recently resigned to work for Federal Civil Defense Administration, Region IV.

You certainly devoted a lot of time, thought and energy to this report, and it is our sincere hope that something will come from some of these suggestions. We know that Congressman HOLIFIELD has been most interested in civil defense, as well as Senators KEFAUVER, HUMPHREY, and others whom we do not recall at the moment.

We do not wholly agree with you on the Federal Government paying administrative costs at the local level, as we still believe we should have a fair degree of autonomy at the local level.

It would be appreciated if you could make arrangements to send us half a dozen more copies of your report for distribution locally. We understand that Colonel Gault is your deputy director and we remember him well from the Staff College at Olney, Md., in 1951, and we corresponded with him on a few occasions while he was civil defense director in Dayton, Ohio. It would be appreciated if you would convey our best wishes to Colonel Gault.

Most sincerely.

DANIEL R. WATERS,
Executive Secretary, Kent County Civil Defense.

CIVIL DEFENSE COUNCIL,
Philadelphia, Pa., January 12, 1956.

Mr. FRANK MILANI,
Director, Civil Defense Organization,
Baltimore, Md.

DEAR FRANK: Thank you very much for a copy of the very fine report which you submitted to your mayor. It was one of the best statements concerning civil-defense problems I have yet read.

The one which we prepared for Mayor Clark was nowhere nearly as detailed. A copy of Mayor Clark's reply is attached for your information.

May I say that I think you have done a great deal to help the civil-defense cause by your presentation and I hope that Mayor D'Alesandro, Jr., is aware of the good work which you have done in the preparation of the document.

Kindest regards.

Cordially,

PAUL B. HARTENSTEIN,
Executive Director.

OFFICE OF CIVIL DEFENSE,
CITY OF MINNEAPOLIS,
January 11, 1956.

Mr. FRANK MILANI,
Civil Defense Director,
Baltimore, Md.

DEAR FRANK: I have read and appreciated the copy of your letter to Mayor D'Alesandro concerning Congressman HOLIFIELD's request. We, too, were requested to answer this letter and as soon as I have some copies of my reply multilithed I will send you one. However, let me say that I was very happy to find that our thinking was very much the same and that the picture of the national civil defense is beginning to crystallize to a point that I believe that something can be done about it.

I believe that we disagree only in one instance, and that although I am in favor of the establishment of the FCDA on a higher basis in government, I do not agree that the Department of Defense is the proper place for it. Rather, it should hold a Cabinet position of its own and not get fouled up in the business of competing with the other three services. I indicated my reasoning on this manner in the letter which you will receive shortly.

Thank you for sending us your report and I am very happy to see such good substantial thinking being done in relation to civil de-

fense in your community. Hoping to see you again soon at some national meeting.

Sincerely yours,

WALTER P. HALSTEAD,
Executive Director, Minneapolis Office of Civil Defense.

COUNTY OF MILWAUKEE,
OFFICE OF CIVIL DEFENSE, COURTHOUSE,
Milwaukee, Wis., January 5, 1956.

Mr. FRANK MILANI,
Director, Civil Defense Organization,
Baltimore, Md.

DEAR MR. MILANI: Thank you very much for your letter of December 14, 1955, regarding your views on matters as expressed in Congressman HOLIFIELD's letter. I think they are very interesting and to the point and sincerely hope that Mr. HOLIFIELD will be able to incorporate some of them in any forthcoming civil-defense legislation.

I am especially interested in your appraisal of Public Law 920, and agree with you that the act is archaic and was not conceived to cover the type of emergency that will undoubtedly exist in the event of a hydrogen-bomb attack. Having been a member of the Air Force Board during World War II and having worked on the development of bombing planning, I thoroughly understand your statement that the hydrogen bomb does not respect "home rule."

I think that if enough of us get together and make our views known on the points that you have covered in your letter, that we may be able to accomplish something. I think that we should employ all media to this purpose and in particular the United States Civil Defense Council which, as you may recall, started out as a more or less legitimate group of civil-defense directors, but which has, to some degree at least, shown evidence of being dominated or absorbed by FCDA, and in so doing will lose, to a great degree, its independent status. I have always felt that there is a great need for an organization of this type as it is a voice outside of Government and if properly used, can be a potent instrument for civil defense.

I could make use of about six more copies of your letter if you have them available and would appreciate your sending them to me. In the meantime if there is anything that I can do for you on the Milwaukee front, or otherwise, please do not hesitate to call on me.

Very sincerely,

GEORGE W. CARNACHAN,
Civil Defense Coordinator.

CIVIL DEFENSE CORPS,
BIRMINGHAM-JEFFERSON COUNTY,
Birmingham, Ala., January 3, 1956.

Mr. FRANK MILANI,
Civil Defense Director,
Baltimore, Md.

DEAR MR. MILANI: Thanks very much for copy of letter dated December 14 to your mayor in reply to communication received from Congressman HOLIFIELD requesting appraisal of our present civil-defense organization.

At the time of receipt of your letter I was preparing an answer to Mayor Morgan of our city to Congressman HOLIFIELD's letter. I have read over your letter very carefully several times and in my opinion you have covered the situation in a most outstanding manner and I agree with you 100 percent on every issue you have brought up and the solutions thereto. The idea of education of civil-defense personnel over TV might seem radical to many not familiar with the problems we face. After 4 years struggling with civil defense, I am convinced that we cannot enroll masses of people and give them the classroom training necessary for them to perform effectively in time of disaster.

I have taken the liberty of incorporating quite a bit of your letter into my reply to the mayor. It was so well written that it seemed impossible for me to take the same idea and change it. I sincerely hope you don't mind. As a matter of fact, I believe that every director that concurs with your thinking 100 percent could write an identical letter to his Congressman and Senator that would have very effective results, as most advertising managers tell us any idea repeated long enough and to enough people will produce results. Therefore, it might be smart for us to be pouring in more information to our Senators and Congressmen. If you have not already done so, permit me to suggest that you send a copy of the letter sent to me to the directors of the 70 critical target areas with the request that they write a similar letter to their Congressmen and Senators.

Wishing you a very happy and prosperous New Year, I am,

Sincerely,

U. N. JAMES, *Director.*

CITY OF KANSAS CITY,
CIVIL DEFENSE DEPARTMENT,
Kansas City, Mo., December 30, 1955.

Subject: Report of December 14, 1955, to the mayor of Baltimore on civil-defense status.

Mr. FRANK MILANI,
Civil Defense Director,
Baltimore, Md.

DEAR FRANK: We have read your report with a great deal of interest several times over and I believe it is the best thing I have ever seen on the subject.

You are to be congratulated upon your keen analysis of the entire situation. However, having known you for so many years, I wouldn't expect less.

Particularly, I appreciate your comments on the use of surplus property which has been denied us. Your calling attention to the necessity of shortening the chain of command and cutting out the State office is very well stated. In fact, there is nothing I disagree with.

I should like to have a dozen copies if you could spare them as I want to give them to each of my deputies in order that I can use it as material for talks supporting our budget and other civil-defense projects.

Wishing you the best of everything including a happy 1956, I remain,

Yours sincerely,

C. O. THRASHER, *Director.*

The Upper Colorado River Storage Project Threatens California's Water Rights

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. SHEPPARD. Mr. Speaker, in a statement introduced in the Appendix of the RECORD Congressman ENGLE has alleged that the testimony of California witnesses proves that the Colorado River project will not threaten California's water rights. To reach this position, which is diametrically opposed to the conclusions reached by these witnesses, Congressman ENGLE on the one hand has relied upon quotations taken out of context, while on the other he has ignored those parts of the testimony which point out the serious danger in the upper basin project to the State's water rights.

Not only are Mr. ENGLE'S conclusions at odds with those of the legal and engineering experts upon whom he seeks to rely, but they are directly contrary to the official position of the Legislature of California, the State's attorney general, and the Colorado River Board.

Assembly Joint Resolution 37, enacted by the California State Legislature last May, is as follows:

Assembly Joint Resolution 37

Joint resolution relative to memorializing the Congress of the United States in relation to pending legislation affecting the waters of the Colorado River

Whereas more than 6 million people of this State depend upon the Colorado River as an important source of water for irrigation, domestic and industrial needs; and

Whereas the metropolitan area of southern California, including Los Angeles, San Diego, and some 60 other cities depend on the Colorado River for water and hydroelectric power; and

Whereas the Colorado River is the sole source of water to irrigate over 1 million acres of land in this State; and

Whereas legislation is now pending in the Congress of the United States to authorize the construction of two major power and irrigation projects in the upper basin of the Colorado River at an estimated total cost approximating $1,750,000,000; and

Whereas one of these projects as contemplated by S. 500, H. R. 270, and companion bills, known as the Colorado River storage project, includes (1) the construction of 6 large dams creating reservoirs with an aggregate storage capacity of 44 million acre-feet, and (2) the construction of 14 or more irrigation projects known as participating projects; and

Whereas these storage dams are not required to serve the proposed irrigation projects but would store water for power purposes under interpretations of the Colorado River compact now being defended against by California in the United States Supreme Court in *Arizona* v. *California et al.;* and

Whereas the major irrigation participating projects are very costly transmountain diversion projects to take large amounts of the highest quality water out of the Colorado River Basin to other river basins; and

Whereas the other project, as contemplated by S. 300 and H. R. 412, and known as the Fryingpan-Arkansas project, is also a very costly transmountain diversion project to take the best quality water out of the Colorado River basin to the Arkansas River basin, and is the initial phase of a project to divert 900,000 acre-feet of water per annum out of the Colorado River Basin; and

Whereas both of these projects are based upon interpretations of the Colorado River compact which are now at issue before the Supreme Court of the United States in the case of *Arizona* v. *California et al.;* and

Whereas these projects, if constructed under those interpretations, would be detrimental to both the quality and quantity of water to which California has rights long established by prior appropriation as well as by contracts with the Federal Government for projects now constructed; and

Whereas both proposed projects are based upon questionable standards of financial feasibility and if constructed would cost the taxpayers of our Nation several billion dollars in the form of a subsidy to the lands which would be irrigated; and

Whereas California is the second largest taxpaying State in the Nation, and would therefore be doubly injured if these projects were authorized both by the impairment of the quality and quantity of water to which existing California projects have established rights, and by the burden of a tremendous taxload: Now, therefore, be it

Resolved by the Assembly and the Senate of the State of California (jointly), That the

Congress of the United States be and it is hereby respectfully memorialized and urged to suspend further consideration of legislation authorizing the Colorado storage project and participating projects, and legislation authorizing the Fryingpan-Arkansas project until the Supreme Court decides the case now before it; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States, the President of the Senate of the United States, the Speaker of the House of Representatives of the United States, and to each Senator and Representative from California in the Congress of the United States.

The State's attorney general, Hon. Edmund G. (Pat) Brown, stated as follows on February 24, 1956:

In the interest of sound reclamation and sound national economy, the upper Colorado River project bill ought to be decisively defeated. I understand that it is scheduled to come up for a vote in the House of Representatives during the week of February 26.

I am convinced that the upper Colorado River project bill as it is being presented to Congress will adversely affect California's vitally important water rights on the Colorado River.

The office of the attorney general now is engaged in defending California's water rights on the Colorado River in a suit pending before the Supreme Court. With this suit in progress, certainly every other precaution also must be taken to protect California's rights on the Colorado River from harmful legislative measures. I believe the upper Colorado River project bill constitutes such a threat.

There are other basic reasons why the bill should not be adopted. Certainly it is inconsistent for our good neighbors in the upper Colorado River Basin to press for a bill that would bring hundreds of thousands of acres of land into crop production at a time when Congress is faced with the plan to pay farmers billions of dollars to withdraw some 40 million acres of farmland from crop production.

I am convinced that there is no justification for the passage of the upper Colorado River project bill at this session of Congress.

The argument advanced by the gentleman from California [Mr. ENGLE] in rationalization of his own position is not a new one. He first advanced it in March 1955, during the House Interior Committee hearings upon the Colorado River storage project on cross-examination of the California witnesses. It was fully and effectively answered at that time—see House hearings on H. R. 3383, pages 977–992.

The following colloquies are illustrative. At page 982:

Mr. ENGLE. If I correctly interpret that statement, it means that this Congress could authorize, and the Bureau of Reclamation could build, all of these participating projects without the impairing by as much as one bucketful the water to which California is entitled under the Colorado River project.

Mr. ELY. Subject to two qualifications: First, if they were built without the construction of storage works which would intercept our water supply; second, to the degree that they do not involve transmountain diversions which would impair the quality of water.

* * * * * *

Mr. ELY. Bear in mind two things, Mr. ENGLE: First, quality of water, which we reserve at all times under article 8 of the Colorado River compact; and, second, in all of my answers to you, you and I are both dealing in complete ignorance of the claims of the United States for the use of Indians and as to whether they would be adjudicated to be ahead of the compact and outside of the compact. If they are, then no answer I give you can have any validity whatever because none of us know how much water the upper basin or lower basin would have coming to them after the satisfaction of those rights.

At page 989:

Mr. ENGLE. All I am asking is, Do I interpret that statement correctly, that the State of California and the Colorado River Board regard Glen Canyon, standing by itself, as a sound project?

Mr. ELY. Not as proposed; no, sir. May I explain?

Mr. ENGLE. Yes, if you can explain that; go ahead.

Mr. ELY. In Glen Canyon, as proposed, the financial setup is based upon the assumption there may be withheld from the lower basin and accumulated in storage for power generation at Glen Canyon, water which may not lawfully be held there under the Colorado River compact. Such water must be released to the lower basin and is not available for power generation at Glen Canyon. That is point 1. Point 2: The 6-mill rate proposed here is not realistic. This project is not sound economically.

At page 991:

Mr. ELY. The storage project would be constructed, operated, and filled on the assumption that the upper basin may retain in storage during the filling period, which is about 20 years, some two to three million acre-feet per year that we say the lower basin is entitled to receive. It withholds that from us. That is the consequence during the filling period. There would be a consequent reduction in the quantity of water available for consumptive use in the lower basin in violation of the power contracts. I am still speaking of the filling period. After the reservoirs are filled, then the consequences depend upon the rate of development of the consumptive use in the upper basin.

The plans of the Bureau of Reclamation contained in House Document 364 are based upon the assumption that the ultimate consumptive use planned by section 2 of the bill will be at the rate of 9,500,000 acre-feet in extreme years and will average 7½ million and be calculated upon depletion instead of consumption at the site of use. That means a permanent deprivation of water from the lower basin of about 2 million acre-feet, taking into account the further consequences of the Mexican Treaty.

So my answer to you is, sir, that the effect of this project is immediate in withholding from the lower basin 2 million acre-feet or more per year to which we are entitled as soon as the gates are closed at Glen Canyon. That situation will prevail during the entire filling period. It will recur thereafter to the extent that the upper basin is developed in accordance with the plans presented in the project before you.

The burden of the reports of the State engineer and of the statements of California witnesses was that the reports on which the upper basin project were planned gave no proper or adequate consideration to the interest of the lower basin States, and that the project was planned on erroneous interpretations of the Colorado River compact, all of which cut California's rights seriously, and that the project should proceed only, first, if there were assurances that these rights were not impaired, and second, if the project could qualify under proper criteria of feasibility and repayment. The project fails in both respects.

In these circumstances it was the absolute responsibility of the representatives of the State and the agencies affected to point out these grave failures to the committee. This was done by Fred Simpson, chairman of the Colorado River Board of California; by board members Evan T. Hewes and Samuel B. Morris; by General Counsel James H. Howard for the Metropolitan Water District who also represented Joseph Jensen, member of the Colorado River Board; by Ben Griffith, president of the Board of Water and Power Commissioners of the City of Los Angeles and Gilmore Tillman as counsel for the city; as well as by Raymond Matthew and Northcutt Ely, engineer and counsel for the board respectively, the two persons whom Mr. Engle singles out in his attack.

To bear out the concern and objections voiced by these representatives, there is now at hand an independent engineering report on lower basin water supply entitled "Report on Water Supply for Probable Future Developments in the San Diego County Water Authority, September 1955." One of the engineers who made this report is Raymond A. Hill, who completed a report on Colorado River waters for the State of Colorado in 1953—see Senate Document No. 23, 84th Congress, first session. The San Diego report concludes that the upper Colorado River storage project will have a disastrous effect on the water supply of the densely populated coastal cities of southern California. It states that:

16. When the upper Colorado River storage project is constructed and in operation, there will not be a sufficient flow in the river below Lee Ferry to supply the full right of the metropolitan water district, namely, 1,212,000 acre-feet per annum. It is quite probable that the flow will not take care of more than about one-half of the full right.

17. In order to obtain its full right in the Colorado of 1,212,000 acre-feet per annum, it will be necessary to make other arrangements to replace the deficiency resulting from the construction of the upper Colorado River storage project.

18. Any reduction in the Colorado River aqueduct diversions will mean a proportionate decrease in the amount of water available to the San Diego County Water Authority through the existing aqueduct. Its effect on the authority would be disastrous.

See report, page 20.

How, in the face of this report, to say nothing of the testimony made in good faith by California representatives, can the gentleman from California [Mr. ENGLE] support this project, and still say, as he does, "should authorization of the project prejudice California's legal rights to water of the Colorado River, my duty as well as the duty of every other person charged with the responsibility of representing California in or before Congress would be to oppose the legislation with all possible vigor"?

Farm Legislation

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks I beg to ad-

vise the House that today I presented to the Congress a resolution on pending farm legislation that was sent me by the Associated Farmers of Richland County, Inc., of Mansfield, Ohio. It sets forth their opposition to any form of Federal control or subsidies.

I also have presented to the Congress a resolution on social security by the Associated Farmers of Richland County over the signature of its chairman, John G. Woods.

I respectfully ask the membership of this body to analyze carefully these resolutions.

Secretary Dulles and Foreign Aid

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, like most Americans who have become uneasy of late about the unsteadiness of our leadership in the realm of foreign policy, I read with considerable curiosity the speech delivered February 26 in Philadelphia by the Secretary of State. It is stimulating to have Mr. Dulles with us from time to time to speak for the administration, because the dramatic changes in Communist strategy which have been building up in Moscow for the past year require a thoughtful response from our Government. Mr. Dulles' speech seems to qualify as thoughtful, although it is not always his prepared utterances which make the happiest impact on his public. One looks in vain, however, for new ideas to match the new departures of the Communist high command. We can only hope that this does not signify that Mr. Dulles really believes what he suggested to the Senate Foreign Relations Committee 2 days earlier—that the Russians were only at that very moment revising their whole program because of cumulative failures. Any newspaper reader realizes that the revision of the Communist's approach to the world has been in effect most drastically for many months.

Yet even though the Secretary of State made no really new proposals in his address, I fear that the response of his party followers in Congress will be something new. Ordinarily an administration spokesman can expect the Members of his own party in Congress to applaud and support his recommendations.

This should be particularly true in matters which truly embrace the national interest, as do our relations with the underdeveloped nations of the world. If a Secretary of State, himself, cannot command such allegiance, surely his President should be able to find friendly voices among his own party in Congress to speak up in favor of his recommendations. Yet the one idea in Mr. Dulles' address which evidences any degree of freshness is one that has been met by silence within his own party—a silence made all the more humiliating by the fact that a band of Democratic Members of the House have publicly announced themselves in favor of the proposal.

I refer, Mr. Speaker, to the request made by President Eisenhower in his state of the Union address that he be given authority to commit this country to support a limited number of economic and technical assistance projects for a period of time sufficient to insure their completion. This authority is deemed necessary by the administration to strengthen our policy of positive contributions toward creating a better life among the newly enfranchised peoples of the world whose struggle for democracy is so vitally important to the free nations. Secretary Dulles reiterated this proposal, Sunday. The acceptance of this idea by myself and 16 of my Democratic colleagues was publicly announced on January 22. The President and Mr. Dulles must long for a similar profession of agreement from their own side of the aisle. The idea of advance commitment of aid funds is somewhat new, to be sure, although Congress has certainly indulged in implied commitments in undertaking previous large-scale aid programs even on a yearly appropriations basis. Yet, at a time that cries out for original responses to the changing situation which confronts us, it must be disheartening to the Secretary to find Members outside his own party taking the lead in seconding this modest new suggestion, while his own party colleagues remain eloquently silent.

As a signer of the letter of the 17 House Democrats on January 22, I am happy to renew my support of the Eisenhower-Dulles proposal for limited authority to commit this country to aid important foreign development projects until their completion. It is regretable, we feel, that Members of the President's own party have not given him and his sometimes harassed Secretary of State a similar expression of approval.

Edward H. Butler, Outstanding Editor and Citizen

EXTENSION OF REMARKS
OF
HON. EDMUND P. RADWAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. RADWAN. Mr. Speaker, I want to join with all Buffalo in paying tribute to the late Edward H. Butler, editor and publisher of the Buffalo Evening News. While his death caused his physical departure from our midst, his memory and spirit shall long be a part of us in the great western New York area. Such was his contribution to his country and community.

I submit just and deserving remarks from his neighbor, the Buffalo Courier-Express:

E. H. BUTLER, OUTSTANDING EDITOR, CITIZEN

His community, his country, and the newspaper profession all could be justly proud of Edward H. Butler. He was a philanthropic and civic-minded citizen, a stanch patriot, and an outstanding editor and publisher.

In his long and distinguished career Mr. Butler played an important part in the historic transition of the American newspaper from a one-man organ of opinion to something approaching a public institution. The son of a noted "personal journalist" of the old school, he became an admirable exemplar of the new era—a newspaper owner who regarded his property as a sacred trust to be administered in the public interest.

His professional duties did not monopolize Mr. Butler's talents and time. He was a generous contributor to philanthropic causes and a remarkably active patron of education. Both the University of Buffalo and the Buffalo State Teachers College owe much in the way of development and progress in his interest and support.

It is not only for his faithful public service in these fields, however, that Mr. Butler will be remembered. He was a man of the highest principle, of strict and sensitive conscience, and of deep religious conviction. And he was a gentleman in the true and full sense of that fine old word.

The Courier-Express extends its heartfelt sympathy to Mr. Butler's family and to the Buffalo Evening News; and we mourn the loss of a man who deservedly held the respect and affection of countless friends and colleagues not only in Buffalo but throughout the Nation.

Rabaut Receives Highest DAR Award

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mrs. GRIFFITHS. Mr. Speaker, under leave to extend my remarks, I would like to call attention to the honor bestowed by the Daughters of the American Revolution upon my colleague and fellow Michigander, Congressman LOUIS C. RABAUT. The Daughters presented Mr. RABAUT with their highest tribute—the award of merit—for his efforts in having the words "under God" inserted in the pledge of allegiance to the flag. This ceremony was most fitting, as Mr. RABAUT has worked long and hard to remind the American people that all we are or ever will be is a direct result of divine protection.

I am happy to append the presentation speech of Mrs. T. O. Timberlake, regent of the Continental Dames, District of Columbia DAR, and the acceptance statement of Congressman RABAUT:

ADDRESS BY MRS. T. O. TIMBERLAKE, REGENT, CONTINENTAL DAMES CHAPTER, DISTRICT OF COLUMBIA DAR

This great Nation was born of an intense and burning desire for freedom—to live, to work, and to worship God. The ancestors of the Daughters of the American Revolution sacrificed their all for these ideals. They fought with every tangible odd against them, except their burning zeal and their supreme faith in God. Everything they did was done in faith and the knowledge that God was with them. In every deliberation and every meeting or battle—in their homes—they asked God's blessing and His guidance. They suffered hardship and privation, they fought and died in the bitter cold and snow with

prayers on their lips and they sat down to write the greatest documents ever written, the Constitution and the Bill of Rights, only after invoking God's blessing and guidance. And America grew and prospered.

Somehow, we seem to have forgotten God—we have forgotten that He is still and will always be, our only hope and refuge and that it is we who have separated ourselves from Him, and not He from us.

You, Congressman RABAUT, have done a beautiful and a far-reaching service to your country and to the American people by introducing and engineering the passage of a bill in Congress to insert the words "under God" in the Pledge of Allegiance to the Flag—thereby bringing constantly to our thoughts the fact that this Nation is under God.

The Daughters of the American Revolution strive constantly to preserve the American way of life—to keep ever sacred the ideals of our Founding Fathers, and because what you have done is so definitely consistent with our purposes, Continental Dames Chapter of the District of Columbia, DAR, has empowered me, their regent, to present to you the Daughters of the American Revolution Award of Merit for 1956—the highest honor within our power to bestow.

ADDRESS BY CONGRESSMAN LOUIS C. RABAUT

It is a great pleasure to have an endeavor of mine honored by such a distinguished group as the Daughters of the American Revolution. Your organization long ago became synonymous with patriotism, devotion to duty, and moral strength.

I want to thank especially Mrs. Timberlake and the Continental Dames Chapter for the kind invitation to come here today and receive your coveted award of merit.

Perhaps you have wondered what set of circumstances combined to bring about this historic change in the wording of the pledge of allegiance to the flag.

I certainly would never infer that I was the first to strive for a recognition of the Almighty in our national affairs. On the contrary, many organizations and individuals have sought to accomplish this worthy end. The Knights of Columbus and the American Legion had unofficially incorporated the meaningful words in their pledge recitation prior to my bill. The first suggestion for appropriate legislation came to me from a private citizen, a Mr. Mahoney of Brooklyn. Also, the Reverend Doctor George M. Docherty, pastor of the New York Avenue Presbyterian Church, Washington, in a sermon with the President in attendance, spoke on the subject of Lincoln's Gettysburg Address and urged that the phrase "under God" be added to the pledge of allegiance. I am happy and proud that I was able to be the instrument of change.

In addition to my Under God bill, I introduced a bill to authorize the Postmaster General to provide a mail cancellation die bearing the words, "In God We Trust."

When the 3-cent and 8-cent stamps were issued bearing this motto, I did not press for further action on my bill, but later introduced a bill of similar importance, using instead the words "Pray for peace." This bill, H. R. 692, was passed in the House last year and it is now in the Senate Committee on Post Office and Civil Service. I would appreciate your contacting member friends throughout this country and urge them to write their Senators in support of my action. I feel that mail going throughout this country and the world bearing the words, "Pray for peace," cannot help but turn men's minds toward the only One who can really give us the peace so urgently sought in these troubled times.

How proper it is that we, as the first of the sister nations of the earth, proclaim to the whole world, as did our Founding Fathers, our praise and dependence upon Almighty God.

In closing, I would like to thank you again for inviting me here today. You are a most gracious group of ladies. I will always remember this day and cherish this high honor you have bestowed upon me.

Reds Gear Schools To Win Cold War

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1956

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a column appearing in the Washington Post, Tuesday, February 28, 1956, entitled "Reds Gear Schools To Win Cold War" by Marquis Childs.

The article follows:

REDS GEAR SCHOOLS TO WIN COLD WAR

(By Marquis Childs)

A report based on firsthand observation adds another note of warning that education in the Soviet Union is far outstripping education in the United States.

The massive educational program still expanding in Russia, under which today nearly twice as many students are enrolled above the high-school level as in this country, is one reason for the extraordinary confidence expressed by Soviet leaders at the recent 20th Congress of the Communist Party.

For as the latest warning, from former Senator William Benton, of Connecticut, makes clear, the Soviet educational system is geared to win the cold war.

Benton, who made an intensive study of Soviet education and propaganda last year, says that system is producing a surplus of engineers and technicians who will be assigned to carry out technical assistance in every uncommitted country of the world. While getting their scientific training, they are thoroughly indoctrinated in the Marxist-Lenin line.

There are schools—and this seems to have escaped the attention of even specialists whose business is to know what is going on in Russia—in which all the training from the first grade on is in English, French, or German. Graduates of these schools have a fluent working knowledge of the language they will need when they are sent abroad to do a technical—and propaganda—job.

With a Russian-speaking interpreter and assistant, Benton took a tour of Soviet Russia's universities, technical institutions, laboratories, and libraries. In a 30,000-word article for the Britannica Yearbook, of which he is publisher, Benton writes:

"The Soviets are now challenging us frontally at what have historically been two of our strongest points, technology, and mass education. The present rate of Russian educational advance is faster than our own, just as their growth rate in industrial production surpasses ours. The gap in total performance is closing. It is closing rapidly.

"In less than 30 years the Soviets have created a primary school system rivaling our own in universality, with nearly 100 percent enrollment. Their secondary school system is mushrooming amazingly; by 1960 every Russian youngster is to be given an education at least comparable to a better high school diploma.

"They have already surpassed us in both the number and percentage of students enrolled in institutions above the secondary level—with 4,300,000—to our 2,700,000."

In two speeches late last year, Adm. Lewis L. Strauss, Chairman of the Atomic Energy Commission, sounded an equally grave alarm. He said it was evident the United States was rapidly falling behind Soviet Russia in the training of scientists and technicians with the "certainty that we are turning out less than one-half the number of scientists and engineers we require—an alarming statistic by itself."

The deficiency begins, according to Strauss, in the high schools, where science training has long been inadequate and standards of science teaching dropping rapidly. He cited the fact more than half of all American high schools fail to teach physics or chemistry.

In contrast, Benton points out that in the last years of secondary school Soviet students must take 4 years of mathematics, including algebra, geometry, and trigonometry.

The objective, it is hardly necessary to add, is a Communist education—that is, first-rate technical training buttressed by complete indoctrination in Communist dogma. It is the combination of indoctrinated zeal with technical proficiency that is so ominous for the West.

In a recent speech Benton proposed the creation of technical-assistance academies similar to West Point and Annapolis, where young men of superior intelligence would be trained as engineers and technicians in every field.

The academies would be attached to and under the supervision of such outstanding institutions as the Massachusetts Institute of Technology and California Tech. In return for their free education, young men would agree to sign up for a certain number of years of service in America's technical-assistance program overseas.

Short of some positive, constructive step such as this, the drift will continue. And if estimates of Soviet progress are even approximately right, the gap will widen and America will fall increasingly behind.

To permit this to happen is hardly less than an admission of defeat. For if we have learned nothing else in the atomic-electronic age, it is that the engineers and scientists of today win the battles of tomorrow.

World Tension Increases as Reds Cast Wishful Eye Toward Palestine

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1956

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to call the attention of my colleagues to an article which appeared in the Clay County Free Press, February 2, 1956, by Mr. Ellis Friend, of Ivydale, W. Va., under the caption "World Tension Increases As Reds Cast Wishful Eye Toward Palestine."

The article follows:

WORLD TENSION INCREASES AS REDS CAST WISHFUL EYE TOWARD PALESTINE

(By Ellis Friend)

For many years Russia has been casting a wishful eye toward Palestine and the middle East, waiting for the time to come that she could begin her propaganda campaign toward Palestine, as she had done in many other instances.

Now Russia is sending arms and ammunition to the Arabian countries as well as other

Middle East countries. She is also trying to make trouble between Israel and the Arabian countries, also Jordan and all other middle eastern countries.

Since Israel has been an independent country for 8 or 9 years, I believe there has been skirmishes between Israel and her avowed enemy, the Arabian countries. Now Russia is trying to get all the other members of the United Nations to condemn Israel for one little armed skirmish in which the Arabs were to some extent the loser.

The United States and England have joined in condemning them, but Russia wants them to go ahead and exclude Israel from the United Nations. There is where we would make our biggest mistake in so doing. The heads of our Government claim that they do not want to start an arms race which no one wants, but we are already in one and there is no way on earth to get out of it.

Russia is taking the lead and the longer we refuse to send arms and ammunition to Israel, the farther we will drive them toward the Communist countries. We should know they are going to get arms and ammunition from somewhere and if we refuse to help them, the Communist countries will, and sooner than we thing, they may turn Communist, if they see that they are not going to get any help from the free countries.

War clouds are flying thick and fast around the Middle East and especially around the old, partly rebuilt city of Jerusalem. There is a major war shaping up in the Middle East, and let us hope and pray that it starts there instead of an atomic or hydrogen war against the United States by Russia. In the latter case here is what could happen:

Now that we know Russia is in possession of both the atomic and hydrogen bomb, this fact has added much worry to the already worried minds of the people of the United States. Now the big question is in everyone's mind, not only in the United States but in most of, if not every nation on earth, is when will these dreadful bombs be used and who will be the first to start using them.

We are no longer in doubt as to whether or not Russia has these dreadful weapons of war, as a good many of our Congressmen have already conceded that they have, and just to leave no doubt about this matter, the President of the United States has told us in no uncertain terms that Russia has hydrogen as well as the atomic bombs.

Now the question is being asked everywhere on street corners, in offices and stores and almost every place where people congregate, "Will Russia attack the United States with the dreaded bombs, and if so, just when?" It is known and is no secret that we have large and powerful bombers, capable of carrying bomb loads to any part of Russia and return. It is also believed that Russia now has bombers that could reach any point in the United States and return. It has been estimated by people who are in position to know that if the Reds should attack with 100 bombers, no less than 70 of them would reach our shores. They would, on their first raid destroy no less than 45 to 50 million lives, and possibly 60 to 75 million lives, which would be many more times the lives than have been lost in all the wars that the United States has ever been engaged in since this country was discovered.

Then what about the raid the following day, the next night, the next day and the next night and right on and on. This is something for us to all think seriously about. People are not giving this matter nearly enough thought and consideration and especially, this would apply to the heads of our Government.

If attacked, our airmen would take the air with great and powerful bombers and head straight for enemy countries in an effort to do as much or more damage than our enemy inflicted on us, provided, however, the enemy had not entirely destroyed our seat of Government.

There is a good chance that an all-out atomic war would not last more than 2 or 3 weeks at the most. Civilization would soon be wiped from the face of the earth. Let us hope and pray that it will never happen.

This reminds me of a story I once heard. A man was passing through the country when suddenly he came upon two large snakes which had met and were trying to swallow each other. The man looked upon the scene for a while. The snakes kept right on swallowing and swallowing, so the man passed on but soon became curious and returned to the scene to see just what had happened to the two snakes. As the story goes, the snakes just swallowed each other up so there were just no snakes left.

Let us hope and pray and do everything possible to keep this from happening to us. As we know, some of, or should we say, a great many of our top secrets regarding the atomic and hydrogen bombs have been allowed to slip through our hands and reach the Russians. This has come about no doubt by Communists and Communist sympathizers being allowed to slip into important places in our Government. Had this been prohibited in time, the Russians would still be without the atomic and hydrogen bomb secrets.

After all has been said and done, we must still realize that our very civilization and existence here on this earth are at stake, and are hanging in the balances. Our only real hope is for all of us in this country to turn to the Lord and invoke His divine power and guidance. This would especially apply to all the people at the head of our Government.

Let us all pray for peace and a better understanding among the peoples of the world.

It Makes Double Taxation

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. O'HARA of Minnesota. Mr. Speaker, my attention has been called to a thoughtful editorial in the Cottonwood County Citizen, Windom, Minn., January 25, 1956, on the subject of Federal aid for schools.

The editorial follows:

IT MAKES DOUBLE TAXATION

Thus far no advocate of Federal aid for schools has come forth to explain just why those communities that have already taxed themselves to the limit to provide adequate schools should turn around and submit to being taxed to provide schools for some other district whose taxpayers have steadily refused to take care of their problem as we have.

Just for example, Windom not long ago spent over a million dollars in school construction and, as a result, local property owners have a heavy burden to bear for many years to come. They assumed that burden willingly because they recognized it as a responsibility of their own.

Now we would like to ask our two Senators to advise us as to whether the bill they favor will include help for us with our 1 million dollar burden, or will it just mean that the help will go only to those who, unlike us, have refused to assume their responsibility, even though they were as able as we.

Areas that will come in for greatest aid have found it possible to afford many things that we have thought we could not afford. We put the needs of our chidren first. They put other things first, in many cases. Are we to be penalized?

A Bard Speaks Up for Alaska

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I desire to include an editorial which was reprinted in the Fairbanks (Alaska) Daily News-Miner, on January 28, 1956, following its publication in the Cleveland (Ohio) Plain-Dealer. The editorial, entitled "A Bard Speaks Up for Alaska," follows:

A BARD SPEAKS UP FOR ALASKA

The new Congress, according to Arthur Edson of the Associated Press, is in a poetical mood. At least some of the Members are, although it's difficult to understand what can cause the tender emotion at this raw season of the year. Perhaps it's the subject, calling to mind warmth and sunshine and leisurely and attractive living and breath-taking beauty, in short, Hawaii.

Congressman JOHN V. BEAMER, Republican of Indiana, was responsible for inserting the first poem of the year in the CONGRESSIONAL RECORD of January 5, 1956. 'Twas composed by one of his constituents, a lady who had visited Hawaii, and who, in 18 stanzas, sang the praises of the incomparable island, concluding:

"Let's use consideration!
Let's end the lengthy debate!
Extend heart and hand to Hawaii,
And make her our 49th State!"

Now we know the power of Hawaii over mortal men, one of our associates suffers violently from Hawaiilitis, a disease he contracted on a visit to the heavenly island several years ago. When the wind is howling and the snow is swirling it is downright pitiful to see him staring into space with a pathetc royal palm look in his eyes!

With all respect for Hawaii (we hope we get there some day) is it fair to stack the deck in her favor while poor, half-frozen Alaska is also pounding on the door for admission? Why not admit them both, letting them toss a coin to see which shall be the 49th and 50th State?

But what is needed immediately is a bard for Alaska who could jump into the CONGRESSIONAL RECORD with something like this:

Let us sing of the polar bear
And the sturdy Eskimo,
And thick red-flannel underwear
From Fairbanks to Juneau!
Where the snow's stacked high 'neath the Arctic sky,
And the radar net equates,
So an evening's sleep is calm and deep
In the present 48 States!

O, it's bleak enough, and cruel and tough,
And here no trade winds blow,
We might be rough but we have the stuff
As the Nation well should know.
When legislators pass us up—
Regretfully decline—
It makes us sore as a thawing pup—
We should be 49!

Will We Trade Freedom for Security?

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, the question of security and freedom is highly controversial today. It has been said that if we want security, we can find it in any jail house. This, however, is not the kind of security our people want nor is it what the free peoples of the world want. It appears, however, that in some parts of the world in those countries which have been plagued by war, political unrest, and economic disparity that they will accept security at the price of freedom.

As part of my remarks I am including a timely editorial by Mr. Constantine Brown which appeared in the Evening Star of February 22:

SECURITY AT PRICE OF FREEDOM—SOME IN WESTERN EUROPE WOULD PREFER SOVIETS' SLOW-SUFFOCATION FORMULA

Reports from Western Europe show that our allies were impressed by Comrade Khrushchev's frank 7-hour talk before the Moscow Communist rally. Except for the lack of operatic trappings it was not much different from Hitler's Nazi Party meetings at Nuremberg.

In the existing confusion, Khrushchev's blueprint for the world undoubtedly appeals to Europeans who live in the shadow of the Soviet might and are increasingly reluctant to offer militant resistance to communism.

The Kremlin spokesman gave little choice to his adversaries. He told them to choose between coexistence with the Communists or war. And the west Europeans who for years have lived in fear of another war seem to prefer slow suffocation to brutal strangulation.

Khrushchev spoke of the "various forms of transfer to socialism" and emphasized that this transfer could be achieved through parliamentary channels without civil wars. This pronouncement has already affected political thinking beyond the neutralist countries.

The Soviet leader's utterances have been particularly effective in France. The country is beseiged with serious domestic political troubles and even greater problems in North Africa. The administration of Premier Guy Mollet seems as much paralyzed as its predecessors. M. Mollet cannot legislate reforms because he does not have an actual working majority in the National Assembly. The balance of power is held by the Communists and Poujadists, who though at opposite polls politically, would join forces to overthrow the mdidle of the road government.

The Khrushchev pronouncement that a transfer to "socialism (in Soviet language it means communism) through parliamentary channels" has had an unquestionable appeal to the splinter parties which have hitherto supporter M. Mollet. The transition is, in the minds of the French as well as the Italians, very simple: Organize a popular-front government including representatives of the Communist parties, and then let nature take its course.

Had it not been for our intervention in Europe in 1947 when a popular-front coalition government existed in France and Italy, these two countries might already have Communist regimes in office. Our lavish expenditures for postwar economic reconstruction was predicated on expelling the Communists from the government and prevented our present allies from going the Moscow way. Conditions are no longer the same, however. The economies of these countries have been restored above the prewar capacity. Moreover, the USSR is now in the hands of a man who claims no longer to be sole dictator but a mere member of a directorship.

Stalin inspired fear not only among the peoples behind the Iron Curtain but throughout Europe. He acted too much like Hitler. Khrushchev plays the part of a well-meaning, happy-go-lucky, heavy-drinking, common man who wants everybody to be happy. His ultimate goals are no different from Stalin's but his methods are more palatable to the crowds. Stalin was anxious to rush things. Khrushchev who has set a new pace—at least for his intended victims in Europe—says that he can wait until communism is established by what he describes as "parliamentary channels."

Khrushchev remembers that Hitler achieved considerable success, until he plunged his country into war, by getting behind him the working masses and the moneyed classes and by eliminating the intellectual and middle classes. This recipe might now be adapted to the Western democracies where many intellectuals are already imbued by the Communist ideology while the middle classes seem helpless.

The full international significance of the 20th Communist rally will become more clear in the months to come. Our European friends who seem to be abandoning ship will wait to see what will happen to this country next November. They will wait to see the trends in the United States and will watch the extent of our reaction to the likely Red provocations in the Middle East and particularly the Far East. The Communist ideology has not an ideological appeal but one of obvious strength on the intended victims of Comrade Khrushchev.

Secretary of State Dulles spoke once of massive retaliation to Communist aggressiveness. He has been beaten over the head for his temerity ever since, both at home and in the NATO countries. When Khrushchev, at the opening of the Soviet Congress meeting, gave us no other alternative but coexistence or war, no such loud criticism was heard in America. In Europe his words were described not only by the Communist press as statesmanlike.

Coupled with this are the public admissions in America that we lag sadly behind the U. S. S. R. in a number of nonconventional weapons. Our allies, who throughout history have become accustomed to respect the parading of physical strength, look now toward the East. It is thence, they feel, that they can buy security at the price of freedom.

Visitors From Italy

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include herein an editorial which appeared in the February 28, 1956, issue of the Washington Post and Times Herald entitled "Visitors From Italy":

VISITORS FROM ITALY

President Giovanni Gronchi and Foreign Minister Gaetano Martino of Italy are welcome guests this week in Washington. They are welcome first of all as representatives of an important nation of friendly people to whom Americans owe a continuing debt. This debt is found in the cultural heritage, the music and art, the millions of good citizens Italy has furnished to this country. President Gronchi and Dr. Martino also are welcome for reasons of state. That Italy succeed in her economic struggle to raise the standard of living and spread the benefits to low-income groups is of vital importance to the Western World. President Gronchi's feeling that the Christian Democratic coalition of Prime Minister Segni must move to the left and sponsor more comprehensive reforms if it is to win continued support is a feeling that has much sympathy among observers of the Italian scene. President Gronchi will have an opportunity to explain this in detail and to place in perspective his thoughts about the possibility of wooing the Nenni Socialists away from the Communists. He and Dr. Martino also will have a chance to discuss their views about the weaknesses in NATO and about Italy's new relationship in the United Nations. For their part the American representatives will have a chance to size up the new role of the Italian President as Signor Gronchi exemplifies it. Amicable discussion should be useful all the way around.

Statement by Dr. Wolfgang A. O. Pohle

EXTENSION OF REMARKS
OF
HON. MARGUERITE STITT CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include a statement made recently in Chicago by a special guest of our State Department, Dr. Wolfgang A. O. Pohle. Dr. Pohle is a member of the Economic Policy Committee of the German Parliament and also a member of the Joint European Committee for Coal and Steel. His statement, as printed in the Chicago newspapers, holds interest for all of us:

Chicago is truly the steel capital of the world. We in the new postwar Germany who are endeavoring to fulfill our role in rebuilding the economy of the free world have much to learn and to admire here. American preeminence in heavy industry has aided us not only in building our own industrial progress but also, since we border directly on the Communist Empire, it has served to fortify our will to resist Soviet political and economic pressures with the knowledge that we have in the United States an ally strong both in the democratic spirit and the sinews of democracy as well.

To further strengthen these bonds and to provide a potent weapon against the encroachments of communism, a Magna Carta of the free nations of the world should be formulated. As proposed by Mr. Hermann Abs, president of Germany's largest bank and a leading statesman of his country, this Magna Carta would guarantee property owners of the world their inalienable right of possession and eliminate unwarranted and illegal confiscation or expropriation.

Action in this direction is urgent, as demonstrated by recent Soviet moves in the Middle East, where they offer war equipment linked with Russian capital investments.

Chicago, as the capital city of America's Midwest heartland, is a symbol of what a free people living in a free economy can accomplish.

In my country, under the leadership of Chancellor Konrad Adenauer, I am proud to say that the German people themselves feel a unity with the West based on a mutual adherence to the principles of free government, a free economy based upon individual initiative and the sanctity of private property, and opposition to the further extension of Communist imperialism. Facing the muzzles of Soviet guns as we do, the importunings of the Communist state are recognized by us for what they are. If the Soviets truly desire to live in peace in the world, it is their deeds and not their words which should convince the free world of their sincerity.

Statehood and the Alaska Constitution

EXTENSION OF REMARKS
OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1956

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks I should like to include here the closing address at the Alaska constitutional convention which met for 75 days at the University of Alaska to write a constitution for the future State of Alaska. That address was delivered on the day the constitution was signed, February 5, 1956, and was given by William A. Egan, of Valdez, who served so ably and so faithfully as the convention's president:

Governor Heintzleman, other distinguished guests, fellow Alaskans and delegates, in prefacing my remarks this afternoon, it would seem fitting and proper that the preamble to Alaska's State constitution be presented to all Alaskans. Ladies and gentlemen, the preamble:

"We the people of Alaska, grateful to God and to those who founded our Nation and pioneered this great land, in order to secure and transmit to succeeding generations our heritage of political, civil, and religious liberty within the Union of States, do ordain and establish this constitution for the State of Alaska."

There are those in Alaska who still say, "What great difference does it make that I, an American citizen, cannot cast my vote for the President and Vice President of the United States?

"What great difference does it make that we are represented by one, voteless Delegate in Congress—a Delegate who cannot vote even in committee, on any subject even though that subject might relate solely to the detriment or welfare of our great Territory. What great difference does it make that acts of our Territorial Legislature are governed mainly by 2 acts of Congress—1 dated July 30, 1886, and the other dated August 24, 1912?"

Well, to me, an I know to most of you, it makes a great deal of difference. We want to cast our ballot for our choice for President of the United States every 4 years. We want to cast our ballot at regular intervals for 2 United States Senators and for a voting Representative in the United States Congress from the great State of Alaska, in order that we have our proper representation as to the welfare of our Nation; and that in order that the tremendous natural resources available to our Nation in Alaska can be properly unfolded and utilized. Then, too, we want to vote for representatives to a State government that is not thwarted by a combination of 2 laws—one of which was enacted specifically for the Territory almost 70 years ago and the other one which was enacted by the Federal Congress almost 44 years ago.

Alaska's fight for the fullest measure of self-government did not have its inception in the time of most of us who are here this afternoon. Alaska was purchased by the United States from Russia on October 18, 1867, at a cost of less than 2 cents an acre. Alaska has served more than 88 years under the yoke of Federal domination. We are now in our 43d year of having been an organized Territory. No other State in the Union had to endure even half this period of time under Territorial status before admittance to the Union. During these years, despite Federal obstacles placed in the way of development of its natural resources, Alaska has produced more than 400 times the value of the original $7½ million purchase price from these natural resources.

In 1898, the Congress of the United States enacted legislation making it possible to file on a homestead in Alaska—but only on surveyed lands and there were no surveyed lands in Alaska in those days. This act set the people of Alaska afire with indignation and the cry for some sort of representation rose to one of cresendo proportions. Mass meetings were held in various populated areas of the Territory. Eastern papers picked up the story and Alaska's cause received some attention in Congress. In 1906, after 25 years of petition, Alaska was permitted to elect a voteless delegate to the national Congress. Persistent citizens kept hammering away and on August 24, 1912, the Congress granted incorporated Territorial status to Alaska, with the right to have its own legislative assembly, subject to the restrictions contained in the Acts of Congress of 1886 and 1912. The first Territorial legislature convened at the capital city of Juneau in 1913.

Ever since that time, Alaskans who were intimately familiar with the intensive handicaps placed upon industrial development of the Territory by antiquated Federal bureaucratic redtape, have continued the battle for a fuller measure of self-government with statehood as the ultimate goal. For more than a decade, dedicated Alaskans have carried a direct fight for the inherent right of our citizens to full citizenship as set forth in the Constitution of the United States. In 1946, at a referendum election, Alaskans voted by a majority of 3 to 2 for statehood for our great Territory. In these past few years, increasing numbers of Alaskans who had been lukewarm toward statehood, or who had been noncommittal, have joined forces in this greatest of common causes. Today, many opponents of statehood admit privately that another referendum on the question would reveal that a majority of from 4 to 1 to 6 to 1 now favor immediate statehood for Alaska.

The arguments against admission of Alaska into the Union are identical with those that were advanced against the admission of nearly all the 29 States that were territories prior to their admission into the Union. Alaska has more population than one-third of the States of the Union had at the time of their admission. There are those who will say that our population is relatively smaller in proportion to the total population of the United States than that of those earlier States at the time when they were admitted. The fact is that there were at least five States which had not only less population than Alaska has now, but even less population in relation to the national total.

Distance from the National Capital and noncontiguity to the mainland are often advanced in the course of congressional debate as reasons why Alaska should not become a State. Measured in the only true perspective, that of time required to journey between the proposed State and the National Capital, Alaska is much nearer Washington today than were most all the States at the time of their admission to the Union. Today one flies from Fairbanks to Washington, D. C., in approximately 20 hours, and even less time, depending on the type of aircraft one secures passage on. Instantaneous communication by telephone adds a factor not in existence when previous States were admitted. All of our principal cities are linked with the national telephone system.

To say that Alaska lacks the resources to support a State is fantastic. Many of the States now in the Union would be happy indeed, if they could be endowed with Alaska's natural resources. Even though our resources are in their present state of underdevelopment—mainly because of the Federal territorial-status yoke, our economy is amply able to support statehood. A prime example of Federal bungling in the handling of our great resources is our commercial fishery. It is my very firm conviction that, in the immediate years following the advent of statehood to Alaska, our fisheries conservation problem will be solved. With local control of our fisheries, the annual pack of salmon taken from territorial waters will quickly take an upturn because conservation policies would then be laid down by Alaskans intimately familiar with the problem. In a few years' time, with no additional increase in tax on the industry, our State treasury would be additionally benefitted with several millions of dollars each biennium. It is quite likely that with the rebuilding of our fisheries, which have become so depleted under the yoke of Federal stewardship, this increase in revenue to the State treasury could be accomplished and allow for a reasonable decrease in the tax now levied on the industry by the Territory. This question would take a considerable length of time for explanation, but it is one of such extreme importance when we are discussing the subject of statehood for Alaska that I do not believe any argument relative to the question could have much merit if it were not brought home to all our citizens that the solving of the problem of perpetuation of our great fisheries resource can only be accomplished with the right to fully govern ourselves. There are those who say that statehood would "open the door to the poorhouse." They cite such matters as the recent Mental Health Act, which carried a direct appropriation for construction of facilities by the Federal Government. To me, these people have missed the point altogether. The compelling reason for insisting upon the direct appropriation is just another example why we need statehood so desperately. The Federal Government has withheld care of our mentally ill from Alaska over the years. With no appreciable drain on its treasury, the Territory could have provided the facilities from the beginning, together with the sympathetic, expert care which means so much to the ultimate recovery of these patients. Other United States Territories cared for their mentally ill from the inception of Territorial status and were thus enabled to gradually build up their facilities.

To those who say, "This is not 1900—this is 1956," we repeat that no great industrial expansion came to any of our other 29 Territories until after their admittance to the Union of the United States. To this end, there is no difference between 1900 and 1956.

To those who say, "No one is holding us forcibly in Territorial status—we can move out if we choose," we say, "No, no one is forcibly holding us here. But, we have built our homes here; we are rearing our children here; a great many of us will die here. We never intend to live anywhere else. We love our great United States of America,

and our hearts belong too, to our great Territory of Alaska and we will never have a true peace of mind until we are taken in full membership as one of the great States of the Union."

In affixing our signatures to this document we did so with the knowledge that each word had been subject to free and lengthy debate in committee and on the floor of this constitutional convention.

I say to each and every Alaskan: If it had been your good fortune, as it has been mine, to have witnessed the abilities, the diligence, the devotion to duty, of these delegates who have drafted the proposed constitution for the State of Alaska in carrying out the task that had been cut out for them, you would say of their labors, "Well done."

We have just completed the task for which we were sent here. Your delegates to Alaska's Constitutional Convention have now given to you, the people of Alaska, the proposed constitution for the State of Alaska. We know that you will judge with great care the end result that has been accomplished here. We are exceedingly gratified that none other than the President of the United States, the Honorable Dwight D. Eisenhower, indicated in his message received here yesterday, that the eyes of the Congress of the United States and the eyes of the people of the United States will be upon you on Ratification Day, April 24, 1956.

Protecting the Consumer

EXTENSION OF REMARKS

OF

HON. CLIFTON (CLIFF) YOUNG

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1956

Mr. YOUNG. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include a talk given by Mr. Otto Herres, vice president, Combined Metals Reduction Co., at the annual meeting of the Colorado Mining Association in Denver, Colo., February 3, 1956.

Mr. Herres is an outstanding leader in the mining field and few people in this country have a better grasp of the problems facing the mining industry. His remarks merit the careful consideration of all Members of Congress:

PROTECTING THE CONSUMER

(By Otto Herres)

RECORDBREAKING PRODUCTION

In the year 1955 of otherwise booming prosperity, output of lead and zinc from the mines of the United States again, as was the case in 1954, remained at the lowest level since the years 1931–34 of the great depression. But this low state of mining was not caused by any falling off in use of the metals. Slab zinc production and consumption reached alltime peaks. Lead consumption was at a very high level. Demand for both lead and zinc was strong and supplies were tight. But in strange contrast to the record production and mounting sales, output of lead-zinc ores from the Nation's mines gained but little from the surging industrial activity.

The Government in reporting the mineral production of the United States for 1955 pointed out that the production level of the mines was far below average.

"Domestic mine output of lead and zinc topped 1954, but the production level remained well below the average of any of the past 4 decades for zinc and 5 for lead."

Below-average output

Mine output of lead was approximately 40,000 tons below the average of the last 10 years. Zinc mine output was some 84,000 tons below the 10-year average. And obviously the averages were pulled down measurably by the low tonnages of the last 2 years. But for all that, slab zinc production and use increased 20 percent during 1955 to set new records and consumption of lead was close to an alltime high.

In September the price of zinc moved up to 13 cents per pound to regain the price level of January 2, 1953. But during the 3-year cycle, marked by depression and rising costs for the mines, the price of zinc dropped to a low of 9¼ cents in February 1954, and lead to 12 cents per pound in April 1953, far below the cost of production at present-day wage scales.

The 1953–54 period of 9¼- to 11-cent zinc prices served to eliminate mine production of some 150,000 to 200,000 tons of zinc. Mine output dropped from 666,000 tons in 1952 to an estimated 508,000 tons in 1955. The new records for production and use of zinc in 1955 brought no corresponding improvement to the mines. They represent no gain for the mines but rather reflect near-record imports of foreign ores and metals amounting to 610,000 tons in 1954 and some 660,000 tons or more in 1955.

Liquidation of resources

And thus the contribution of United States miners to the cause of foreign aid and freer trade during the past few years has accomplished the liquidation of more than 150,000 tons a year of our zinc production. Communities dependent upon that production for support likewise have contributed their share in the injuries they have sustained.

And so, through this process of wiping out mines by means of imports priced below the cost of production in this country of high wages and living standards, the price of zinc once more has been returned to a level of 13½ cents. Measures toward price stabilization proposed 3 years ago by the mining industry would have avoided the closing of many mines whose production might have helped to supply the metal shortages of present and future years. But opposition by the State Department in the interest of foreign production blocked proposals designed to protect the domestic mines and permit their survival.

Higher prices

United States miners cannot become overly encouraged by the recent price rises in lead and zinc. It will be recognized that prices were raised to attract larger imports of foreign ores and not to aid the domestic mines. The announcement of the price advance in zinc said:

"The rise in the London price of zinc has been encouraging shipments to Europe by domestic smelters of foreign zinc ore and has discouraged imports of refined zinc.

"In order to preserve zinc supplies for our domestic customers we have increased the zinc price by a half cent to 13½ cents a pound."

It would appear from this that we have reached the stage where it is necessary to raise the price of lead and zinc in order to protect the American consumer. He now has to be protected from foreign competition for supplies by price increases, it seems, because sources of supply in his own land have been lost for want of the reasonable consideration that would have permitted their survival. Copper prices on the London Metal Exchange have reached 50 cents per pound in recent months, and during 1951 and 1952 when mining costs were much lower than they are today and United States prices were controlled, the official United Kingdom price for zinc was 23¾ cents per pound. Prices elsewhere in the world reached 32 cents and higher. Is it better to pay high foreign prices in order to obtain supplies when the need is great rather than have assurance of a reasonable degree of self-sufficiency in productive capacity at home?

As for the domestic mining industry, if there is no profit to be gained for the effort expended, there will be no production. Miners will move to other fields. Utah, for example, is one of the leading lead-zinc producing States. But already in 3 years' time there are more miners working at the uranium mines in Utah than in all of the lead, zinc, gold, and silver mines in the State put together.

Requirements for metals and minerals are mounting because of rapidly increasing world population, widespread mechanization of industry, vast expansion of transportation facilities and means of communication, and extensive development of power resources. Consider the strong demand and short supply which prevails for metals in common use, particularly steel, aluminum, nickel, copper, lead, and zinc. The problem in time threatens to be competition for supplies rather than overabundance of metals.

Policies of dependence

However that may be, national policies are encouraging a trend toward dependence on other countries for our metals and minerals. To be sure the lead-zinc mines have been helped temporarily by Government stockpile purchases of lead and zinc. But this offers no long-range assurance of a healthy domestic mining industry. During the time that it is effective, the Government purchasing can be expected to bring added imports to the extent that it serves to increase prices to a more adequate level. Witness the rise in zinc imports last year and recent efforts to attract more foreign ores by higher prices. And when stockpiling ends is the temporary prop by means of which Washington sustains us to be made into a more permanent crutch for a crippled industry? Is that the only plan we may hope for to cushion the reaction which normally may be expected when the current booming activity runs down and heavy demands for lead and zinc subside?

The United States holds whatever leadership it has in the world today because of its great wealth and productive capacity. But when the wealth is dissipated there will be no followers. Nor will the consumer prosper greatly if the productive capacity is impaired, particularly in case that impairment is caused by inflationary cost increases that far outrun corresponding gains in productivity. Support for reasonable measures to permit the survival of a healthy mining industry in the United States will afford protection against a costly dependence upon foreign sources for supplies.

Peace and prosperity

The political slogan of the day is peace and prosperity. But who can be confident that either the peace or prosperity is stable or long lasting? Possibly an uneasy peace may see growing competition in commercial fields play havoc with our high-cost prosperity.

The nations of the world have recovered from the devastation of war and their farms, factories, and mines are producing large quantities of goods for export. We face the problem of meeting the competition that we have reestablished and continue to aid and support.

But in any event, this world of ours in the foreseeable future promises to be a dangerous place for the credulous and unprepared. We can enjoy the blessings of peace and prosperity only through the strength that comes from our material resources and our self-reliance as a free people. If we heed the lessons of history we will keep our Nation strong, avoid inflationary expedients, and trust our security primarily to our own good resources.

Summary of the Colorado River Storage Project

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following summary of the Colorado River storage project:

THE COLORADO RIVER STORAGE PROJECT AND PARTICIPATING PROJECTS

WATER SUPPLY

The Colorado River is the last remaining major water resource available to the upper basin States (Colorado, New Mexico, Utah, Wyoming).

WATER SOURCE

More than 90 percent of the water in the Colorado River system originates in the four upper basin States.

COMPACTS

The beneficial consumptive use of the waters of the Colorado River system was divided by compact between the seven basin States in 1922 and approved by the United States.

The beneficial consumptive use of the waters apportioned to the upper basin States by the 1922 compact was apportioned among the 4 upper basin States by compact approved by the 4 upper basin States and the United States in 1949.

DEVELOPMENT IN THE LOWER BASIN UNDER THE RECLAMATION LAW

In 1928, the Boulder Canyon Project Act was passed with the aid of the upper basin States and since that time, the Hoover Dam and powerplants, the Parker Dam and powerplants, the Davis Dam and powerplants, and the All-American and Coachella Canals and the Morelos Dam and canals in Mexico have been built. All the physical facilities necessary to the full utilization of the water uses apportioned to the lower basin and Mexico have been built. The needs of the upper basin and the continued orderly development of the river now demand and justify a project to provide for such development.

THE UPPER BASIN DEVELOPMENT

There has been little development in the upper basin since 1922 but now after 20 years of intensive investigations and the expenditure of $10 million a proposal for the development of the upper Colorado River under the terms of the Colorado and upper Colorado River compacts has been made by the United States Bureau of Reclamation. This project called the Colorado River storage project and participating projects is a basinwide proposal, which, when carried out, will provide the facilities necessary for the upper basin States to use their share of the Colorado River water resource. The proposal is both unique and complicated and must be carried out as a single basinwide project and constructed in two or more stages.

PROJECT OBJECTIVES

The project must and will provide for:

(a) Complete regulation of the Colorado River above Lee Ferry by providing holdover storage reservoirs (water banks), so that water available during wet seasons or wet years may be made available during dry years or seasons. Such holdover storage will be large—more than 25 million acre-feet of silt storage. This water bank must be filled now while unused Colorado River water is wasting into the sea.

(b) Water for consumptive use by direct diversion or by exchange, both within and without the Colorado River Basin.

(c) Facilities for regulating, controlling, and conveying water from its river source to the points of use for municipal, industrial, and agricultural purposes.

(d) Generation of hydroelectric power the net revenues from which will help pay the costs of the project which are 99 percent reimbursable.

PRINCIPAL FEATURES OF THE PROJECT

The initial phase of the Colorado River storage project which will require 25 to 30 years to complete consists of 4 storage dams and reservoirs (at Glen Canyon, Flaming Gorge, Curecanti, and Navaho) 3 powerplants (Glen Canyon, Flaming Gorge, and Curecanti) and 11 participating projects. The total storage capacity of the reservoirs is 32,080,000 acre-feet, the total generating capacity is 912,000 kilowatts and the participating projects will provide for 48,000 acre-feet of water for domestic and industrial purposes, deplete the flow of the river 433,300 acre-feet for irrigation purposes and will provide water for 143,020 acres of new land and supplemental water for 243,470 acres of land now being cropped.

COST OF THE PROJECT

Based on H. R. 3383 as amended the total estimated cost will be approximately $760 million. Of this total approximately $460 million will be for power and municipal features which will be repaid with interest and $300 million will be repaid without interest. This expenditure will be made over a 25-to-30-year period averaging less than 30 million per year.

PER-ACRE COSTS

The per-acre costs on the 11 participating projects vary from $210 on the LaBarge project in Wyoming to $794 on the central Utah project in Utah.

These costs are spread over a 50-year period. The annual costs per acre vary from $4.20 to $16.

These costs are reasonable and well within the limits of increased production per acre after water is made available. In fairness the cost per acre should be compared with the value of the land 50 years from now when the final payment will be made.

Fifty years experience on reclamation projects shows that the cost of supplying water to the land has averaged from 2 to 3 times the market value of the land and water at the beginning of the payout period. At the end of the payout period the market value of the land and water is from 3 to 4 times the cost of supplying the water.

No acre of land proposed to be irrigated under the participating projects will show an increased production after water is made available, less than the annual repayment plus the cost of operation, maintenance, and replacement.

The propaganda against the per-acre costs of this project have no basis in fact.

REPAYMENT

The cost of the power and municipal features will be repaid with interest and will place absolutely no burden upon the taxpayers of the Nation. The cost of the irrigation features allocated to the water users will be paid back by the water users in 50 years plus a 10-year development period without interest. The balance of the cost allocated to irrigation will be paid back from power revenues from project powerplants without interest.

JUSTIFICATION FOR INTEREST-FREE MONEY

The policy of providing interest-free money for irrigation features or reclamation projects is more than 50 years old. It is in harmony with national policy, more than 150 years old which provided for Federal aid to help build waterways and improve harbors, to build railroads, ships, airplanes, to provide for flood control and to aid the development of critical industries. For example, wagon roads were supported with land grants of 3,359,188 acres, canals and rivers with land grants of 6,842,921 acres and railroads with land grants of 37,807,688 acres. The Federal Government in recognition of general public benefits is still spending billions on rivers and harbors and flood control, little of which is reimbursed. Interest-free money for irrigation features is payment by the Federal Government for general public benefits resulting from the creation of new wealth, a broadened tax base, new jobs, new homes, new investment opportunities, and increased national stability.

There is still another reason why interest-free money should be provided for the construction of irrigation features of reclamation projects. The Reclamation Act of 1902 created a revolving fund called the reclamation fund out of which funds for the construction of reclamation projects would come. The sources of income to this fund is the natural resources in the reclamation States. None of this fund comes from direct appropriation except on a loan basis. The principal sources are sale of public land and timber, sale of oil, gas, and mineral leases, royalties, power revenues, repayments from projects and other miscellaneous sources. This income to the reclamation fund comes from the reclamation States and no other State puts in a dime. In 1954 the States of Colorado, New Mexico, Utah, and Wyoming contributed more than $20 million to this fund. This annual contribution is increasing rapidly.

The total cost of the irrigation features of the Colorado River storage project will be approximately $300 million to be expended over a period of 30 years, an average of $10 million per year. This is the only money that is interest free. The upper basin States' contribution to the reclamation fund every year will be in excess of $20 million per year. The upper basin States should not be required to pay interest on money derived from the sale of their natural resources. Using money out of the reclamation fund contributed by these States will place absolutely no burden on the Federal Treasury and cannot possibly place any burden upon any taxpayer in any other State. The reclamation fund bank will always have sufficient funds to pay for the irrigation features of the reclamation projects. These features pay as they go. Federal funds out of the Treasury to a limited extent will be required to build the power and municipal features which constitute two-thirds of the cost of the project, but these costs must include interest charges so in this area there is no burden upon the general taxpayer. There can be no interest charge when you use money on deposit in your bank (reclamation fund) to pay the construction costs.

THE PROJECT IS A CONTINUING SOURCE OF REVENUE

Water is a renewable resource. Hydro power is a renewable resource. After the costs of this project are paid back the project power plants will continue to pour into the Federal Treasury more than $20 million a year.

NO PUBLIC VERSUS PRIVATE POWER CONTROVERSY

There is no power-policy issue in this project. Ten private power companies appeared in support of this project. The power will be sold under the provisions of the reclamation law which includes the preference clause. There is no Federal subsidy to power in this project. The power will be sold at competitive rates, expected to be about 6 mills at the bus bar or load center. Thus the users of power will contribute to the project costs.

AGRICULTURAL SURPLUSES

This project will not add to the agricultural surpluses for the following reasons:

(a) The construction schedule will prevent any material farm production within 10 years of the date of authorization. The surplus may be resolved by that time.

(b) During the second 10 years of construction not more than one-half the 143,020 acres can possibly be brought into production.

(c) The principal crops to be grown on this acreage will be specialty crops, fruits and vegetables, alfalfa, and forage for cattle and sheep which feed on the ranges during the summer. The upper basin States are even now in a deficit-feed area, and Federal aid has had to be extended to them.

(d) Most of the wheat grown in the upper basin States is on dry land. As water is put on these areas the land goes out of wheat and into other crops. Wheat grown on irrigated land is not the most profitable crop.

(e) The population of the United States is growing at a very rapid rate and it is estimated that by 1975 every acre of tillable land will be required to provide the food and fiber needs of the United States. By the time this project comes into full production the crops grown will be urgently needed.

(f) The principle of the soil bank will not be violated. In the case of this project it is the water bank that is needed. This project must be started now so that the water now wasting into the sea may be put in the water bank (storage reservoirs) and made available to be drawn upon when the facilities are ready to put the water to beneficial consumptive uses. It will take at least 7 years to build the dams and 10 to 15 years to fill them. The water bank must be filled as soon as possible while water which is wasting into the sea is available for the filling.

NO INJURY TO LOWER BASIN RIGHTS

The Colorado River compact apportion 7½ million acre feel of beneficial consumptive use of the upper basin States. In addition, it provides that the upper basin States may not deplete the flow of the river at Lee Ferry to less than 75 million acre-feet in any consecutive 10-year period.

The total consumptive use by the upper basin States upon completion of this project will not exceed 4 million acre-feet out of their 7½ million. There cannot possibly be any interference with lower basin rights as a result of this project. In fact, H. R. 3383 specifically requires strict compliance with the applicable interstate compacts.

The Supreme Court recently held that there is no legal controversy between the upper and lower basin States.

How the Farmer Feels About Benson, Soil Bank, Prices, and Politics

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1956

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Farm Management magazine taken from an advance proof of the March 1956 issue:

HOW THE FARMER FEELS ABOUT BENSON, SOIL BANK, PRICES, AND POLITICS—POLL SHOWS MAJORITY OPPOSE SUBSIDY—FAVOR BENSON, GOP, AND SOIL BANK PLAN

Farm Management put its editorial finger on the pulse of the Nation's farmers in one of the largest opinion surveys ever attempted by a farm publication—and discovered the majority of Western farmers take a dim view of price supports, favor soil bank restrictions, and think Secretary of Agriculture Benson is doing a good job.

On the basis of first returns from the questioning of some 50,000 farmers and stockmen, it is apparent that opinion on soil bank policy is divided; but, significantly, only 5½ percent were outright opposed to the soil bank plan. More than half of those submitting early replies favored restricting payments to those who do not graze livestock on diverted land.

The vital election-year question, "Which do you think offers best deal for the farmers: Democrats or Republicans?" brought forth 65 percent in favor of the GOP. And 64.5 percent of the early returns were pro-Benson.

Those polled were so enthusiastic over Farm Management's plan to obtain a composite of the modern farmer's plight and his view on remedial proposals, that virtually all made additional comments on the questionnaire or sent along detailed views in accompanying letters.

"Farm supports should be reduced 10 percent each year until there are none," said W. C. Emery of Salinas, Calif., in a typical comment.

Another Californian, R. Merrit, of Santa Margarita, agreed. "It is not price supports, soil banks, controls or bureaus that has made this country's standard of living the highest in the world," he said. "It is free enterprise."

SUPPORTS

L. Lakin, of Tolleson, Ariz., feels that "free markets for all commodities, with no supports would, within a reasonable time, eliminate the necessity for soil banks and subsidies." His view is shared by reader M. Haines, of Quincy, Wash., who said he feels that "the only help Government should give farmers is fast tax writeoffs and liberal but realistic long-term operating money such as big business gets."

Of those replying to the four-part price-support query, 40 percent wanted no supports whatsoever; 26 percent favored flexible supports; 20 percent wanted 90-percent supports on all major farm products, and 14 percent favored the two-price plan.

"Eliminate all supports and you will soon eliminate all the farmers who have to have supports to live and who produce just enough to create the surpluses," said an Arizona reader.

SOIL BANKS

The survey, in order to present an accurate picture of the Nation's overall farm and livestock situation, encompassed a cross section of Farm Management readers, as well as nonsubscribers. The first large segment of replies, compiled for this initial presentation, was largely from western areas.

This group was 52 percent in favor of restricting soil-bank payments to those who do not graze livestock on diverted land. Thirty percent favored free choice by farmers as to what use is made of diverted acres. Only 5.5 percent opposed the soil-bank plan.

Views of the oppositionists were well summed by Californian John O'Neal, who commented: "I do not believe in any form of a soil bank. It will be detrimental to land. The large farmer will have too much advantage over the small farmer."

Waldon Branch, of Midvale, Idaho, believes the soil bank "would just help the big wheat man. In time it will hurt the corn man • • • and to enforce it right will cost a lot of money."

FEDERAL PAYMENTS

On the issue of restricting Federal payments, 35 percent of those submitting early replies favored making support or land diversion payments to all, with income restrictions. Thirty-four percent favored restricting payments to farmers with annual incomes of less than $15,000. Those favoring restricting payments to farmers with $25,000 a year income numbered 19.5 percent, and 11.5 percent said set the restriction at $50,000.

"Put a maximum amount on what an individual may receive, regardless of income," said one Californian, Carson Hubbard, of Tipton. Another, D. Eljah, of Brawley, thought supports "should be on a dollar basis, and when a farmer produces above the set amount—then no more money."

Anyone who ever doubted that America's farmer is still a rugged individualist should thumb through the thousands of replies this Farm Management survey prompted.

"Let the farmer run his own affairs," demanded P. J. Conrad, of Yakima, Wash. "The farmer without hope of easy money from the Government will raise what he can sell and sell what he raises—with less cost to the consumer and more satisfaction and profit for himself. He may have to do some of his own work, have a few less new cars, but he will be a better citizen."

Not quite so vociferous was O. W. Wagner, of Nampa, Idaho:

"I am not quite as rugged an individualist as I once was," he wrote. "All I need to do to determine that is to ask my banker. I have no quarrel with bigness as such • • • but it has been proven over and over again in foreign lands that a nation of a few getting a stranglehold on agriculture and industry eventually deteriorated. Therefore, I believe a limit on the amount any one individual can receive on a crop-support loan will arrest the present trend of bigness in agriculture."

"This restricting of payments, I feel, is un-American and undemocratic," counters S. V. Christierson, of Salinas. "A law of that sort should apply equally to everybody, providing no payment permit an actual profit."

POLITICS

Republicans were out ahead in political party preference by nearly 2 to 1 in the first block of returns, with 65 percent of those replying indicating they'll go for the GOP. Thirty-four percent were pro-Democratic, and 5 percent favored a third party.

Some, however, were pretty disappointed with the entire Washington scene.

"The Democrats have forgotten the cattleman just like the Republicans have," said L. Gienger, or Chilagum, Oreg. "Do half the cattlemen have to go broke before the other half will ask for help? I say if you support the farmer, wool growers, merchant marine, post office, airlines, big business, half the world, and all the armies—it's time you give the cattlemen a lift • • • at least get his costs in line."

Typical of the flood of pro-Republican comment from those polled was the analytical approach to farm problems offered by James T. Skinner, of Belfry, Mont.:

"I believe that if this soil-bank plan by President Eisenhower is given a fair chance to work by all farmers, that it will eventually eliminate our surplus crop trouble and slowly lead us out of these low crop prices. It seems to me that it is the most sensible plan offered to the American farmer yet, but it will take time to achieve these results. However, I don't think Secretary Benson is in touch with the farm problem at all. I believe he is well-intentioned but lacks the proper leadership to solve some of these difficulties. He seems to prefer a wait and see policy which, as every one of us knows, is getting us nowhere.

"I believe strongly in flexible price supports with a floor under which crops would have a fair limit," he continues, "but I believe the one thing that will help to solve our problems more quickly is better, more adequate marketing. I believe this to be our greatest weakness and one that is continually causing farmers and taxpayers alike no end to our surplus that continually accumulates."

SECRETARY BENSON

Does the average farmer think Secretary of Agriculture Benson is doing a good job?

Farm Management's poll shows that 64.5 percent favor Benson's efforts. And this controversial question prompted hundreds of footnotes and letters.

Many felt he was doing a good job "but * * *"

Said Jim F. Lewis, of Tubac Ranch, Tumacarori, Ariz.:

"I know there is a lot of opposition which he has to contend with which would make a man's job hard. But so far I think he has done a fair job. * * * I do know if hog prices don't come up soon I will be put out of business."

Lewis said he raises about 5,000 hogs a year, has spent nearly $100,000 equipping his 1,800-acre ranch and faces additional expenditures of $60,000, "and if something isn't done pretty soon not only I, but God knows how many other hog raisers, will go out of business and into the poorhouse."

"There is no doubt of the inteligence and sincerity of Secretary Benson," says P. B. Wand, of Pleasanton, Calif., "but hard-hearted realists are needed to meet our problems. The squeeze the farmer is caught in is apparent, and Benson has done a poor job of publicizing the plight of livestock men and farmers to the public. He would be more appreciated and have more stature if he would speak up rather than always say that everything will work out all right for the farmers."

Outright oppositon to Benson was sounded by U. F. Kluesner, of Leadlore, Idaho:

"He has foreseen the drop in livestock prices and the best thing he has come up with is, 'We shall study the problem.' Our agricultural secretary should be a man of action and always on the alert for the good of the farmer and rancher * * * and to act at once when a problem shows itself—not when it's too late."

Farm Management, anxious to obtain a complete picture of the Nation's agricultural problems and to mirror the farm and ranch scene for its readers, will continue compiling results of the survey, tabulating percentages and reporting results to its readers. Next issue a more comprehensive report will be presented. Meanwhile, readers and friends who have not participated in the poll are urged to study the accompanying list of questions and send in their answers.

Every questionnaire will be tabulated, all letters carefully read—and the results made known. However, the editors, understandably, cannot publish excerpts from every letter.

Final tabulation of the returns will provide what is probably the first accurate cross-section of opinion from the West's farmers on the vital issues of our domestic economy, farm problems and political reactions.

The Significance of United States Control of the Sea

EXTENSION OF REMARKS
OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1956

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an address of Adm. Arleigh Burke, Chief of Naval Operations, at The Citadel, Charleston, S. C., on February 25, 1956. Admiral Burke is one of the great men of the Navy. His all 'round experience beginning from the trying times of the lean Pacific days during World War II, coupled with his great knowledge of the makeup of our Navy of today qualifies him to speak with eminent authority on the need for America's control of the sea.

Fate places Admiral Burke at the helm of leading the American Navy into the Nuclear Age. This is a terrifying responsibility—a responsibility well known to Admiral Burke. In this mission he will need the help of both branches of the Congress and the American people.

Mr. Speaker, Admiral Burke will fulfill his mission to his time and generation because he will get the aid of the Congress and the thanks of the democratic world for his contribution to our generation. He will place his knowledge in the perpetuation of our way of life as the leader of that important segment of our national defense and as the Navy's representative in the family of the Joint Chiefs of Staff.

The address follows:

THE SIGNIFICANCE OF UNITED STATES CONTROL OF THE SEA

You, as the students of The Citadel, I know, realize how very fortunate you are to have General Clark as your president. General Clark is a great American, one we all admire. General Clark is one of our greatest wartime leaders. His record, leadership, and valor in peace and war are an inspiration to all of us. General Clark brings to The Citadel the wisdom and experience which can only be gained in battle. His record as leader of American Army forces in World War II and, later, as leader of allied forces in the war in Korea, speaks for itself. Our country is fortunate that General Clark has chosen to continue his career here in Charleston in the service of American youth.

Charleston has always been a city with profound interest in our Navy; Charleston has always been a great supporter of our Navy, and it is a pleasure to be able to represent the Navy in Charleston today. Charleston, for some 300 years, has been one of our country's most important maritime centers. The port of Charleston has good anchorages and it is easily approached from the sea. We are reminded of this by the flags of the nations of the world putting in at Charleston. The importance of the port of Charleston is growing. From a sailor's point of view, the possibilities for future growth are immense.

The Navy yard here at Charleston is one of the Navy's most important for making ship repair and conversion of the ships of our fleet. It is a busy and effective yard. Thanks to the assistance and wise counsel of your Representative, Mr. RIVERS, the Navy is now beginning extensive work in new construction of our facilities at the naval mine base here.

It is good to be in Charleston for another reason. Navy people have traditionally enjoyed duty here. We have enjoyed visiting the city of Charleston. We have always felt at home here.

My friends, General Taylor and General Twining, have already talked to you about how magnificent Army and Air Force function as elements of our unified defense team. I am the sailor member of the team. It is my pleasure to tell you about the Navy's role in maintaining the security of our Nation. I am going to talk to you about the seas and about ships. I am going to talk from the point of view of the sailor.

The Navy's main task in any kind of war is to control the seas. We must control the seas in order to protect United States striking power against the enemy, to establish the scene of combat as far away from our homeland and as close to the enemy homeland as possible. We must prevent the enemy from attacking our own country through the ocean areas. We must prevent him from using the seas to further his own campaigns against our allies.

Control of the seas is more important to the security of the United States today than ever before. It is increasing in importance as navies move ahead through the atomic age.

The Navy is hard at work on new developments. We are adapting nuclear power for ship propulsion. Carrier-based aircraft and seaplanes of the Navy are moving rapidly into the supersonic era. The most powerful, most destructive weapons of the age are being installed on board ships in increasing numbers.

The United States, as you know, does not have a monopoly on nuclear developments. Nor is the United States the only Nation in the race for sea supremacy. The Soviet Navy is and has been engaged in an unprecedented shipbuilding program. The Soviets have also made significant progress in the field of nuclear energy. Some of their progress has surprised us in the past. We could be surprised again.

A glance at a globe is all it takes to appreciate the meaning of control of the sea in the nuclear age. This planet of ours is actually covered by a world-circling sea. The continents are actually large islands surrounded by the great oceans. The oceans form a worldwide interconnected transportation network. They provide easy access to the population and economic power centers of the world. In time of war, the seas become a giant battlefield greater in scope than any other battlefield on earth. The victor on this great battlefield will have access to the resources of the world. The victor on this battlefield will be in a position to organize the resources and populations of the world and project this vast power into the homeland of his enemy.

The free world is an oceanic confederation. The free world confederation depends for its very existence upon the security of the sea communications which bind it together.

One of the cornerstones of United States national policy is collective security. The United States has cast its lot with other members of the free world community through a worldwide system of mutual defense agreements. The United States has, in addition, built up over the years a huge overseas investment in foreign-aid programs, in a worldwide system of airbases, in stockpiles, and in the thousands of men we have deployed overseas. Unless the United States Navy can remain supreme at sea against all

opposition, our system of collective security will collapse, and with it will go the position of the United States as a world power. A lot depends on the ability of the Navy to do its job.

Let us now take a closer look at the Navy's role in our national defense and at the threats which confront the Navy in carrying out its role.

As you know, the United States supports and maintains military forces for two general purposes. First, we want to deter aggression if it is at all possible. We want to deter little aggression as well as big aggression. Second, if we cannot deter aggression, we want to win the war, whether the war be a big war or a little war. Now, in order to do these two things, we must have naval power—we must have naval power to control and use the seas from the beginning to the end of any type of war, whether it be nuclear war or nonnuclear war, limited war or global war, short war or long war. Many kinds of war are possible. No man alive is a good enough fortune teller to be able to tell exactly what kind of a war will face us or where it will start or how it will start, or how long it will last. We must be ready to defeat the enemy in any kind of war he may start, regardless of what tricks he may have up his sleeve.

If the enemy decides to start a war with an all-out atomic surprise attack, naval forces at sea will play a major role in retaliating. Perhaps after both sides have made their initial strikes, United States ability to take further action will depend on the mobile striking power we have dispersed at sea. Naval forces are also very important in limited wars. Most of the danger spots in the world, as you know, border on the seas. Naval forces deployed in troubled waters serve as an on-the-spot deterrent to aggression. Our Navy is ready to strike immediately in case of any type of aggression. Naval forces deployed in international waters can be assembled and employed immediately by the United States if necessary because they do not operate from bases in foreign territory.

In some critical areas of the world, we do not have bases from which we can operate land-based military forces. In these areas, the air power of our mobile carrier task force is the only United States air power available to us for use in case of trouble.

In event of a major war, the Navy must insure the safe arrival of the vast amount of food, weapons, fuel, and reinforcements required by our hard-pressed forces and allies overseas.

Each combat soldier, sailor, marine or airman deployed overseas needs about 5 tons of shipping to begin with, and over 1 ton per month to keep him supplied. The men themselves may, and often do, move by air. But before the planes can fly, we must set up the overseas air terminals and supply and support and defend them with men, weapons, and material carried over in ships. The ships must have been there first.

Our own forces and allies overseas must be continuously supplied with war materiel if they are to continue fighting. This will be particularly important after the initial strikes, for in many areas our forces will have to be supplied and supported from the very beginning. If these supplies are destroyed at the overseas terminals, they must be resupplied by ship.

The United States has commitments with over 60 nations—all overseas. To back up these commitments we keep major Army, Navy, Marine, and Air Force forces deployed on three continents across both the Atlantic and Pacific Oceans.

If we are to live up to our worldwide collective security agreements, we must use the seas.

If we are to protect our huge overseas investment in deployed forces, bases, and stockpiles, we must use the seas.

If we and our allies are to survive, we must use the seas.

When you look at a chart, the sea areas look like a huge wasteland. Actually, this is not the case. Every sailor knows that the oceans and seas of the world are a beehive of activity. Sailors also know that regardless of how tough the opposition may be, ocean traffic during war is heavier than it is during peace.

Take the Atlantic Ocean area as an illustration. On an average day, today for example, there are from 2,000 to 2,500 ocean-going ships at sea. In time of war this traffic would be much heavier. No other form of transportation can replace the oceangoing ship as the prime carrier of this traffic.

To use the seas, we must be able to keep our ships afloat and keep them operating. Our Navy must be able to defeat enemy submarine attacks, enemy air attacks, attacks by enemy ships, missile attacks, and any other kind of attack he might try to throw against us.

Let us now turn our attention to the Soviet Union, which today is the second-ranking sea power of the world and moving up fast. The Soviets have two fundamental naval requirements.

First, they must protect their sea frontier from attack. This is to leave their armies and air forces free to act in Europe and Asia. Second, they must cut allied sea communications to isolate our own and allied forces in Europe and Asia. Thus isolated, our forces and overseas bases will be easy pickings for the Soviets. They will be able to gobble up the free world in bite-size chunks.

To succeed, the Soviets need naval forces designed for their particular needs. Their navy is different from our Navy, for our Navy must be designed to fight and win in European and Far Eastern waters. We know that the Soviet Navy is being well designed to meet their needs.

The Soviets have a large and growing Soviet submarine force—about 400 submarines—and they are building more of them. The Germans almost cut us off from Europe in World War II. They started the war with 57 submarines.

The Soviets have added over a hundred new and modern destroyers to their fleet. They have 24 cruisers—17 of them are new. They have expanded and modernized their naval aviation. Their naval air arm totals about 3,500 aircraft. Its mission is to support fleet operations from land bases.

The Soviet Navy is training hard in all kinds of weather. Their sailors have higher living standards, special privileges, careful indoctrination, special training schools to establish a fine esprit de corps in the Red Navy.

The United States Navy is now deployed worldwide. We are deployed to meet our cold-war commitments, and we are also ready for general war. Our naval forces range in size from a very small force in the Persian Gulf to the powerful 6th and 7th Fleets.

We have limited forces in northern Europe. We have fleets on our own east and west coasts to defend the sea approaches to North America. We have forces in the Hawaiian area. We also have ships providing support to our forces in the Arctic. Some of our ships are now operating with the Antarctic expedition.

Let us examine the operations of the United States 6th Fleet and the United States 7th Fleet more closely.

The Sixth Fleet in the Mediterranean is the big punch of the collective NATO naval power of the western democracies. It is in a high state of immediate combat readiness. It has an extensive striking capability. It can be moved quickly to any danger area in the Mediterranean. It operates well dispersed to minimize danger in case of suprise attack. The influence of the 6th Fleet in support of United States policies has been tremendous.

United States ties with the countries of the Mediterranean and the confidence of these countries in United States ability to oppose aggression in this area have been strengthened. The 6th Fleet exercises a stabilizing influence on political matters in the Mediterranean.

The men who man the fleet have established a feeling of good will and friendliness toward the United States which cannot be measured in terms of dollars or military hardware.

The 7th Fleet has 4 attack carriers with 300 embarked aircraft. It also has an amphibious force of ships capable of carrying troops and equipment. The fleet also includes cruisers, destroyers, and submarines, and a logistic support force for sustained operations.

The 7th Fleet took part in the Korean war. Since Korea, our naval patrols have kept Communist activities limited. The 7th Fleet covered the Chinese evacuation of the Tachean Islands. It ferried large numbers of anti-Communist Vietnamese refugees from Haiphong to Saigon.

The 7th Fleet is ready for any assignment. It too is highly mobile and operates well dispersed.

Our overseas fleets serve as a deterrent to trouble, big trouble and little trouble, much like a strong and well-disciplined police force. Only when our fleets leave a particular area do the Communists there flex their muscles.

Our attack carriers are the central element of our naval striking forces. The aircraft embarked in these powerful ships will be among the first to retaliate in case of war.

The Soviet threat to our control of the seas is growing, but the power of our Navy is growing too. We are determined to stay ahead.

We are shifting to nuclear power as fast as technically possible, and as fast as funds become available.

We now have a good atomic delivery capability. It is rapidly becoming better.

We are shifting from guns to guided missiles so that we can knock down enemy aircraft at high altitudes and at long ranges.

We are developing surface-to-surface missiles that will increase our long-range offensive capabilities.

We are developing faster better attack aircraft. One of them now holds a world speed record never before held except by fighters.

We are developing high-performance fighter aircraft. We now have the fastest operational fighter in the world.

We have a high-performance jet seaplane in production that looks like a natural. It is fast. It has long range. It can carry a heavy load. It can operate from sea areas all over the world using submarines or surface ships for bases.

All of these planes will be able to use many types of guided missiles.

We are developing amphibious techniques which will enable our marines to land from the sea against all types of enemy coasts. The Marines are perfecting a vertical envelopment technique using helicopters that will be a big jump ahead in the science of assaults from the sea.

The nuclear-powered *Nautilus* has been in commission about a year. She is a wonderful underseas boat. She is fast. She is a true submersible. She will be difficult to defeat.

A sister ship, the *Seawolf*, will soon be commissioned.

There are, in addition, four new nuclear-powered submarines in previous programs.

We are asking for six more nuclear-powered attack submarines in this year's program. We are building a nuclear-powered cruiser and are designing a powerplant for a nuclear-powered aircraft carrier.

Nuclear power in our aircraft will come some day too, but that is further off in the future. When that day comes, our seaplanes will have nuclear power.

We have many types of atomic bombs now. Naval attack planes can carry most of them. More important, they can deliver against strong enemy opposition with accuracy and speed. But these planes are not limited to atomic bombs, they are versatile and can use conventional weapons equally as well in case of nonnuclear war.

New technologies are advancing the science of naval warfare at an unprecedented rate. Navies of the future, other navies as well as our own, will have greater striking power, greater mobility, and a greater capability for dispersion under attack than anything we have seen up to now. As the scope and violence of naval warfare continues to increase, the importance of our control of the seas becomes greater than ever. Your Navy is dedicated to the task of keeping the United States supreme on the world's oceans.

Your Navy believes in the future, the future of which all of you here are a part. We are determined to do our job. We are confident that we can do it. We know that together with our wonderful Army, our Air Force, and our gallant Marine Corps, we are ready to maintain our country's honor, prestige, and security against all enemies.

The Supreme Court, the Broken Constitution, and the Shattered Bill of Rights

EXTENSION OF REMARKS
OF
HON. HENDERSON L. LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. LANHAM. Mr. Speaker, I have in previous speeches tried to make clear to the Members of the House my alarm at the tendency of the United States Supreme Court to usurp the legislative functions of the Congress. I refer not only to the desegregation decision, but to the tendency of the Supreme Court to legislate. In this connection I introduced into the RECORD recently a criticism by the arch-conservative Wall Street Journal against what it termed "legislation" by the Supreme Court on the matter of the regulation by the Federal Power Commission of the gathering of gas at the wellheads of the States where it is produced. Lawyers everywhere are alarmed at the tendency—even those who believe in the integration of the races in our schools. This tendency is more fundamental and dangerous than even the controversial decision in the case recently decided by the Court declaring unconstitutional the segregation of the races in our schools.

In this whole connection I am, with leave of the House first obtained, introducing with my remarks, a dissertation by Mr. R. Carter Pittman, of Dalton, Ga., a brilliant lawyer and devoted student of the Constitution and our Bill of Rights. The dissertation is entitled "The Supreme Court, the Broken Constitution, and the Shattered Bill of Rights."

I do hope that a reading of this masterful statement of the case against legislative decisions by the Supreme Court will help awaken the people of our Nation to the danger that this trend poses to our democratic institutions and way of life:

I speak to you about the broken Constitution and the shattered Bill of Rights. They are the cherished relics of a proud people and mementos of a day that is dead. The universal ignorance with respect to them is appalling.

Schoolchildren are taught to recite from the Declaration of Independence. They think they know who wrote it. There is not one high school or college student out of each hundred in America who knows who wrote a single provision of the Bill of Rights. The percentage of college professors who can recite any provision of the Bill of Rights, except a part of the fifth amendment, is extremely low. About 90 percent of college graduates in America think that our Bill of Rights was written by Jefferson. If they have ever been told who wrote it, they were either misinformed or they have forgotten.

In 1951 the editors of Life magazine recorded in Life's Picture History of Western Man (p. 288), that John Adams was one of the most influential delegates to the Constitutional Convention of 1787. On the same page they named Jefferson as the author of our Bill of Rights. Adams was in England in 1787. Jefferson was in France when the Bill of Rights was written. Neither wrote nor influenced a single provision of either document. Life's editors found it more convenient to make up than to look up constitutional history. That has become an American trait.

Much of the Constitution and all of the Bill of Rights was originally written by history-minded laymen. They were written to be understood by laymen. They are therefore in simple language, easily understood.

Constitutions constitute. They constitute governments. They constitute the powers of attorney of public servants. Officers of governments must look to constitutions for the power they exercise. If the power is not conferred or authorized in the constitution then they don't have the power. The exercise of a power of government not authorized by the constitution is lawless usurpation.

The very first sentence of our Federal Constitution is as follows:

"All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and a House of Representatives."

Is there anything about that sentence that an intelligent person able to read should not understand? Is there any reason why that sentence doesn't mean what it says? If it doesn't mean what it says, what does it mean? If it means what it says, doesn't it mean that only the Congress of the United States can make laws? It means that the President can't make laws. It means that the courts can't make laws. It means that you can't make laws for me and that I can't make laws for you, because all legislative powers authorized by the Constitution are vested in the Congress by the Constitution.

The first amendment and the very first sentence of the Bill of Rights is: "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances."

Notice particularly the first line: "Congress shall make no law respecting * * *" freedom of religion, of speech, of press, of petition and assembly. If the Supreme Court can make law, we have no Bill of Rights. Freedom of religion, freedom of speech, freedom of the press and the right of the people to assemble and petition the Government for redress of grievances are predicted upon the proposition that only the Congress can make Federal laws. If the Supreme Court or the President or you or I can make laws there is no Bill of Rights, there is no Constitution and there is no Republic. If the Supreme Court can make that to be law today that was not law yesterday, we have a broken Constitution and shattered Bill of Rights.

As every lawyer and historian worthy of the name knows, there is no Federal common law distinct from that of the States. Federal courts follow the common law existing in the States prior to the adoption of the Federal Constitution. State courts find, follow, and are bound by common law. In finding it a few have been known to attempt to make law but Federal courts don't have that excuse for claiming or asserting a power to make laws in the guise of construing it.

The purpose of all sincere investigations is the discovery of truth. Basic truth is discoverable in the midst of external realities. It may not be manufactured by the mind. It is a tangible reality and is never new. Once found, it may be seized and held fast. Now let us seek and follow the truth wherever it may lead on the most vital issue that has concerned America in this age.

In its celebrated integration decision of May 17, 1954, the Supreme Court did not hold that the old "separate but equal" doctrine, laid down in *Plessy* v. *Ferguson* (163 U. S. 537), was bad law. It held that it was bad sociology. It did not hold that the facts (or truths), disclosed by the records in the cases before the Court, justified a departure from the "separate but equal" doctrine. It held that "psychological knowledge," apart from those records, was of more validity than factual truths.

The first point resolved by the Court was that for want of sufficient information it could not be determined whether or not those who framed the 14th amendment intended to abolish segregation. The Court said it "cannot be determined with any degree of certainty." When the Court said that, it knew that the same Congress that promulgated the 14th amendment passed two bills dealing with segregated schools in the District of Columbia. There the Federal Government had plenary jurisdiction to establish integration if it intended or wished it. The Court knew also that at that time every American State except five had segregated schools. The Court also knew that as soon as the carpetbaggers were run out of the beaten and prostrate South 3 more went white leaving only 2 integrated States. Therefore the Court knew that the 14th amendment came into being and matured in a segregated America. Therefore the Court could not and did not base its decision on anything in the Constitution.

The Court conceded in the Brown et al. decision that the records in the cases before it demonstrated equality of white and colored schools in respect to all tangible factors, and for that reason its decision could not turn on such tangible factors, saying:

"We must look instead" (not also) "to the effect of segregation itself on public education."

The Court then asked: "Does segregation * * * (alone) * * * deprive the children of the minority group of equal educational opportunities?"

The answer was: "We believe that it does."

Why? Because:

1. In the graduate-school case of *Sweatt* v. *Painter* (339 U. S. 629), "* * * this Court relied in large part on those qualities which

are incapable of objective measurement but which make for greatness. * * *"

2. In the other graduate-school case of *McLaurin* v. *Oklahoma Regents* (339 U. S. 637), "* * * the Court * * * again resorted to intangible considerations: * * * 'his ability to study, to engage in discussion and exchange views with other students * * *.' Such considerations apply with added force to children in grade and high schools. To separate them * * * solely because of race generates a feeling of inferiority as to their status in the community that may effect their hearts and minds in a way unlikely ever to be undone."

3. In the Kansas case, then before the Court, the trial judge had found that "a sense of inferiority affects the motivation of a child to learn. * * *"

Thereupon, the Court transplanted the nebulous "intangible" found in Kansas into the records of the South Carolina, Virginia, and Delaware cases, to fill with void the vacuum left in those cases by failure of proof.

Next came the Russo-Marxist "intangibles" transplanted from northern Europe to end all tangibles in governments of law:

4. "Whatever may have been the psychological knowledge at the time of Plessy vs. Ferguson, this finding is amply supported by modern authority. Any language in Plessy vs. Ferguson contrary to this finding is rejected."

Footnote 11 sets forth the "modern authority" the Court relied on. That "authority" appears to be in the field of sociology rather than "psychology," but that is of no moment, except to illustrate that when the court took its first step from "tangible factors" to "intangibles" and jumped from fundamental principles of law to pseudo-socio-science, it went in over its head. By the solemn confession of the Court, it abandoned the Constitution and the law and went to "intangibles."

Whatever they were, how did such "intangibles" find their way into the cases? They were not authenticated as "authority" by any method known to Anglo-Saxon jurisprudence or rules of evidence. If not in evidence, the universal rule is that it is harmful error, prejudicial to the adverse parties, for them to be considered by the Court.

We have scanned legal literature since May 1954 in an effort to find a respectable vindication of the Supreme Court's conduct but have found none. A few law-school professors have sought to defend the decision with that stupid sarcasm so popular now on a few college campuses, but no seasoned lawyer or judge has defended it.

The editors of the American Bar Association Journal voted not to print an article criticising the integration decision until they should be able to print a respectable article defending it. They are still waiting for a decent defense of the Court and the lawyers of America are kept in the dark by their own association and their own publication as to the extent of the crime committed against the Constitution by its own guardians.

The concept adopted by the Court to the effect that Negroes get an inferiority complex from associating with Negroes is an insult to the Negro race and to the intelligence of honest men of every race. We mention it to exclude it. Judicial notice of such a concept is unprecedented in judicial experience. To reach such a result the Court had to abandon law and facts and go to alien ideologies that are at variance with law and decency.

Under elementary and elemental law, a court may not use treatises in a field other than law, unless the treatises themselves are the very subject of inquiry. The doctrine of judicial notice extends only to those things of common knowledge that lie without the realm of science, or to that one science in which judges are presumed to be learned or experts themselves, the science of law.

Of frequent application is medical knowledge. Since that is a science without the realm of legal science and is not of common knowledge it must be proved under the oath of a member of the medical profession. He may not testify as to the knowledge of other physicians whether revealed by word of mouth, books, or treatises. Books themselves are not admissible, and may not be consulted by judges or juries. That is true, because hearsay evidence is no evidence. What a man, even though an expert, writes in a book or article on a nonlegal subject, is as much hearsay as if he wrote it in the Daily Worker. A party to a cause is entitled to have, and the law demands that evidence come to the bar of justice under the sanction of an oath; that a thorough and sifting cross-examination and an opportunity to impeach be afforded to shake and destroy it for any cause, including the intangible, or nebulous nature of it.

That law is neither new nor strange. It is as old as justice and as fresh as virtue. The Supreme Court is not a stranger to it. In *Pinkus* v. *Reilly* (338 U. S. 269), decided November 14, 1949, the Supreme Court, speaking through Justice Black, held that the use of nonlegal materials was illegal, illogical and unfair. If it was illegal, illogical, and unfair in 1949, what has happened since to conform such use to the sense of justice of the same judges?

In the Pinkus case the parties at least had an opportunity to rebut, to disprove and impeach by means other than cross-examination. In the integration cases no such opportunity was afforded to parties. The intangible considerations, discovered in Marxist publications, first appeared in the secrecy of the judge's chambers. Notice of it was first given to the defendants in the judgement itself. No precedent short of star chamber and high commission cases of the Stuart kings, 300 years ago, may be found for like judicial deportment. We thought the door closed forever on the precedents of those courts at the execution of the Earl of Strafford.

In *National Council of American-Soviet Friendship, Inc.*, v. *McGrath* (341 U. S. 123), the Supreme Court held that nonlegal materials could not be used by the Attorney General as a basis for listing an organization as communistic. Justice Black shamed the Attorney General, calling such conduct unfair. He said it was "abhorrent to free men." He should not complain that we agree with him. Three hundred years ago the English Parliament said it was treason. We agree with Parliament, too. If only an unfair person would do such a thing to a Communist organization, decency will not permit us to describe those who would do the same thing to the whole Caucasian white race—a people whose ancestors made the country free and great, whose loyalty has preserved it, and whose only crime is that its members want to keep their country free and their race white.

The Supreme Court has consistently held that the use of nonlegal materials for a purpose other than to aid the Court in taking judicial notice of a fact of common knowledge, violates the due process clause of the 14th amendment. An unanimous bench, graced by Brandeis and Cardoza, so held in *Ohio Bell Telephone Co.* v. *Public Utilities Commission of Ohio* (301 U. S. 292). There the Court said that the use of such material was a denial of "the rudiments of fair play"; that "to wander afield and fix" * * * the evidence * * * "upon proofs drawn from the clouds" * * * "is not the fair hearing essential to due process" * * * but is * * * "condemnation without trial." The Court held that "the fundamentals of a fair trial were denied to the appellant" when findings were grounded * * * "upon the strength of evidential facts not spread upon the record." What has the white race done to forfeit the benefit of the due process clause of the fifth amendment? The same words mean the same thing whether in the 5th or the 14th amendment.

Justice Brandeis said in *United States* v. *Abilene Southern Railway Co.* (265 U. S. 374): "Nothing can be treated as evidence which was not introduced as such." That rule was universal until the Supreme Court found it standing as a barrier to a decision that should defy the Constitution, the law, and the elementary facts of life. That rule became a casualty when the Court grounded its judgment on pseudo-socio-science, not a part of the record either as evidence or as law, and that could not be considered in the case without violating the Constitution.

In its integration decision of May 17, 1954, the Court was led into a vacuum by the semantics of sociological doctors, who found a judicial blindspot and practiced a fraud upon the untrained and unprofessional judges causing them to usurp the powers of Congress to make laws, and to victimize a helpless people. The most effective expert seemed to be Dr. Karl Gunnar Myrdal, who wrote the American Dilemma (1944). His 1,438 pages of psychological knowledge, and illegal and inadmissible claptrap, financed by Carnegie Foundation, overcame the Court. It was cited by the Court as the modern authority on which its decision was grounded. The American Dilemma is now Corpus Juris Tertius in American pseudo-socio-law.

Myrdal learned that the biggest blindspot in America is our pathetic ignorance as to the basic principles of American liberty. Marxists scream "academic freedom" and insist on the right to teach Marxism and Communism in our schools so we will know how to cope with it. No one insists on teaching the basic principles of American liberty. If one did he would be ridiculed as a reactionary. So Gunnar Myrdal found a vacuum or a vortex into which most anything could be thrown to pass for food. Thus he created an American Creed, that would have evoked universal laughter but for the fact that his creation was in a blindspot. Ignorace can't laugh for fear of being laughed at. On page 4 of his atrocity he defined his "creed" as "the fundamental equality of all men."

In the same breath he said its "tenets were written into the Declaration of Independence, the premable of the Constitution, the Bill of Rights and into the constitutions of the several States. The ideals of the American creed have thus become the highest law of the land."

He knew that what he said was an untruth. He knew that the Constitution and Bill of Rights were written to preserve the blessings of liberty—and that neither says a word about human equality. But Myrdal thought he was in a blindspot, and had that same feeling of security that an ambush gives to a midnight assassin.

Nevertheless, for fear some unbeliever might cite the Constitution on him he put his shoes on backwards to make tracks both ways. On pages 12–13 he said:

"Conservatism, in fundamental principles, to a great extent, has been perverted into a nearly fetishistic cult of the Constitution. This is unfortunate since the 150-year-old Constitution is in many respects impractical and ill-suited for modern conditions. * * * The worship of the Constitution also is a most flagrant violation of the American creed which is strongly opposed to stiff formulas."

In the same place he said that the Constitutional Convention of 1787 was "nearly a plot against the common people."

On page 18, lawyers and judges became anathema to the American people and the "American creed," because, as he says, "the judicial order * * * is in many respects contrary to all their inclinations."

As his pages of Slavic philosophy are turned, the "American creed" became the

amalgamator of races. On page 614, "• • • the cumbersome racial etiquette is un-American."

He praised Thomas Jefferson to heaven on page 8 for the equality content of the specious "creed," which he claims to have found in the Declaration of Independence. But he again reversed his shoes on page 90 and damned him to another place for proposing emancipation and simultaneous segregation of Negroes to Africa, in his Notes on Virginia.

Myrdal is not the only one to try to make an equalitarian Marxist out of Jefferson. On one of the huge marble panels on the left as one enters the Jefferson Memorial in Washington, D. C., is a fragment of one of Jefferson's sentences. As inscribed upon the panel the words are, "nothing is more certainly written in the book of fate, than that these people are to be free."

As written by Jefferson there was no period, but there was a semicolon and the sentence continued: "nor is it less certain, that the two races, equally free, cannot live in the same government." (The Jefferson Cyclopedia, p. 816.)

That clause was deliberately left off that panel by some equalitarian who loves every other country and every other race except his own. Jefferson was made to say something he didn't say and that lie is told on Jefferson, with the sanction of our Government, every hour of every day in stone. It is a fitting specimen of the morality of those who maintain it. It is exhibit No. 1 in the museum of equalitarian depravity.

While reversing his shoes in rapid succession, Myrdal's socks slipped off. The aroma of Russia became distinct.

On page 9 he exposed the central theme of Marxism in the midst of half-truths. Here it is: "• • • in the last generation, the inherent conflict between equality and liberty flared up. Equality is slowly winning. The New Deal during the thirties was a landslide."

For once Dr. Myrdal revealed God's truth. American liberty and Marxist equality cannot coexist. The Supreme Court affirmed that truth in Brown, et al. and swapped American liberty for Marxist equality. Dr. Myrdal is the modern authority for the swap, but the swap is an old story.

In the Constitutional Convention on June 26, 1787, Alexander Hamilton said:

"Inequality will exist as long as liberty exists. It unavoidably results from that very liberty itself."

Madison not only recorded that in his Notes of Debates, but adopted it substantially as his own and described the doctrine of human equality fictitious in a letter to Jefferson October 24 of the same year. Equality at creation was the doctrine of the Declaration of Independence, written to appeal to the simple-minded peasants and philosophers of France. The Declaration never became a rule of life in America. A lawyer who would plead it would be laughed out of court. It was assented to by John Adams who helped to write it. "But," said Adams to Taylor, April 15, 1814: "to teach that all men are • • • equal • • • is as great a fraud, as glaring an imposition on the credulity of the people as ever was practiced by • • • the self-styled philosophers of the French Revolution."

In Harvard's better days her Charles W. Eliot taught: "Inequality, not equality, • • • is the inevitable result of freedom." In Columbia's better days her Nicholas Murray Butler taught that equality is a "shibboleth." Henry James described the doctrine of equality as "slander" by "the paid scribes of old-fogyism which no man who is not an ass can believe." Lord Acton, Edmund Burke, John Morley and hundreds of others have exposed the specious thing.

Dr. Myrdal, the Supreme Court and Mr. James may labor the point, but it will never be imposed on the South. Nothing in our Constitution or Bill of Rights sustains the doctrine of human equality. The doctrine of freedom and the right to be unequal is in every line of them.

The doctrine of human equality never took root in America, North or South. At the end of the Civil War the carpetbaggers wrote it into the constitutions of six Southern States, at the points of bayonets. As soon as those carpetbaggers were driven out, all of those States except one went back to the doctrine of George Mason's Virginia Declaration of Rights of June 1776, "that all men are born equally free and independent."

George Mason's libertarian concept was copied into the French Declaration of Rights of 1789. In the bath of blood we know as the French Revolution, the phrase "All men are equal" was substituted in 1793. In 1940 the French Revolutionary motto: "Liberty, Equality and Fraternity" was stricken from the tomb of her liberty. That cluster of inconsistencies no longer tarnishes the tricolor of France. In 1946 the doctrine of human equality was stricken from the French Declaration of Rights and the George Mason concept of 1789 went back in exactly as it was. But too late. The French are now a bloodless race that sends a feeble voice. Equality made them so.

Heaven and Hell are monuments of God's truth eternal that all men are not equal and that segregation is the pattern in the life everlasting.

It is inequality that gives enlargement to intellect, energy, virtue, love and wealth. Equality of intellect stabilizes mediocrity. Equality of wealth makes every man poor. Equality of energy renders all men sluggards. Equality of virtue suspends all men without the gates of Heaven. Equality of love stultifies every manly passion, destroys every family altar and mongrelizes the races of men.

Equality of freedom and independence is the American proposition. It cannot exist without inequality in the rewards and earned fruits of that freedom and independence. It is inequality that makes the pursuit of happiness something more than a dry run or a futile chase.

Equality may be imposed only in a despotism. Equality beyond the range of legal rights is despotic restraint. It is nowhere imposed except in the communistic sewers of slavic slavery. As Francis Lieber pointed out in his great work on Civil Liberty (p. 334), 100 years ago, "Equality absolutely carried out leads to communism."

Equality homogenizes so that cream no longer rises to the top. It puts the eagle in the henhouse that he may no longer soar. More than 2,000 years ago Aristotle proclaimed that equality may exist only among slaves. Russia has proved the postulate.

The October 10, 1955, issue of Life magazine carried an editorial entitled "In Memoriam, Emmett Till." That editorial was designed to appeal to the emotions of the ignorant and to stir up hatred against the white peoples of Mississippi and the South who had no part in the unfortunate occurrence and committed no crime except that of living happily in the South, minding their own business. The editors wrote of Emmett Till:

"He had only his life to lose, and many others have done that, including his soldier-father who was killed in France fighting for the American proposition that all men are equal. Those who condone a deed so foul as this are in danger of losing their souls."

The editors of Life magazine gave no details as to how Pvt. Louis Till met a hero's death. They passed over the facts in haste to get to the hero. The records of the Army show that Pvt. Louis Till, the fighting hero, was executed in Italy on July 2, 1945, at the age of 24, for the crime of rape and murder. He raped two Italian women and murdered another. As that buck Negro, was fighting, raping, and murdering those white women of Italy in the year 1945, he was doing exactly what Life magazine said he was doing. He was "fighting for the • • • proposition that all men are equal," but thank God, it was not an American proposition. Equality of freedom is Americanism. Equality of men is Marxism. The proposition that all men are equal in all respects and that it is not wrong to reduce the chastity of white womanhood of America to the level of black brutes is a cardinal tenet of communitsm. No, we don't condone a deed so foul as the killing of Emmett Till, nor do we condone the depravity of the editors of Life magazine. It is they who have lost their souls.

Shortly after the decision in Brown et al., Attorney General Brownell and Vice President NIXON were going about the country gloating over it. They confessed that the decision was dictated by a desire to counteract Russian propaganda. In other words, they bragged that it was done to please the Communists. That it did. Homer stated the real reason for Russia's interest better than Mr. NIXON or Mr. Brownell in his Illiad when he said:

"A bloodless race • • • sends a feeble voice."

In the December 13, 1955, issue of Look magazine, page 40, Justice Douglas marvels that in the summer of 1955 he found the white and yellow races segregated in Asiatic Russia. Russia plans a blooded race for herself and a bloodless race for America. All proceeds according to plan.

The South has no racial problem and has had none for near a half century. Its racial problems were solved by segregation. We don't intend to turn back to the horrors of a day that is dead to please alien sociologists.

We don't intend to go back to the kind of racial riots and the strife that now exist in some of the integrated cities of the North. Racial problems have become so serious in Chicago that the leading newspapers, radio stations, and television stations of that city recently entered into a conspiracy to suppress race-riot news and to deny freedom of the press. This un-American conspiracy was hatched up by the City News Bureau editor, Isaac Gershman. The agreement making up that conspiracy forbids the dissimination of factual news about race riots and gang fights. The New York Times of Sunday, July 24, 1955, page 35, tells about it:

"The need for a program such as Mr. Gershman's is emphasized by the 15 months of racial trouble at the Trumball Park low-rent housing project on the far South Side of the city.

"Since August 11, 1953, when the first of several Negro families moved into the Federal housing facility, the neighborhood has been marked by violence, rioting, beatings, vandalism, and racial clashes. To keep peace, as many as 1,353 policemen have occasionally been on duty at the 426-family development. An average of 300 policemen are always on duty. Nearly 250 arrests have been made."

For the last 2 years the city of Chicago has expended more police man-hours to keep down race riots and race clashes in one integrated Federal housing facility than has been expended for the same purpose in the entire South for 50 years. Segregated races don't clash in Russia or in America.

As late as 1952 the Supreme Court revealed its awareness of the internecine strife caused by forced integration in Chicago. In the case of *Beauharnais* v. *People of Illinois* (343 U. S. 250), Justice Frankfurter used the following language:

"From the murder of the abolitionist Lovejoy in 1837 to the Cicero riots of 1951, Illinois has been the scene of exacerbated tension

between races, often flaring into violence and destructions."

In the same opinion he described many of the race riots that have occurred in Chicago and vicinity in recent years. He continued:

"Violence between racial and religious groups must be traced to causes more deeply embedded in our society than the rantings of modern Know-Nothings. Only those lacking responsible humility will have a confident solution for problems as intractable as the frictions attributable to differences of race, color, or religion. * * * Certainly the due-process clause does not require the legislature to be in the vanguard of science—especially sciences as young as human ecology and cultural anthropology. * * * It is not within our competence to confirm or deny claims of social scientists as to the dependence of the individual on the position of his racial or religious group in the community."

The Court hadn't read Myrdal's American Dilemma and didn't know enough about sociology, human ecology, and cultural anthropology to decide racial issues in 1952. But by 1954 the judges had become so expert in pseudo-socio-science a la Myrdal that it abandoned the Constitution, the law, reason, and commonsense to embrace a doctrine unknown to God and unknown to any government of law in the history of civilization.

Both before and after he became President of the United States, Franklin D. Roosevelt knew, as every man of experience and character should know, that in order to promote good race relations the white and the black races must be kept separate. First in 1928 and again in 1933 after he became President he caused deeds relating to tracts of land at Warm Springs, Ga., to be made to himself personally by a corporation wholly owned by him. The fifth covenant in each of those deeds was:

"Fifth. Neither said land, nor any part thereof, shall be sold, rented, or otherwise disposed of to any Negro or other persons of African descent, or to a corporation or association owned or controlled by Negroes."

Those deeds may be examined in the office of the clerk of the Superior Court of Meriwether County, Ga., by any interested citizens. The first is in book 24, page 388, and the other in book 29, page 411.

When Mrs. Eleanor Roosevelt moved into the White House she found that the Hoovers had integrated the White House staff of servants. She immediately unscrambled the staff because, as she herself said:

"A staff solid in one color works in better understanding and maintains a smoother running establishment." (Henrietta Nesbit, White House Diary, p. 78.)

If she practiced one way and preached another that is a matter for her to square with her own conscience and her God.

On April 2, 1948, an American soldier, with long and varied experiences with all races in war and peace, testified in effect, before a congressional committee that the Negro makes a second-class soldier, saying in part: "* * * if we attempt merely by passing a lot of laws to force someone to like someone else, we are just going to get into trouble" (Senate UMT hearing, Apr. 2, 1948, p. 996).

We turn over Dwight D. Eisenhower, the discriminating soldier, to be buffeted by Dwight D. Eisenhower, the equalitarian politician.

In the first edition of the Joe Louis Story (Life magazine, November 8, 1948, p. 129), Joe pointed out how the white people of the South excel those of the North in their harmonious relations with the Negro race. There he said: "* * * in all those years in Alabama I never knew anything about race or anything like that. No one talked about it, as I can remember. If there was lynch talk it never got to me or my folks. Not like now. I never got to know about such things until we got to Detroit."

Joe was forced to leave that statement out of his bound book because it was the truth and his northern publisher told him that the truth about the people of the South wouldn't sell, and that its publication in Life magazine was a mistake. Yankee ingenuity? Yes! No one will buy the truth about the South.

The sectional prejudices of the ignorant people of the North against the white people of the South is the most unreasoning prejudice known to history. It is a flame that never quenches. It feeds upon itself. The northern press can't afford to attempt to teach the masses of the North that there is no basis for sectional prejudices. To do so would mean bankruptcy.

The success of Life and Time magazines is due in large part to their policy of fanning sectional prejudices. That is the secret of the recent success of Communist infiltrations into northern hate groups. The South is an ideal whipping boy because no magazine with national circulation is published in the South and most of her leading newspapers are owned by residents of the North—some as far north as Moscow. The South has nothing with which to fight back except the ballot. Many of her Congressmen had rather see their pictures in Life or Time than to see their constituents treated fairly. The people of the South have learned slowly. Now a splash in Life or Time is rapidly becoming the kiss of Judas for southern politicians.

The good white people of the North are just like the good white people of the South. The blood that runs in their veins is our blood. The difference is that those in the South have had more experience with racial matters than those in the North. Of the thousands who move from the North to the South yearly, 75 percent embrace the southern point of view before living in the South 3 years and 95 percent have embraced it within 6 years. The South learned from experience to treat the good Negro white and treat his race black. The North treats the good Negro black and his race white. That just doesn't work. The blue birds, the black birds and the red birds get along beautifully in nature because they recognize the integrity of the other's breed. It is when they try to roost on the same limbs and use the same nests that the bird riots begin.

If you mix and closely confine 1,000 white chickens with 1,000 red chickens in the same house, a few days later the whites will be in one end and the reds in the other. Mix 10 whites with 1,000 reds and a few days later the whites will all be dead. Fools, sociological judges and perverts call that prejudice. If so, it is the prejudice of God.

The birds of the air, the beasts of the field and the fish of the sea practice segregation. God made it that way and a police force can no more stop it among birds and fish than it has among people. A newspaper conspiracy will not long keep mankind from knowing about the birds and the bees and the beasts and the fish.

The United Nations now distributes a booklet to our school children entitled "What Is Race?" On page 9 it says, in part:

"Is there a pure race? You can talk about pure bred races of dogs but you can't apply the same idea to human races."

The book then goes on to demonstrate by "scientific" data that purity and inequality may exist among all species of animals except the human species. This is a sample of the "fine work" the United Nations is doing with the money we work for, but which becomes the "take home pay" of traitors rather than our own. A Congress that hires parliamentarians, but no constitutionalists, to advise it, is likely to appropriate American money to establish or sustain any way of life except the American way.

The results of the decision of the Supreme Court has been to crystalize and solidify the determination of our people to live close to the Constitution and the law of the land. We don't intend to swap liberty for equality if we can help it. We don't intend to respect modern authority written by Karl Gunnar Myrdal or Karl Marx. We don't intend to respect any court decrees based upon such "modern authority."

The legislative powers granted by the Constitution are vested exclusively in the Congress. The first line of the Constitution says that, as we have pointed out. In order that there might not be any doubt as to where the new and dangerous powers conferred upon the Federal Government by the 14th amendment should be vested, the very last clause of the amendment was made to say:

"The Congress shall have power to enforce, by appropriate legislation, the provisions of this article."

That clause is so plain a fool may understand it, but the Supreme Court held in effect that the word "Congress" means "Supreme Court."

The Constitution confers no power upon the Congress to legislate with respect to education. The power to legislate with respect to that subject remains in the States in accordance with the plain language of the 10th amendment and other provisions of the Constitution, fortified by honorable precedents and practice for 175 years.

It is true that the 14th amendment guarantees, as against State power "equal protection of the laws." It is equally true that "equal" doesn't mean "same." The word "equal" presupposes the existence of a plurality of objects for the protection afforded. Equal schools for Negroes cannot be the same schools as those for whites. If the same, they can't be equal.

Article 6 of the Constitution defines the "law of the land." It is the Constitution, and the laws and treaties made in pursuance thereof. The framers of the Constitution were careful to exclude executive and judicial decrees from their definition of the law of the land. If Federal officers knock on the door in the name of the Constitution, laws, and treatises, they are to be respected, but when they come knocking in the name of and under the authority of Karl Gunnar Myrdal, Karl Marx, or the lawless decrees of sociological judges, they must not be obeyed. A trust to keep we have. That trust is to resist tyrants and leave to our children a full measure of that freedom to which we were born and which is their birthright. The Constitution and Bill of Rights must be made to stand as a barrier against such a government of flesh. "The right to keep and bear arms" as protected by the second amendment is defined in the amendment as "necessary to the security of a free state."

A few years ago a Supreme Court Justice made the funny remark that "the Constitution is what the Supreme Court says it is." Everybody laughed. It made a good joke then, but depraved men soon began to say it without smiling. It is no longer a joke. The Constitution means exactly what it says. It is so plain that it yields little to construction but, like the Ten Commandments, it yields everything to depravity.

The framers of the Constitution knew their history. They knew that a tyranny may not exist without tribunals that can, in effect, make, judge, and execute laws without the interposition of the representatives of the people, acting in legislative assemblies. The lash of star chambers left their scars in the minds of the descendants of those who bore those scars in the flesh. The framers knew that the greatest work of God is a free, courageous, and virtuous judiciary, but they also knew that a pliant, servile, and time-serving judiciary is the greatest curse of God. While the framers

were careful to emancipate the judiciary and set it up as a coordinate and independent department of government, they were also careful to provide in the express language of the necessary and proper clause that "the Congress shall have power * * * to make all laws which shall be necessary and proper for carrying into execution the * * * powers vested by this Constitution in the Government of the United States, or any department or officer thereof."

Under the constitutions of most States, and at common law, courts have the inherent powers to make such laws, in the form of rules and regulations, as may be necessary and proper to carry into execution the judicial powers of the courts. But the framers withheld from the Federal judiciary those common-law powers to make rules and regulations necessary and proper for the execution of the powers vested in the courts by the Constitution, and left the Federal judiciary powerless to implement its decisions. Such may be done constitutionally only in accordance with an act of Congress.

No act of Congress authorizes or can authorize the Federal judiciary to intermeddle with the operations of State schools or the segregation of races. No law grants Federal courts the power to nullify the decrees of God or the laws of States because they do not accord with the philosophy of Karl Marx or Karl Gunnar Myrdal.

On March 1, 1781, the Articles of Confederation were entered into by and between the 13 free States of America. The very first article of the Confederation, after the adoption of the name "The United States of America," was as follows:

"ARTICLE II. Each State retains its sovereignty, freedom, and independence, and every power, jurisdiction, and right, which is not by this Confederation expressly delegated to the United States, in Congress assembled."

Near the end of the Constitutional Convention in Philadelphia 6 years later, George Mason, of Virginia, proposed a Bill of Rights, to catalog some of the sacred rights that inhere in people, and to protect the people and the States from usurpation by Federal officials purporting to exercise the powers delegated to them by the new Constitution. That proposal was defeated by the unanimous votes of the States. Mason and Elbridge Gerry, of Massachusetts, stood alone. Mason's motion was ridiculed. The Constitution was submitted to the people of the various States with no Bill of Rights shielding the liberties of the people and the rights reserved to the States. The people began to murmur. Their fears and apprehensions were aroused. The Massachusetts Convention, when ratifying the Constitution, reported back to the Congress: "* * * as it is the opinion of this convention that certain amendments and alterations in the said Constitution would remove the fears and quiet the apprehensions of many of the good people of this Commonwealth and more effectually guard against an undue administration of the Federal Government, the convention do therefore recommend that the following alterations and provisions be introduced into the said Constitution.

"First, that it be explicitly declared that all powers not expressly delegated by the aforesaid Constitution are reserved to the several States to be by them exercised."

A respectable minority had already made the recommendation in Pennsylvania and Maryland.

Next South Carolina ratified the Constitution under a resolution that contains substantially the same language.

Next New Hampshire ratified and echoed the same fears.

Next Virginia ratified after a bitter struggle. She proposed as the first amendment to the body of the Constitution "that each State in the Union shall respectively retain every power, jurisdiction, and right which is not by this Constitution delegated to the Congress of the United States or to the departments of the Federal Government."

New York came next demanding that nondelegated powers be reserved in the people or those to whom they may have granted them in State governments.

North Carolina and Rhode Island refused to ratify the Constitution until they were assured certain amendments would be adopted. The very first amendment proposed by them, as a condition precedent to ratification, to be inserted within the body of the Constitution, was the proposal that each State should retain every power, jurisdiction, and right which was not by the Constitution delegated to the Government of the United States. Thus it was that the last seven States that ratified the Constitution, demanded that the Constitution be so amended as to shield and protect the integrity of the States against the new and untried sovereignty.

The Constitution went into effect in 1788, but the Bill of Rights was not officially adopted by the necessary 10 States until December 15, 1791. The first Senate of the United States met behind closed doors and permitted no minutes to be kept of its proceedings, but William Maclay, a Senator from Pennsylvania, kept a secret journal. He recorded on pages 292 and 293, 2 years before the adoption of the Bill of Rights, that some of the Senators were gloating over the fact that the States and the people were at last in the clutches of Federal power.

Senator King was quoted as saying:

"The opponents of the Constitution would not see the ground on which to attack it. The business is now complete. We need not care for opposition. The Constitution of the United States implied everything. It was a most admirable system * * *. The claim of any of the States to any of the powers exercised by the General Government * * * will be treated with contempt. The Supreme Court is with the General Government to decide * * * in everything * * *, for the States have neglected to secure any umpire or mode of decision in case of difference between them. Nor is there any point in the Constitution for them to rally under. They may give an opinion, but the opinion of the General Government must prevail, etc. This open point, thus unguarded, has rendered the General Government completely uncontrollable * * *."

Senator King reckoned before people were through clamoring—clamoring for a Bill of Rights. The people knew not to trust a government except it be in shackles and chains. Montesquieu had told them that the bigger a government the more dangerous to liberty it becomes.

A few months later the people of the United States put the point in the Constitution for the people and for the States to rally under. That point is the 10th amendment.

The resolution of the First Congress submitting the amendments to the State legislatures recited that it was being done because "the conventions of a number of the States, * * * expressed a desire, in order to prevent misconstruction or abuse of its powers, that further declaratory and restrictive clauses be added * * *" (and in order to establish) "public confidence in the Government."

Thus it was in order to remove the fears and quiet the apprehensions of the people about the new Government and to inhibit the abuse of its powers the 10th amendment became the living law of the land, saying: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

By virtue of that amendment the exercise of the nondelegated power by any agency or department of the Federal Government is subversion.

During recent years we have heard much about the fifth amendment and the privilege against self-incrimination. At times we have heard much about the first amendment, relating to freedom of the press, of speech, and of religion. However, we never hear that while only 4 States asked for those amendments, 7 States officially, and 2 more unofficially, demanded the 10th amendment. Massachusetts, South Carolina, and New Hampshire demanded the 10th amendment without a Bill of Rights in the belief that a Government so restrained would never be dangerous to human liberty and dignity.

The first nine amendments are an incomplete catalog of rights that inhere in people. Those rights inhered in the people before the revolution and before the Constitution. It was to shield those rights from kings and parliaments that the revolution was fought.

The first 9 amendments deal with rights. The 10th amendment deals with powers. It seizes the heavy hand of Federal power and holds it in a death grip, saying to the Congress, the President, and the Supreme Court, you may do what the Constitution says you may do, but you may do no more. Those powers that are not delegated to you are either reserved to the States, or they belong to the people.

The 1st amendment, as we have noticed, says that "Congress shall make no law respecting an establishment of religion", etc. The 2d amendment says in part: "* * * the rights of the people to keep and bear arms shall not be infringed." That amendment tells us what to do as a last resort—in case the independent judiciary fails the people. That amendment talks Anglo-Saxon. Cowardly people can't understand it. The 3d amendment likewise states something that government may not do. The 4th amendment reiterates that "the rights of the people * * * shall not be violated," etc.

The Bill of Rights, like the Constitution itself, proclaims repeatedly that only the Congress may make Federal laws. It was never dreamed by those who framed the Constitution or the Bill of Rights that a judiciary might attempt to usurp the powers of the Congress, the powers of the States, the powers of the people and the powers of God and overturn the Constitution, and make laws and brazenly cite Marxist writings as modern authority for so doing.

The Bill of Rights constitutes a cluster of little foxholes of liberty ground into the hard cold face of history by helpless men for a shield against the last of tyrants. They are a shield against arbitrary rulers, including star chamber judges, old and new. They are the result of distrust of power and distrust of men in power. They are a recognition of a truth eternal, expressed by Lord Acton: "Power corrupts, and absolute power corrupts absolutely."

If there is any provision in the Constitution of the United States forbidding the maintenance of segregation between races, where is it? If the Congress itself is given power to legislate with respect to education in the several States, where is that grant of power? If the Supreme Court of the United States is authorized by any clause of the Constitution to make laws and implement its laws by decrees, where is it? If there has ever, in the long history of civilization, been an example of the intermeddling of governments with the racial mores of a people, where and when was it?

In spite of the plain words of the Constitution, that any high-school child should understand, there are those who yet believe that the Supreme Court can make laws. In order for the Supreme Court to make laws let us see, summarize, and emphasize briefly what it must do:

1. It must nullify the very first line of article I of the Constitution that vests all of the legislative powers granted by the Constitution in the Congress.

2. It must nullify section 7 of article I which provides that Federal laws may not be made without the concurrence of the President or the concurrence of two-thirds of the Members of both Houses of Congress.

3. It must nullify section 8 of article I which confers upon the Congress the power to make all laws for carrying into execution the powers conferred upon the judiciary.

4. It must nullify the limitations placed upon the judiciary by article III of the Constitution which restricts the judiciary to cases and controversies, and limits the appellate power of the Supreme Court "to law and fact, with such exceptions, and under such regulations as the Congress shall make."

5. It must nullify the definition of the law of the land contained in article VI which is "this Constitution and the laws of the United States which shall be made in pursuance thereof; and all treaties made * * *."

6. It must nullify that part of article VI of the Constitution that requires that all of those who make or enforce laws in America, State or Federal, shall take an oath to support this Constitution; in preference to and instead of Supreme Court decisions.

7. It must nullify all of our cherished guaranties of freedom, cataloged in the Bill of Rights, because our forefathers did not have the foresight to protect those rights against laws made by the Supreme Court as well as those made by the Congress.

8. It must nullify the very last clause of the 14th amendment that vests in the Congress the exclusive power "to enforce, by appropriate legislation, the provisions" of that amendment.

On and on we could go listing the provisions of our fundamental law that must be nullified in order for a decision of the Supreme Court of the United States to constitute the law of this land.

One who insists that the decision of the Supreme Court in Brown, et al. of May 17, 1954, is the "the law of the land" either knows better or he doesn't know better. If he know better he is depraved. If he doesn't know better he is ignorant. If he is ignorant he must be taught. If he is depraved he must be shunned.

For the full life of this Republic, the Supreme Court has consistently held that there is nothing in the Constitution that forbids the States from maintaining racial tranquility in segregated but equal schools. What has occurred to change the Constitution or the laws? Nothing except a campaign extending over a quarter of a century that has resulted in the systematic exclusion of trained lawyers and trained judges from the Supreme Court bench. That has been done in order to load the bench with weak men, and to prostitute the Court so as to make it embrace the philosophy of Karl Marx, the prophet, and his minor prophets, Andrei Vishinsky, and Karl Gunnar Myrdal.

When Jesus was looking for 12 good men he found Judas. He could have found a thousand like him without looking. So may a President.

The Supreme Court is to be commended for that spark of sportsmanship and integrity that caused it to cite "modern authority" for its decision in Brown, et al. With that lead, research has at last turned up an authority that the Court followed, without citing. It is the Course of Criminal Procedure, by Andrei Vishinsky, published in Moscow. In that book Vishinsky said:

"Soviet justice is an effective organ of Soviet policy."

Further on he described the functions of the Soviet judge, saying that he "should not aim merely at judicial logic; he should always be conscious that the law is nothing other than the expression of the policy of the party; in practice, this means that the Soviet judge, in case of contradiction between the law and the general line of the party, should not hesitate to set aside the application of the law, to obey absolutely the directions of the party, which represents for him the supreme law."

That is Brown, et al. There is your government of flesh. Karl Gunnar Myrdal was just a blind and a stalking horse for Andrei Vishinsky and his philosophy of government. Thanks to "modern authority" we are stuck with a Soviet constitution and a Russian bill of rights.

For 40 years now we have been planting the dead bodies of our sons in foreign soils on every continent of the world "to make the world safe for democracy." We have succeeded in making the world safe for communism. Democracy is dying. Here in America is the last hope of man on earth to hold liberty and dignity. The hold is slipping.

The American way of life, that so few now love and so many now hate, was won by a Revolution that could never get going until our forefathers organized and began to identify, ostracize, and boycott. They desocialized every traitor to his land and race. The freedom we enjoy was won by such means. If we keep our freedom we must rise to the level of our fathers and use their methods. The good negroes are on our side. There is no race problem involved. The only color involved is white—white trash. That white trash is organized under many names. Those organizations are composed of the dedicated gravediggers of American civilization.

The dilemma we find ourselves in today is not new. History repeats itself. Around 2,000 years ago, government by law had broken down in the Roman Republic. Judaism had lost touch with God. Mankind had cast itself loose from the traditions of the past and had lost its way. Wearied by excitement the world had gone mad. Form had replaced substance. Names had replaced things. Judges had forsaken the science of law for soothsayings. What we know now as social justice had replaced legal justice. The will of the people as interpreted by judges had replaced mandates of the laws of God and man. In that dark hour of history God sent His only Son to show the way to a world that was lost. He started with simple fundamentals. He taught the hopeless people to pray to God just one simple prayer that begged deliverance from their hunger, their trespasses, their temptations, and their evil, leaving to their own pitiful wits the phrasing of prayers of things less urgently needed.

As He was gently leading mankind back to tangible truth, He was also moving to His Garden of Gethsemane, Golgotha, and the Cross. Along the way He was trailed and shadowed by sociological judges, seeking to trap Him in His words. Seeing them in the multitude and among His disciples (one of whom was a friend of the court, and a traitor to his race and to his God) He began to speak of and to them. To the multitude He said:

"The * * * Pharisees sit in Moses' seat, but do not ye after their works. * * * For they bind heavy burdens * * * and lay them on men's shoulders * * * all their works they do * * * to be seen of men: they make broad their phylacteries, and enlarge the borders of their garments * * *."

He then turned upon the sociological bloodhounds:

"But woe unto you * * * ye have taken away the key of knowledge * * * ye shut up the kingdom of heaven against men: for ye neither go in yourselves, neither suffer ye them that are entering to go in * * * ye compass sea and land to make one proselyte; and when he is made, ye make him twofold more the child of hell than yourselves * * * ye pay tithe of mint and anise and cummin and have omitted the weightier matters of the law * * * these ought ye to have done, and not to leave the other undone * * * ye blind guides, which strain at a gnat and swallow a camel * * * ye make clean the outside of the cup and of the platter but within they are full of extortion and excess * * *."

Thereupon He turned again to the helpless multitude: "Behold your house is left unto you desolate * * * ye shall not see Me henceforth. * * *"

He knew that the hour was at hand. He was in the clutches of sociological judges in a government of flesh. The judges who condemned Him trailed Him to the executive chambers of Pontius Pilate. Pilate, yielding softly to the will of the people, or to social justice, influenced by scientific thought control, asked the multitude whether it should be He to be executed. The judges, stirred up the will of the mob to cry: "Let Him be crucified."

Above the din of the mob were heard a few broken phrases as Pilate pressed the Saviour to declare whether He came to infringe the prerogatives of the tyrant Caesar, in his government of flesh "to this end was I born, and for this cause came I into the world, that I should bear witness unto the truth."

Pilate was faintly heard to close the last colloquy: "What is truth?"

Even He paid a final tribute to truth that puts our Supreme Court to shame.

Thus the Son of God who branded the races of men with the marks of their kin and kind was, himself, history's honored victim of sociological judges in a government of flesh. It was their crown He wore, and their cross He bore.

That story may be found four times told in a book that may yet be found in most American homes. That book is a bur that mysteriously rides beneath the saddles of all modern authority in the field of sociological justice and scientific thought control. Our Supreme Court has virtually banished that book from the public schools of America in the specious names of religious freedom, and liberalism, and our children are not longer taught its lessons. That holy book contains no shifting creed and cannot rest on the same shelves with unholy ones that are now modern authority.

As we in the South once more pass into our Garden of Gethsemane thence to bear our socio-judicial cross, we plead with our brothers of the North not to let their sympathy and understanding be limited by latitude.

We in the South don't intend to obey men, however exalted their seats or black their robes or hearts. We do intend to obey laws made in accordance with our constitutions. We will live as free men or die as becomes the descendants of those who died that we might live in the freedom to be different with the liberty to be let alone.

Visit From the President of Italy

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1956

Mr. MULTER. Mr. Speaker, the following editorial on President Gronchi's arrival in the United States is deserving of our colleagues' attention. It appears in the New York Times issue of February 27, 1956:

VISIT FROM A PRESIDENT

A visit from the President of Italy is diplomatically important in any circumstances and it is a pleasant opportunity to show our friendship for Italy. When the President is a dynamic and interesting character like Giovanni Gronchi, who arrives in the United States today, the visit becomes much more than a formality.

Constitutionally, the Italian President has little authority, but a forceful character like Giovanni Gronchi can give a weight and influence to the post that it does not normally have. At first, President Gronchi's espousal of the "opening to the left" frightened the uninitiated. The phrase was interpreted to mean that Signor Gronchi wanted to see a government formed that contained the left-wing Nenni Socialists who are closely linked to Italy's large Communist Party. However, Giovanni Gronchi is and always was anti-Communist. What he meant was that the Nenni Socialists must split with the Reds and then a government of the left could be formed with them.

The emphasis is always on the left, and this is what disturbs so many people. Yet, insofar as such trends can be pinned down, popular sentiment in Italy on the whole is weighted to the left. This is a genuine left, not a totalitarian Communist one. Over a period of a few years the Communists have been losing ground, although they remain the most powerful Communist Party in voting strength outside of the Iron Curtain.

The really important—and deeply satisfying—fact about postwar Italian history is that, in spite of the Communist strength, grave economic problems, high unemployment and a natural lack of experience in the ways of democracy after 22 years of fascism, Italy has become and remained a democracy. This is a great accomplishment and President Gronchi is one of the men who helped to keep Italy on the path of freedom. We do not need to agree with all his ideas or he with ours. What matters is that he believes in democratic institutions and is a friend of the United States. He will be welcomed here with true cordiality.

A Bill for the Protection of Ex-Korean Prisoners of War

EXTENSION OF REMARKS
OF

HON. THOMAS L. ASHLEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1956

Mr. ASHLEY. Mr. Speaker, today I have introduced a resolution which I hope will correct flagrant abuses by the Foreign Claims Settlement Commission in the administration of the War Claims Act of 1948, as amended, which provides for the payment of compensation to ex-prisoners of war for treatment they received in violation of the Geneva Convention of 1929.

The law voting these benefits contained a provision defining a prisoner of war as one who did not "voluntarily, knowingly, and without duress" give aid to or collaborate with the enemy. It is also necessary to keep in mind that the law requires each claimant to satisfy the Commission as to the exact number of days he received insufficient food—for which he is entitled to compensation at the rate of $1 per day—or was subject to inhumane treatment—for which he is entitled to an additional $1.50 per day.

It has been the practice of the Foreign Claims Settlement Commission, in the case of all Korean prisoners of war against whom no allegations of collaboration have ben brought, to presume that the claimants were insufficiently fed and inhumanely treated during the entire period of their captivity. Generally speaking, these claims have been paid promptly and in full.

Unfortunately, a very different situation exists with respect to the processing of claims of prisoners of war against whom derogatory information has been received by the Commission. In these cases, the Department of the Army has furnished the Commission with secret and unsubstantiated allegations relating to the activity, treatment, and attitude of certain POW's during their captivity. Upon receipt of this secret and often hearsay information against a claimant, the presumption that he received substandard food and inhumane treatment has immediately been "suspended" and the claimant has thereupon been requested to establish his eligibility by affirmative proof. In other words, the claim has been disallowed by the Foreign Claims Settlement Commission and the claimant has then had the burden of proof of establishing either that he was not a collaborator or that he, in fact, actually received substandard food and inhumane treatment during each day of his imprisonment.

Claimants who have requested a hearing after having their claim disallowed on primary examination have been furnished a summary of information which, to my knowledge, has been identical for each claimant. In each case, it reads as follows:

A. Assisted the Communist propaganda by:

1. Writing and circulating peace petitions promoting Communist causes.

2. Writing and publishing articles containing information adverse and inimical to the interest of the United States.

3. Drawing cartoons which promoted communism and reflected adversely on the United States.

4. Participating in the preparation and dissemination of front line surrender leaflets.

5. Attempting to influence prisoners of war to accept communism.

6. Participating in the publication called New Life.

7. Actively participating in a group called Yen-So-Yen (workers) whose apparent mission was to interrogate and indoctrinate newly captured prisoners of war.

8. Serving as chairman of the camp peace committee.

B. Received the following preferential treatment from the hostile forces:

1. Better medical care than the other prisoners of war.

2. Better food and better clothing.

3. Easier jobs.

C. Cultivated the friendship of and were overly friendly with the hostile forces.

D. Frequently visited the Chinese officials of the prisoner of war camp by invitation and voluntarily both by day and night.

E. Were selected and approved by the hostile forces for special jobs such as squad leader and chairman of the peace appeal committees.

These are the general charges, Mr. Speaker, which each ex-Korean prisoner of war must rebut if secret and unsubstantiated allegations against him have been received by the Commission.

Actually, however, a claimant has no way of knowing whether he must affirmatively prove that he was badly treated or whether he must prove that he was not a collaborator with the enemy—or whether he must prove both. In dealing with the issue of collaboration, the policy of the Commission is to be found in a memorandum from the general counsel to the members of the Foreign Claims Settlement Commission:

It is suggested that in the disallowance of claims under section 6 (e) of the act in which collaboration is an issue, the decision be based upon the finding that the evidence is insufficient to warrant the conclusion that the claimant, while imprisoned, was not fed or treated as provided in the Geneva Convention of July 27, 1929. No reference, expressed or implied, need be made therein to any official document or report which the Commission may have considered.

What the counsel's memorandum says is that the Commission may come to its conclusion on the basis of the issue of collaboration, and then write up its decision, in the same case, on the basis of another entirely different issue. This amazing document also contains the tacit admission that unevaluated, derogatory information, used by the Commission in reaching its decision, is then hidden from the claimant under the pretext that the information never entered the decision. In short, these hapless veterans find themselves deprived of their benefits and given a false reason, to boot.

I think you can see, Mr. Speaker, how closely this appalling procedure resembles the well known shell game. And I am sure you also see how far afield this procedure is from the accepted traditions of American justice.

The legislation which I have introduced today seeks to correct this deliberate and systematic injustice by requiring the Foreign Claims Settlement Commission to specifically inform a claimant of the reasons for disapproving his claim either in part or in full. It gives the claimant or his attorney the right to examine the evidence which is the basis of the Commission's determinations, and it prohibits the Commission from considering evidence which cannot be examined by the claimant.

Because many veterans have not been in a financial position to come to Washington to appear before the Commission, the resolution introduced today provides that hearings shall be held at a location not further from the claimant's residence than the capital city of the State in which he resides. The measure also gives each claimant the specific right to be represented by counsel, to have compulsory process to require witnesses to appear, and to cross-examine all witnesses on whose evidence the Commission has relied in denying his claim or in disapproving it in part. Evidence given by any witness on whose evidence the Commission has so relied, and who is not available for cross-examination by the claimant, must be disregarded by the Commission in reaching its decision.

In order that past abuses may be corrected, Mr. Speaker, the legislation which I have been discussing allows claimants to reapply to the Commisison for redetermination of their claims if, in the past, the claims were denied or approved

for less than the full allowable amount, on the direct or indirect ground that the claimant collaborated with any hostile force or enemy of the United States.

Finally, the measure establishes the right of claimants, against whom adverse decisions have been handed down by the Commission, to institute proceedings for the review of such decision by filing a written petition in our Federal district courts.

Mr. Speaker, I respectfully urge the careful and immediate attention of each Member of this House to the legislation which I have introduced today. The time has come to cut through the maze of fraud and hypocrisy which surrounds the proceedings of the Foreign Claims Settlement Commission. In a letter to me dated January 10, 1956, Mr. Whitney Gillilland, Chairman of the Commission, piously declared that "in the administration of this type of legislation there is no adversary aspect. No one prefers charges or makes accusations. The legislation is of a beneficial nature and the determinations of the Commission are based solely on whether or not a claimant factually meets the eligibility requirements." I submit, Mr. Speaker, that a claimant upon whom has been placed the burden of proof to establish that he did not collaborate with an enemy of the United States finds the proceedings to be adversary in every aspect. And I find it more than difficult to understand how Mr. Gillilland can say that "no one prefers charges or makes accusations" when he himself has signed hundreds upon hundreds of letters containing the summary of information against claimants relating directly to the issue of collaboration.

Fair Play Will Help Keep the Peace

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. MULTER. Mr. Speaker, I wish to call to the attention of our colleagues the following statement issued on February 17, 1956, by Rabbi Philip S. Bernstein, of Rochester, N. Y., chairman of the American Zionist Committee for Public Affairs:

The disclosure that our Government was on the verge of shipping tanks to Saudi Arabia, until halted by an exposé, is new and disheartening evidence of the inconsistency and unfairness of our Government's current practices in the Near East.

We have properly condemned the Communists for shipping deadly MIG fighter planes and IL bombers to Egypt. How then can our Government simultaneously supply arms to Egypt's major ally in the region, Saudi Arabia?

In recent months, Saudi Arabia has been a hornets' nest of Communist intrigue against both the United States and Great Britain, stirring up Jordan and other Arab States by bribe and threat to oppose western efforts to strengthen the region against Communist imperialism.

The Department of State cannot justify withholding arms from Israel on the ground that we are opposed to an arms race if we send arms to a despotic dictator who threatened on January 9, 1953, to sacrifice 10 million Arab lives in the attempt to destroy Israel.

Other Arab countries in the Near East are also getting arms from the West. During this last year the United States made available over $10 million worth of heavy tanks and other weapons to Iraq, whose present Prime Minister has stated: "Whoever would decide to make peace with the Israeli enemy would thereby sign the death warrant for the whole Arab nation."

British weapons continue to pour into Jordan which also refuses to make peace with Israel.

Thus while the hostile neighbors of Israel form an armed ring on her borders, the one democracy in the Near East is being isolated and denied arms by our own great democracy.

Have we ever before refused to sell arms to a democratic nation exposed to destruction by Communist weapons on her frontiers?

To strengthen the Egyptian-Saudi Arabian alliance at this time is to put teeth into Nasser's threat, uttered as recently as 1 month ago today, that the new Egyptian constitution was the beginning of an effort to establish Arab hegemony over Palestine.

Peace in the Near East must continue to be our major objective. But peace will not be attained, the threat of war in the Near East will mount and communism will grow stronger if we permit the Arab countries to achieve military superiority over the democratic country whose destruction they seek.

In America's own best interest and consistent with the American tradition of fair play, our Government should grant Israel's request for arms with which to deter aggression from her trigger-happy neighbors and to defend herself and the democratic way of life that she represents. Failure to take such action, accompanied by the disclosure of the planned shipment of tanks to Saudi Arabia, indicts our professions of international morality, exposes democracy to new Communist attacks and impairs the high prestige of our country as the leader of the Free World.

The Case for Dental Research

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. MINSHALL. Mr. Speaker, under leave to extend my remarks, I wish to call attention to the following resolution adopted by the council of the Cleveland Dental Society which concisely cites the case for an increased appropriation for dental research:

Whereas the physical, social, and economic toll taken by dental disease is constantly increasing and affecting most of the Nation's population, child and adult; and

Whereas great advances in preventing disease come as a result of research, and millions of people have already been benefited by dental research; and

Whereas the American dental bill which amounts to nearly a billion and a half dollars per year may be reduced by a few million dollars spent for research; and

Whereas the American dental bill is approximately 16 percent of the total medical bill while only 1.3 percent[1] of the funds allocated for research is devoted to dental disease; and

Whereas 40 percent of the men entering military service required immediate dental treatment, and today our troops are losing collectively over a million teeth a year with 5 percent requiring replacement to provide even the minimum for the chewing of food; the cost of this dental care to the taxpayer at the most conservative civilian rates would exceed $80 million a year and even a very modest progress would pay for the dental research many times over in the reduction of governmental dental costs; and

Whereas the President of the United States in his annual message this year complimented dentists as being a part of the Nation's health team and mentioned the need for more dental research; and

Whereas the dental profession has contributed over $220,000 annually for dental research: Therefore be it

Resolved, That our representatives in Congress be urged to exert every effort to increase the appropriation for the United States Public Health Service dental activities for the 1957 fiscal year from $2,971,000 to $6,026,000, this increase to be used for the dental-research program of the National Institute of Dental Research; and be it further

Resolved, That our representatives in Congress be urged to request an appropriation of funds for the construction of the National Institute of Dental Research Building.

DWIGHT R. KINSLEY, D. D. S.,
President.

[1] Research grants to institutes for research (1.3 percent of total):

Institute for Cancer Research	$6,700,000
Institute for Heart Research	6,400,000
Institute for Mental Health	2,587,000
Institute for Arthritis Research	3,152,000
Institute for Dental Research	421,000

Fights To Stay on To Fight

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. DINGELL. Mr. Speaker, I rise today to insert into the CONGRESSIONAL RECORD an excerpt from the Detroit Times by Mr. Art Hinkley, which announces the retirement of a great fighter for the common man. The name of that man is James H. Lee, better known as Jimmy Lee, who has consistently fought the avarice and attempts to secure more than a fair rate of return by the greedy people who sought to unfairly mulct the gas consumers, small and large, in our city of Detroit and in other consuming areas throughout the country, of a larger and larger percentage of their incomes.

Friend and foe alike respect and admire his courage and concern for the common man. It is to his eternal credit that it is rightfully said that it was he who established the principle that the Federal Government can regulate the cost of natural gas at the wellhead.

It is my hope that the city of Detroit will recognize his rare courage and ability and will be able to retain him, despite charter provisions to the contrary, that he may continue his unique contributions to the welfare of his fellow men.

The above-mentioned excerpt follows:

FIGHTS TO STAY ON TO FIGHT

(By Art Hinkley)

Jim Lee, the little, gray-haired city attorney who delights in taking on public utility giants, is facing an even tougher opponent—his next birthday.

When March 27 arrives Lee will be 69 years old, and the city charter sets that time as the mandatory retirement date.

For the last quarter century Lee has been fighting public utilities with the zeal of a dedicated missionary. He is in the midst of several battles and would like very much to stay on for the finish.

WOULD KEEP HIM ON

Council President Miriani and several other councilmen hope to make an arrangement whereby Lee would continue to serve the city on a contract basis. Miriani plans to enlist the aid of Mayor Cobo in the effort.

Paul T. Dwyer, corporation counsel and Lee's boss, anticipated his aid's retirement some time ago and named another staff member, Robert Reese, to take over the utilities assignment.

Reese, 41, has been in tte corporation counsel's office 7 years and has handled work for a wide variety of city departments.

Lee isn't as interested in his $15,175 salary as he is in winning his current battles. Among them are: distribution of a $36 million refund to customers of Panhandle Pipeline Co.; completion of the American Louisiana pipeline which will bring this area 200 million more cubic feet of gas, and a court action over a rate-fixing formula to be applied in the gas fields.

COVERS COUNTRY

Since about 1930 Lee has traveled throughout the country appearing at hearings and court actions in behalf of the public. He has argued repeatedly before the Federal Communications, Securities and Exchange, and Power Commission, Michigan's public service commission, and State and Federal courts. He commented:

"Usually Detroit was the only city represented in these battles. Occasionally another city would intervene, but usually Detroit was fighting the public battle alone."

Lee's efforts were successful in many cases and he was instrumental in obtaining refunds of more than $100 million for utility customers.

GETS THEIR RESPECT

The determined attorney won the respect of his opponents and he is quick to praise the utilities when he thinks they have done the right thing.

Lee is proud his opponents never have even tried to buy him off with job offers. He said:

"So help me, I've never had an offer from any of the utilities."

James H. Lee was a young Irish lawyer when he ran for the State senate in 1911 as a business promotion. He remembers:

"Teddy Roosevelt was in Africa. Taft was in the White House, and the Democrats were in the ashcan. I needed law business and decided to be a candidate for advertising purposes. It only cost $4 to file.

"No one was more surprised than I was when I got elected, 1 of 2 Democrats in the senate. Next year Mayor William B. Thompson appointed me to the city's legal staff."

In 1930 Lee handled the Woodward widening condemnation case—170 lawsuits in one—and he obtained a verdict of less than the citys' experts had estimated.

In 1910 Lee was one of the organizers of the Michigan Municipal League. He served as president in 1920 and a trustee since that time. Last year he was made the first life member of the group.

AN 8-YEAR JOB

For 8 years he has been chairman of the committee on telephone, gas, and electric rates of the National Institute of Municipal Affairs.

Mr. and Mrs. Lee, who live at 149 Webb, became acquainted when he was a senator and she a legislative committee clerk. They have a daughter and a son, James H. Lee, Jr., who is a successful radio and television actor.

The Past, the Present, the Future

EXTENSION OF REMARKS

OF

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. HOFFMAN of Michigan. Mr. Speaker, recently a political science instructor asserted that for 20 years your Representative had been carrying on a campaign against the 20th century, believing that time ended with the 19th century. He said the voters should "unite against the bad habit of Hoffmanism in the Fourth District." The gentleman speaks in riddles.

Everyone knows that time marches on. Sensible people learn from past experience, think of the future, not just of today. We need not build an ark on Mount Ararat. Sound thinking people, aware of today's realities, know that unless we use more common sense, return and adhere to certain age-old fundamental principles, our people will be drowned by the floodwaters of communism, public debt, or overwhelming taxation, or by all three.

When Adam and Eve were banished from the Garden of Eden because they associated with a snake, it became evident that if they were to live, it would be necessary for them to hustle for themselves.

Today, some folks—a few with their heads in the clouds—think we can get food, clothing, homes, and most things we want by legislation. In 304 a Roman emperor, evidently of the same mind as the instructor, sought to solve the people's ills by price-fixing laws and government control of the activities of the people. In the centuries gone by, several other nations have attempted through the enactment of laws, to create prosperity, contentment, and happiness. All failed—legislation does not satisfy hunger.

As long as the earth goes 'round, as long as we have day and night, as the seasons follow each other, there is no reason to believe that any individual or group of individuals, no matter how advanced their learning, how fine sounding their theories, will be able either to change or to overcome nature's laws which have been in existence not only in the 20th century, but since the dawn of civilization.

HOFFMANISM

Several years ago a publication, desiring to discredit me, sent an astute reporter into the district to write me down. She came up with the statement "the voice you hear in Washington is not the voice of CLARE HOFFMAN, but the voice of the people of the District." Making audible in Washington the voice of the people of the District is a worthwhile public service.

Unless I am completely mistaken, the people of the fourth district are thoroughly convinced that if they are to reap, they must sow; that if they are to harvest, they must plant, prune, and spray. That, if they are to live in comfort, they must work, be thrifty, conserve and wisely use their resources. That, if they are to live in peace, they must be tolerant of their neighbor's rights. That, if the welfare of the individual and of the Nation is to continue, recognition of physical facts, of nature's laws and moods, is necessary. That adherence to the Ten Commandments and the Golden Rule, even though they be old—not a 20th century creation—is in the end the best policy for all.

The Government—without money, except as we furnish it—cannot itself take care of us. It can only write laws to protect us from injustice.

In formulating the policies which will insure our present and future welfare and security, it will be foolish to disregard the experiences and the lessons of the past.

If that be Hoffmanism, let those who think the principles of the Constitution, the policies which have given us so much, are shopworn, old fashioned, make the most of it.

The Integration Issue

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1956

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following comment on the school-aid question which appears in the February 23, 1956, issue of the New York Journal-American:

SCHOOL CHIEFS BAR AID RIDER—FEAR AMENDMENT MIGHT KILL BILL

ATLANTIC CITY, February 23.—The American Association of School Administrators (AASA) has gone on record against any desegregation amendment to Federal school aid on the grounds such a clause might lead to defeat of the legislation.

The association's annual convention, which winds up today, took its stand on the school-aid question in resolutions adopted without objection yesterday.

In another resolution dealing with integration, the 18,000 school officials urged "that all citizens approach this matter with the spirit of fair play and good will."

They expressed the conviction * * * that all problems of integration in our schools are capable of solution at the State and local levels.

Armory Construction in Louisiana

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks, I present two exhaustive tables showing the status of National Guard construction in Louisiana. The construction program is is being handled under the terms of Public Law No. 783, which I sponsored and which I helped to engineer through Congress. Under the original bill, the Congress provided $250 million to be spent for Reserve construction within a 5-year period, and when this sum was exhausted an additional $250 million was authorized to be spent within 3 years.

The charts set forth herein cover only the National Guard projects located in Louisiana, but these projects provide for joint use with other Reserve requirements. The vastness of the program generally is indicated by the number of projects already handled in Louisiana, totaling some $3,369,818.39, since the enactment of Public Law 783.

The second chart covers the status of the National Guard armory-construction program for fiscal years 1956 and 1957. The exact costs of these programs, of course, are not yet known, as plans in many cases have not been completed, the purchase of the land has not been effected, and the engineering data has not been assembled. The 1956 program, together with the 1957 program, however, constitute an important phase of our total program of providing Reserve facilities for use in drills and assemblies.

When the second $250 million is expended within the 3-year period, we should then have completed one-half of our Reserve building program for the United States. I am satisfied that each State can present a very fine construction program such as I take pleasure in presenting herewith.

Armory construction program (Public Law 783)

Location	Cost of original building before Public Law 783	Cost of construction under Public Law 783		Estimated land values	Engineering fees	Other costs	Total values	Percentages	
		State funds	Federal funds					State	Federal
1. Donaldsonville		$35,026.52	$105,079.56	$11,000	$8,406.36	$5,600	$165,112.44	36.36	63.64
2. Jeanerette		35,345.13	96,142.51	3,000	5,916.94	6,350	146,754.58	34.49	65.51

What's in the Mail Today?

EXTENSION OF REMARKS
OF
HON. JOSEPH F. HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. HOLT. Mr. Speaker, I should like to call to the attention of my colleagues the following articles from the Watertown (N. Y.) Times and the Westerly (R. I.) Sun:

[From the Watertown (N. Y.) Times of January 31, 1956]

CONVINCING TEST

Congress is studying a $4 billion proposition known as the upper Colorado River project. A key unit of this program is the $421 million Glen Canyon Dam and Reservoir, designed to produce power revenues to pay off some 30 other units of the project that cannot pay for themselves. In other words, the dam-reservoir segment alone is considered the cash register of the entire operation.

But rough sledding is ahead for the program in Washington if Congressman CRAIG HOSMER, California, Republican, has his way. It's because he has made a fascinating and highly important discovery.

Independent geologists advised Congressman HOSMER that the water would swiftly disintegrate the immense cliffs which form more than 50 miles of the long, narrow walls of the reservoir because they are composed of a soft rock—known as Chinle shale.

The Congressman wanted to have absolute proof. In company with the geologists, he made a helicopter expedition to remote sections of the reservoir site in northern Arizona and southern Utah. Several hundred pounds of the Chinle shale were gathered and flown out for laboratory tests.

Using these samples, Congressman HOSMER demonstrated the rapidity with which it turns to pure mud when placed in an ash tray containing a small amount of water.

Congressman HOSMER was furious with this discovery. "If this is permitted to happen," he said, "the finances of the entire upper Colorado River project would collapse with it. The Nation's taxpayers would be left with a billion-dollar mud puddle. Congress should withhold any consideration of legislation pending a full and complete geological survey and report."

And to add weight to his argument, the California Congressman has sent out small boxes containing samples of the Chinle shale. They aren't sent under his frank privilege, either, but bear 9 cents in postage.

One such box arrived at the Times office Monday. We followed Congressman HOSMER'S instructions, placing the small handful of stones in an ash tray on the editor's desk. A notation, along with other literature and photographic evidence accompanying the box of shale, indicated the stones would be mere mud in just 5 minutes.

A stopwatch was plaecd on the experiment. In just 4 minutes—1 minute less than the documented claim—the ashtray was full of mud. The stones had disappeared. Maybe this new record of 4 minutes could be attributed to the fact Black River was used here.

Nevertheless, Congressman HOSMER has a very convincing argument. And he has employed a unique and impressive manner to demonstrate it.

[From the Westerly (R. I.) Sun of February 2, 1956]

WHAT'S IN THE MAIL TODAY?

The mailbag at the Westerly Sun yields its share of surprises every day. Possibly a newspaper gets more odd types of mail than any other establishment; since everyone wants a certain amount of publicity within the news columns.

This past weekend a small cardboard box arrived at the Sun from Representative CRAIG HOSMER, a Member of Congress from California. The box contained a handful of small stones called Chinle shale and certification from a geologist that the stones were taken from the Colorado and San Juan Rivers at the site of the proposed Glen Canyon Dam reservoir.

This project is a $421 million power dam and reservoir, a part of the Federal upper Colorado River project, now before Congress.

A photo that arrived in the same mail showed Representative HOSMER pouring water over a handful of similar rocks. In 5 minutes time they had disintegrated into mud.

The writer became curious and tried the same experiment, using an aspirin tablet in the same water for comparison. Strangely enough the stones, which were hard enough to scratch a fingernail, disintegrated faster than the aspirin tablet.

Representative HOSMER'S question is this: Will the taxpayers be building a good dam or a mud puddle costing $4 billion, the estimated overall cost of the project?

And quite a novel manner in which to get a point across to the reading public, too.

World Trade Unions a Potent Force To Resist the Spread of Communism

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. TOLLEFSON. Mr. Speaker, American organized labor has become a potent force in the effort of the democracies of the world to resist the spread of communism. Stories coming out of French North Africa indicate that American labor's activity may well be an important new factor not only in speeding the independence of those Arab-speaking lands but in preventing communism from gaining a foothold there.

In Algeria, the largest of France's three north African territories, there is being created a new Moslem trades union. It is patterned after similar unions in Morocco and Tunisia, which have played a major part in winning the greater independence recently granted those areas by the French Government.

American labor's connection with this effective effort in French North Africa, which is expected to bring about cohesion among the natives in their move toward independence, began with the strong campaign waged over the past 6 years by Irving Brown, head of the European office of the A. F. of L. It was followed by the all-out support of the anti-Communist International Confederation of Free Trade Unions—ICFTU—with headquarters in Brussels, which originally encouraged the formation of the Tunisian and Moroccan trade unions in order to prevent those countries from falling under Communist influence. The new Algerian union will, as have the other two states, join the ICFTU.

Concerted effort is now being made toward the formation of an overall organization, comprising these three North African unions. This would mean that the political North African Federation, made up of Tunisia, Algeria, and Morocco as independent states, had already been formed to all intents and purposes at the labor level.

Hence, France can no longer deal with isolated Algerian populations. These native unions, aided by their common membership in ICFTU and their common cause in seeking independence from France, are merging across the frontiers of the three states. Any effort that France should make now to seek to carry out a policy in Algeria, which would not meet with the approval of Tunisia and Morocco, would find resistance of the massed workers of all three states.

The new Union des Syndicats des Travailleurs Algerians (USTA) already is organizing port and dock workers, transport workers and hospital personnel. Plans are being made to wage a campaign to recruit agricultural workers.

USTA will make demands for improvement of the lowly lot of workers in Algeria and "equal pay with Europeans." It will, it is said, eventually move into the political field. Spokesman for the union, Ahmed Afri, said recently in Paris:

We shall not limit ourselves strictly to economic problems. We feel we must take our place in the fight for the defense of democratic liberties and the rights of the Algerian people to evolve their own status in accordance with both the charter of the U. N. and the statutes of the ICFTU in which we asked membership.

Mr. Speaker, this only serves to emphasize again the constructive, farseeing planning and effort that American organized labor is making, to do its full part as a group of responsible, intelligent persons, in helping to keep the world free of Communist domination.

The Federal Highway Program

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. MULTER. Mr. Speaker, the following editorial from the New York Journal-American for February 23, 1956, on the President's highway program, is deserving of the attention of our colleagues:

BAD FOR ROADS

President Eisenhower's highway program in Washington is suffering today from foot-dragging and sabotage from members of his own Cabinet.

Whether accidentally or by design, the performance of Secretary of the Treasury Humphrey and Secretary of Commerce Weeks as witnesses before the House Ways and Means Committee definitely lessened the chances of passage of a highway bill that will carry out the President's program.

The position taken by Humphrey perhaps can be rationalized to be that simply of a treasurer desiring to balance his books whether any roads get built or not.

The position of Secretary Weeks was just plain baffling.

The committee heard Weeks because he has supervision of the United States Bureau of Public Roads.

Weeks read a long, prepared statement praising those sections of the highway bill with which the committee has no responsibility and very little concern.

He was then questioned on the tax features of the bill, which are totally the concern of the committee and presumably the reason for Weeks' appearance.

The Secretary had no advice and no counsel.

He was unable to answer questions that almost everybody in the room, including the spectators, could have answered readily.

NEGATIVE ATTITUDES

Not only did he not know the answers, he refused to let two officials of the Bureau of Public Roads give the answers themselves.

It was more than sheer ignorance.

It was obvious to everyone present that Weeks was not going to help the Democrats write a tax bill to finance the Eisenhower highway program.

Is the Eisenhower program is voted down in the House because of lack of Republican support, the blame can be traced directly to the attitude shown by Humphrey and Weeks.

They were negative witnesses.

Apparently the President will have to state his position again.

He will have to state it bluntly and specifically so that no one will confuse his position with that taken by his two Cabinet members.

He has said already that he will support a highway bill financed by higher taxes, and in saying so he attempted to make the bill bipartisan.

At least that is the way everybody but Humphrey and Weeks saw it.

Their actions have served only to confuse those Republicans who will have to vote on the bill.

They are wondering which administration position is the official one.

The Weeks' performance looked particularly bad because he was preceded as a witness by a Republican who intelligently and enthusiastically supported the highway bill and its tax schedule.

He was Charles P. Taft, Mayor of Cincinnati and a brother of the late United States Senator Robert Taft.

Taft disagreed with previous testimony given by Humphrey and certainly will disagree with the position taken by Weeks.

The facts are that a Republican Ohio mayor did more to advance the Eisenhower highway program, for which he has no responsibility, than the two responsible Cabinet officers put together.

The New York Journal-American and the other Hearst newspapers regard it as of vital importance that the President again make his position clear and undo the damage done to a project in which he has a deep personal interest.

Milk for Health in Greater New York

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. ANFUSO. Mr. Speaker, as a Member of Congress from the State of New York and as a member of the important Committee on Agriculture of this House, I am very much interested in the problems facing the New York dairymen.

Consequently I have followed the progress of the National Dairy Council's program for greater New York with deep interest. The Dairy Council program is working through health and education leaders and through the press, radio, and television to increase the consumption of milk in the greater New York area. The program represents an important investment on the part of more than 37,000 farmers in the New York milkshed, most of whom are in New York State.

It is my understanding that as a result of the activities of the National Dairy Council the consumption of milk during the past year has increased in New York. This should have a salutary effect on both farmers and consumers. The extension of this program should in time help to reduce the price of milk, and for that reason I am greatly in favor of it.

The National Dairy Council was organized in 1915 to serve the dairy farmer and the dairy industry. Several Dairy Council units operate on a statewide basis. Among its activities are a broad public-relations program of nutrition education, the preparation of informational material, and the sponsorship of basic research on the relationship of dairy products to good nutrition. The council operates a special greater New York program whose activities are described in the annual report for 1955, which has just been published.

Mr. Speaker, under leave to extend my remarks, I wish to insert this report into the RECORD and commend it to the attention of all my colleagues and others throughout the country interested in this program. It reads as follows:

THE GREATER NEW YORK PROGRAM OF THE NATIONAL DAIRY COUNCIL

The Greater New York program of the National Dairy Council conducts a program of nutrition education, and promotion publicity on behalf of the dairy farmers who supply milk to New York City. Program activities cover the five boroughs: Manhattan, Brooklyn, Bronx, Queens, and Richmond. The program receives its support through Milk for Health, Inc., from more than 37,000 dairy farmers in this milkshed.

It is a recognized fact that a knowledge of milk's importance to good health results in increased milk consumption.

Dairy council educational and research publications which meet the exacting requirements of local leaders in the fields of education and health carry the nutritional importance of milk as a food and beverage to mothers, preschool children, schoolchildren and adults of all ages. Dairy council materials are provided in quantity only on request, and care is taken to see that they are used effectively. Thus the facts about milk and good nutrition reach a very large percentage of New York City's 8 million people living in an area of 320 square miles.

Through newspapers, radio, and television, wide and effective use of this program's recipes, food photographs and other releases promoted milk as a beverage and as an ingredient in a variety of cooked foods. In addition to working for increased milk consumption, the Greater New York program's activities bring New Yorkers a better understanding of the dairy industry, of the local milkshed and of the importance of the dairy farmer.

Regular reports keep producers informed of Greater New York program activities and accomplishments. The Skyline Reporter, issued monthly, goes to all dairy cooperatives, milk plants, county agents and other agricultural leaders in the milkshed. Special reports are sent twice a month to all county agents in the area. Radio stations, farm papers and cooperative publications publicize the activities of this program. The quarterly report issued by Milk for Health, Inc., carries timely information to all supporting farmers.

Since March 1, 1955 the office of this program has been at 219 East 44th Street. The facilities are more adequate and make possible more efficient operation at lower cost.

THE THIRD YEAR

Nineteen hundred and fifty-five marked the program's third full year of operation. This report presents highlights of the year with some comparisons with 1954 and 1953. It was a year of progress and accomplishments.

NUTRITION EDUCATION

One of the basic tasks in the development of this dairy council program was that of establishing working relations with educational and health leaders. This was a twofold task of explaining the program and securing the acceptance and use of dairy council services and materials. Working within a geographical area of the city, each nutrition consultant served the schools and educational leaders, the health agencies, and professional leaders.

WORKING THROUGH EDUCATIONAL LEADERS

In Greater New York there are four types of schools: Public, Catholic parochial, Jewish parochial, and independent private. There is a total of over 1,500 schools with more than 1,200,000 students.

The dairy council program chain of influence stretches from key administrative officials to principals, teachers, children, and families. Members of the program's nutrition service visited the key officials and their staffs. Hundreds of conferences were held with other education specialists, including curriculum assistants and consultants in reading, health education, and visual education. These key people played an important part in explaining and encouraging the use of dairy council materials in the schools under their supervision. Through meetings held with their teachers, plans were formulated for the use of dairy council booklets, leaflets, and other materials in the school curricula. In addition, many counselors, staff coordinators, and specialists in teaching handicapped students and non-English-speaking children were informed periodically of the variety and availability of authentic dairy council materials. These conferences created many partners in the work to improve the food habits of the children, and, of course, increase their consumption of dairy products.

This program contributed to the success of the school lunch and special school milk programs. In addition to dairy council leaflets and posters, a special leaflet was provided which explained the special milk program to pupils and parents and encouraged children to participate. Approximately 1,150,000 copies of these were placed in the hands of schoolchildren through the cooperation of school officials and teachers.

This dairy council program has been accepted in practically all schools in the city. More than 90 percent of the schools in the five boroughs have requested a quantity of at least one dairy council booklet and nearly all have asked for enough copies to supply the students in many classes.

WORKING THROUGH HEALTH LEADERS

In Greater New York there are more than 17,000 physicians and surgeons, over 8,000 dentists and at least 21,000 other health leaders such as nurses, nutritionists, dietitions, and health educators.

The program served and worked through these professional health leaders who, in turn, reached families and individuals in all parts of the city and thus favorably influenced nutritional practices and the consumption of milk.

In each of New York City's 30 health districts, health department staff made effective use of dairy council leaflets, booklets, posters, exhibits and other educational materials. Staff members explained the program's services and educational materials to department of health nutritionists who were the focal point for reaching health leaders. Like

a pebble dropped in water, the beneficial effects of these conferences spread through each health district, with its doctors, nurses, dentists, dental hygienists and health educators to the entire community.

The program also worked through the welfare department and the many privately financed health organizations, including the Red Cross, Tuberculosis and Health Association, visiting nurse organizations and hospitals, and through physicians, dentists, nurses and dietitians.

Sample leaflets or booklets were mailed to professional leaders to inform them of the publications available upon request. More than 7,300 general practitioners were reached by direct mail. Doctors specializing in the various fields of medicine were served in keeping with their particular special practice. For example, child specialists were offered such publications as Feeding Little Folks, while those engaged in the field of obstetrics and gynecology were offered Before Baby Comes and After Baby Comes.

About 8,000 dentists were offered dairy council materials with over 2,000 requesting copies for use with their patients. The dentists provided a very important channel for getting information about milk and dairy products into the hands of parents and children. Special attention was given by working through dentists in connection with the annual Children's Dental Health Week in February.

Nutrition Week with its theme "mealtime is family time" served to reemphasize the importance of good nutrition to good health. It was truly a citywide undertaking with its beneficial effects spreading over many months. The programs' nutrition service director served as chairman for the second year and all staff members played an active part in the success of the week. The program provided more than 212,000 educational booklets and leaflets to meet the requests of health and educational leaders. National Dairy Council films were shown by many groups and dairy council exhibits were used in 17 places including hospitals, libraries, banks, and health centers.

This program has become recognized as a community resource for professional services and authentic materials. The dairy council's accomplished purpose was to increase health and well-being through understanding the importance of milk and other dairy foods in the diet.

NDC RESEARCH PUBLICATIONS

Two research periodicals published by National Dairy Council were sent regularly to selected professional and educational people serving the greater New York area. About 20,650 received each issue of Dairy Council Digests and 5,750 received Nutrition News.

The Dairy Council Digests provided interpretative reviews of recent scientific research which related particularly to the importance of dairy products in good nutrition. Issued bimonthly, they reached general practitioners as well as professional groups associated with medical and health organizations. The publication was also sent to selected department heads and staffs at colleges and universities.

Nutrition News, issued four times a year, highlights nutrition research and presents timely articles on applied nutrition. It was provided to leaders in the field of education including school principals, educational consultants, home economics teachers and school-lunch managers. It also was sent to health educators, dental hygienists, and public-health nurses.

Direct evidence shows that these research publications were well received and met a great need.

MOTION PICTURES

Motion pictures were another tool which the program placed in the hands of health and educational leaders. In 1955 this program distributed four sound and color films which met the needs and interests of specific audiences and age groups.

Uncle Jim's Dairy Farm was used with primary and lower intermediate grades in the study of dairying and farm life and often supplemented its companion booklet. Whenever You Eat was used with teen-agers in junior and senior high schools in teaching better food habits. It's All in Knowing How was shown to senior high school students, young adults and parents with Weight Reduction Through Diet being used with groups of college age or older. The latter films were used in many areas, such as college nutrition and health education classes, hospital clinics, nursing schools, industrial health programs, and by nutritionists and other public health workers in varied community programs. For example, one nutritionist used these dairy council films as part of hers talks to service clubs, teen-age groups, women's clubs, weight control classes and many others.

Although prints of the films were made available through a film service, most of the films were scheduled and maintained by the health agencies and school systems. After receiving approval from the Board of Education, 52 prints of Uncle Jim's Dairy Farm were placed with its public schools, and district film libraries. Prints of the other three films have been placed after approval was secured, with such agencies as the health education service, New York Tuberculosis and Health community nutrition service, Queens Tuberculosis and Health and the film library of the New York City Department of Health. Special leaflets were prepared and distributed to schools, colleges, hospitals, and other health agencies to acquaint potential users with these educational films.

Greatest use of the motion pictures was made by professional workers as a part of planned programs for discussion-size groups. The use of films in this way intensified their effectiveness in furthering this dairy council program.

EXHIBITS

The major purpose of exhibits was to complement the program's services and publications and to further emphasize the place of milk in good diet.

The types and sizes of exhibits range from that of a model cow 14 inches high to those typical of conventions and expositions. The model cows, with their bells, green grass and messages of greeting were popular with the elementary school pupils and their teachers. Models represent Holstein, Jersey, and Guernsey breeds were accompanied by color pictures showing the 5 principal breeds of dairy cows. In schools they provided a focal point for teaching such subjects as nutrition, food production and dairying. Although the "herd" was increased from 15 to 45 cows in mid 1955, demand made advance scheduling essential. Each teacher was allowed to retain the model cow for not over 2 weeks.

This year, for the first time, the program maintained an exhibit at the Greater New York dental meeting held early in December. This was by far the most important dental meeting of the year in this part of the country. Hundreds of local dentists visited the dairy council booth, because better acquainted with the dairy council program and registered their requests for copies of educational materials displayed at the booth. Dentists were enthusiastic with their praise of dairy council cooperation and materials.

Several table-top exhibits and shadow boxes were used to illustrate the importance of milk as a food and to emphasize good nutrition.

In addition to the dental meeting, large exhibits were used in connection with Children's Dental Health Week and Nutrition Week.

Table-top exhibits were increased from 15 to 21 and were used at health center clinics, hospitals, libraries, bank windows, professional meetings and community programs.

A model dairy farm was featured on several television shows to promote milk consumption and create a better understanding of the important job of the dairy farmer.

For the second consecutive year, a large exhibit at the New York State Fair portrayed various activities of this program. In 1955, Milk for Health, American Dairy Association of New York, the Dairy Council units in New York State and this program jointly presented a large—40-foot long—exhibit directed to the dairy farmer.

PROMOTION AND PUBLICITY

In New York City there are 10 major newspapers, 7 television stations, and 17 radio stations. In addition there are more than 93 smaller daily papers which serve one or more sections of the city. Some are printed in Hebrew, Spanish, German, French, or other foreign languages. There are also several newspapers published by religious organizations. House organs and weeklies provide hundreds of additional outlets for promotion and publicity on milk.

Recognizing that food-page readers are second only in number to readers of front-page news and weather forecasts, the program continued to take advantage of food-page popularity to promote milk consumption. It provided seasonally appropriate editorial materials in checking recipes and attractive photographs to the newspapers in New York City.

During the year, nearly 100 new recipes for beverages and cooked foods were developed, tested, and distributed for use by newspapers. Each recipe called for 1 pint or more of milk, and in most instances was accompanied by an eye-appealing photograph.

At least 243 newspaper stories resulted from this program's milk-promoting publicity in 1955. Records show stories resulted in more than 33,000 lines of space. Frequently the articles were in Jewish, Spanish, Italian, and German newspapers. A specially prepared series of daily Lenten menus calling for a wide variety of dairy dishes and milk beverages were provided to and published by a large Catholic newspaper. In one instance a Jewish newspaper made liberal use of this program's milk-promoting recipes and photographs in their new cookbook.

As a result of this program's activities newspapers carried straight news items and editorials on milk, the dairy industry of the New York milkshed and the importance of the dairy farmer.

House organs which are publications prepared by business organizations for their own employees were provided with similar editorial materials. The publications have gone into thousands of homes of employees of an insurance company, clothing workers' union, the telephone company, and a parcel-delivery company.

Similarly a wide range of services to radio and television resulted in more than 50 broadcasts which urged increased milk consumption and brought facts about dairy farming in the New York milkshed to millions of city dwellers. Live cows were used on 4 TV shows, 1 of which originated at a nearby farm.

A model of a dairy farm was used on eight television programs. Many leading broadcasters used the program's publicity materials throughout the year.

Special promotional activities during Dairy Month included a dairy farmer who demonstrated milking to some 200 city children many of whom had never seen a cow, special radio and television programs, recipes and dairy stories in the newspapers, and a vending machine which dispensed free milk to pedestrians in the center of busy Times Square. Dairy product menus were developed by hotels and restaurants, nearly 1,500 United States mail trucks in Greater New York carried Dairy Month posters on 2 sides and food stores displayed more

than 2,000 posters as a result of the program's milk promotion activities.

KEEPING PRODUCERS INFORMED

It is essential that the 37,000 dairy farmers who support this program through Milk for Helath, Inc., be kept informed about its activities to increase milk consumption.

When a county agent is informed on matters of importance to the farmers he serves, then those farmers are better informed. For this reason, twice each month a short report was sent to all county agents in the milkshed. Practically all county agents found these reports helpful and many used them in radio broadcasts and in printed reports.

Each month 845 copies of the Skyline Reporter, a 2-page report on the work and activities of this dairy council program, went to all pool plants, cooperatives, dairy organizations, extension officials and other agricultural leaders in this milkshed.

Farm and dairy publications cooperated in explaining the work of this program and radio stations in New York City and in the milkshed cooperated in helping to keep producers informed.

Talks before farm groups, recordings for radio use, and the exhibit at the New York State fair reached many farmers with facts about the work this nutrition and milk promotion program does.

The report issued quarterly by Milk for Health, Inc., has proved important in informing all participating dairymen about this program.

The Metropolitan Milk Producers Cooperative Bargaining Agency, with a membership of 66 dairy cooperatives, unanimously passed a resolution at its annual meeting on December 6, 1955, which said in part:

"Now, therefore, be it

"*Resolved*, That we believe the Greater New York program of the National Dairy Council as administered by the Greater New York Producers Dairy Council committee, which serves as board of directors, to be one of proven merit as indicated by increased milk sales, and worthy of continuous and ever-increasing support of every producer in the marketing area."

Fluid-milk sales each month in 1955 exceeded those for the corresponding month a year earlier.

Digest of Annual Report by George E. Stringfellow, President of the New Jersey Taxpayers Association, and Senior Vice President of Thomas A. Edison, Inc., Delivered at the Silver Anniversary Meeting of the Association, November 14, 1955, at Newark, N. J.

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1956

Mr. REECE of Tennessee. Mr. Speaker, Mr. George E. Stringfellow, senior vice president of Thomas A. Edison, Inc., and president of the New Jersey Taxpayers Association, delivered a very informative report at the silver anniversary meeting of the association, which I think would be of interest to the people of America, and I am presenting it for the RECORD.

The report and newspaper articles follow:

DIGEST OF ANNUAL REPORT BY GEORGE E. STRINGFELLOW, PRESIDENT OF THE NEW JERSEY TAXPAYERS ASSOCIATION, AND SENIOR VICE PRESIDENT OF THOMAS A. EDISON, INC., DELIVERED AT THE SILVER ANNIVERSARY MEETING OF THE ASSOCIATION, NOVEMBER 14, 1955, AT NEWARK, N. J.

Tonight the New Jersey Taxpayers Association celebrates its silver anniversary. Twenty-five years ago—in the depths of the depression—a group of New Jersey taxpayers, alarmed by the mounting cost of Government and the impact of taxation on our economy, resolved to do something about it. As a result of their work and the work of those who followed them, the taxpayers of New Jersey are the beneficiaries of—

1. Better government, and
2. The saving of millions of dollars.

Our association is nonpartisan, nonpolitical, and nonprofit. It devotes its energy to the adoption of sound business principles in the operation of government. Our goal is to obtain essential governmental services at a cost we taxpayers can afford to pay.

New Jersey is a great and growing State. Its industry, commerce, and agriculture; its urban centers, its suburbs; its forests, mountains, and seashore resorts; its rail facilities; its seats of learning; combine to make it great. They explain its population growth of about one hundred thousand persons per year.

Mindful of these characteristics, our association seeks a revenue system which will protect and stimulate industry, production, and employment in the interest of all our citizens. Its purpose is to see that taxes are kept within bounds, public expenditures are kept under control, and public services are provided when necessary with maximum economy.

As we stand at the threshold of our second quarter of a century, may I call to your mind a few of our association's achievements of recent years, not to boast of past successes but to indicate a standard for even greater goals for the future:

1. The State government proposed two successive $25 million programs for expanding institutional facilities. After a study our association found the proposals sound and supported the bond issues to finance the needed facilities. The voters authorized the bond issues and our association recommended way of efficiently using the funds.

2. Our association opposed the $105 million veterans' bonus. The referendum was defeated.

3. We found the proposed $60 million State school aid program unsound. The proposal was reduced to $30 million. We supported it and the voters authorized the $30 million bond issue. By reducing the proposal from 60 to 30 million dollars, the people avoided a 5 percent corporated income tax.

4. Following the adoption of the optional municipal charter laws, our association helped local groups to establish a more representative system of local government.

5. When our State's inequitable assessment system needed to be revised, our association came forth with its "Practical Aids to Improved Property Assessing." This signaled the beginning of widespread constructive action in this field.

Demand for the association's publication "Financial Statistics of New Jersey Local Government," has grown with each annual edition. It is accepted today as a standard reference work—by taxpayers, newspapers, local and State officials, and others.

Our pamphlets embodying basic procedures for "Guiding Municipal Growth" and "Restoring Urban Values" enjoy wide acceptance and use by citizens and public officials alike.

These and other activities attest to the association's competence and effectiveness. They have contributed heavily to our State's record as 1 of 3 States in the Union with neither sales tax, nor personal or corporate income tax.

Our association's successful record results from a combination of staff and volunteer talents. A corps of experts devotes full time to research in governmental operation and finance. Their findings are studied by carefully selected committees, who in turn make their recommendations to the board of directors who make the association's policies.

By this means the best professional talent and the special abilities of association members are focused jointly on governmental problems in such fields as assessment, purchasing, institutional administration, budgeting, administrative planning, construction, water supply, etc. All of our taxpayers are beneficiaries of these efforts.

We are grateful to the many organizations who have labored with us in your behalf—to the press and radio, to the many public officials who have contributed generously of their governmental knowledge to help our association in its work, and to the many businesses, both small and large, who have made their specialized abilities available.

As we close the first quarter century of our association's activities, it is my privilege to express appreciation to our officers and directors, present and past, to our many loyal committeemen, and to the members of our staff.

And now a personal note: It has been my pleasure to serve our association for 12 years as a member of the board of directors, 11 years as a member of the executive committee, and 5 years as chairman of the executive committee. I am now finishing my fourth year as president.

At my request, I was not renominated to the board at our meeting today and it is my intention to retire as president at the annual meeting of the board of directors on December 12. Rest assured that in withdrawing from further official activities in our association, I do so with a heart that is filled with gratitude for your tolerance, for your patience, and especially for your cooperation, without which my efforts would have been stymied.

Our association never had a stronger board of directors or a stronger executive committee than today, and I am sure my successor will carry the association to a greater degree of public service than it has heretofore attained. To that end I pledge my best efforts.

[From the Trentonian, Trenton, N. J., of December 15, 1955]

ANOTHER QUARTER CENTURY

The New Jersey Taxpayers Association has started off on its second 25 years with high hopes that accomplishments will compare favorably with those of its first quarter century. Upon Francis J. Pinque, its new president, falls the twin burden of guiding the association along the paths of progress and of filling the shoes of his capable and distinguished predecessor, George E. Stringfellow.

Taxpayers of the State will wish Pinque all success. Trentonians in particular will extend the same felicitations to Clarence W. Snyder of this city, controller of John A. Roebling's Sons Co., who succeeds Pinque as treasurer of the organization.

Stringfellow, who served as a director since 1943 and as president from 1951, was suitably honored upon the occasion of his retirement. He has indeed earned the plaudits of his associates and the thanks of thousands of New Jersey citizens.

[From the News Letter of the New Jersey Manufacturers Association, December 1, 1955]

A QUARTER CENTURY OF SERVICE TO NEW JERSEY

A popular almanac lists only six memorable events in 1930, the year following the stock-

market crash. Unnoticed was the formation of a New Jersey organization in that year which was not only to save the State's taxpayers millions of dollars, but to help give them better government.

For 25 years the New Jersey Taxpayers Association has kept a vigilant eye on the operations and proposed operations of Federal, State, and local government bodies. Its vigilance has nothing in common with the miserly tendency to disapprove needed services merely because they require expenditures. Its support of two successive $25 million programs for expansion of institutional facilities is evidence that its scrutiny is to determine the facts that will give the citizen a dollar of service—if the service is needed—for a dollar of tax—if the tax is necessary.

[From the Jersey Journal and Jersey Observer of December 24, 1955]

AND THE NEXT 25 YEARS?

The New Jersey Taxpayers Association is starting its 26th year and after a quarter century there is more for it to do than ever. The association was started in the days of deepest depression when a group of New Jersey citizens decided to do something about the impact of taxation on the economy.

In those days the economy was so disrupted that even the lightest weight on taxation meant a sore spot. And, yet, great as the need for the taxpayers association was then, it is even greater now. In days of lush times there is less attention to the need for thrift and conservation.

During the last 5 years George Stringfellow, the East Orange industrialist, served as president. In that period the association acquired a fine reputation by working steadfastly for prudence and tolerance in government.

In its next quarter century, as it moves toward a golden anniversary from the silver, the association must foster both of these qualities in New Jersey government as it goes about its work.

[From the Camden (N. J.) Courier-Post of December 16, 1955]

MANY HAPPY RETURNS

Organized in 1930, the New Jersey Taxpayers Association has just celebrated its silver anniversary.

The association is privately financed and its chief mission in life is, as its title implies, safeguarding the interests of the taxpayer, protecting him against the encroachment of Government extravagance, and keeping him informed of whether his tax money is being spent wisely and well.

The association begins its second quarter century under the leadership of Francis J. Pinque of East Orange, an insurance company executive and former treasurer of the association, who has been elected president to succeed George E. Stringfellow, vice president of Thomas A. Edison, Inc., and longtime leader in the association.

Counterparts of the Taxpayers Association may exist in some other States but if there are any that have been more zealous in behalf of the man who foots the bills of government, or are more devoted to the public interest, the Courier-Post does not know of them. In fact, we are on safe ground in saying that there are none such. The association has been and is is powerful force for good in New Jersey and we are fortunate to have it. Its achievements under its retiring president have been notable and the best wish we can make for its new president is that under him they will be equally so.

[From the New York World-Telegram and Sun of December 24, 1955]

TAXPAYERS' WATCHDOG

It's a pleasure to salute the New Jersey Taxpayers' Association on its silver anniversary.

Government economy—a rare commodity these days—is the watchword of the NJTA. The goal is not arbitrary penny-pinching but rather, as the association expresses it, "to obtain essential governmental services at a cost we taxpayers can afford to pay."

Jersey's favorable tax climate is surely due in part to the NJTA's relentless efforts to keep State spending within reason.

We wish the association many more productive years—and we regret that there are not more groups like it.

[From the Bergen Evening Record of March 7, 1955]

THE TAXPAYERS AT AGE 25

For 25 years the New Jersey Taxpayers Association has been a vital force for good government in New Jersey—economical, efficient, responsive government. It has evolved brilliant fact-finding methods, has made business and industry sensitive to their stake in sound government, and has genially resisted the doctrinaire—its support of spending for State institutions and for schools exemplifies its insistence on adopting what works best for most. The association has just celebrated its silver anniversary. One looks forward to hailing it and its good works a quarter-century hence, with confidence it will be as young, bright-eyed, loose-jointed, and unafraid as it was on the depression year Friday morning it was born.

[From the Newark (N. J.) Star Ledger]

THE PUBLIC'S WATCHDOG

Once upon a time, the people who lived in a community ran it. They knew just how many nickels and dimes went into what community projects, and why. They were the government as well as the people.

It's still like that in some tiny little communities, nestled back from the main roads, but nowhere else. Our communities are so big that too often the people who live in them don't even know the names of their officials, let alone recognize them on the street. As for State capitals and Washington—well, they're just faraway places and the policies enacted in them are faraway things. This is the flaw in growing too big.

An institution has developed which fills in part of the gap. It isn't specified in the Constitution, but it is part of our democratic way of life. It is the pressure group. It preserves the liaison between the individual and his government by keeping him informed.

One such group in our State is the New Jersey Taxpayers Association, now marking its 25th anniversary. Its mission is sweet and simple. It wants to improve government and yet keep expenditures down so taxes will be no higher than absolutely necessary. It is hard to quarrel with this mission, and is equally hard to quarrel with the way the New Jersey Taxpayers Association has carried it out these past 25 years. It has been a force for much good in our State, on a nonpartisan, nonpolitical, and nonprofit basis. It has not limited itself solely to carping for economy. Instead, it has led such campaigns as more State aid to schools, expansion of State institutional facilities, and revision of local forms of government to make them more representative.

The New Jersey Taxpayers Association is, in the finest sense of the word, the public's watchdog.

[From the Trenton (N. J.) Evening Times of December 30, 1955]

FOR NEW YEAR FISCAL CONTROL

In its 1956 platform, the New Jersey Taxpayers Association exhibits characteristic regard for prudent management of public affairs with a pointed appeal for "controlling tomorrow's taxes today."

A concise program is suggested: "Federal finances must be brought under control; States finances must be kept in control; local services must be adapted to changing conditions if control over local affairs is to be preserved."

Here, indeed, are the fundamentals of sound fiscal administration throughout the New Year. If financial restraints are effectively imposed at the national, State and local levels, the heavy tax burden will be eased with attendant benefits for every American citizen.

[From the Passaic and Clifton (N. J.) Herald News of October 24, 1955]

TWENTY-FIVE YEARS OF USEFUL SERVICE

For 25 years the New Jersey Taxpayers Association has been the public's loyal watchdog over the fiscal affairs of our State. In speeches, reports, and forums it has sought to cast a spotlight on matters that affect our pocketbooks as well as our general welfare.

It has succeeded in this task so well that it has become general practice for legislative groups to turn to the taxpayers' association for information and for advice on questions of finance, administration, and taxes. Yet this flattering recognition has in no way caused the association to lessen its vigilance. Even when its advice may not be wanted, the association never hesitates to speak up.

On its silver anniversary we salute the association and wish it well. New Jersey is one of the most economically administered States in the Union and also one of the most modern. The taxpayers' association has had much to do with bringing that about.

A Foreign Aid Formula

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1956

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following extracts from an article by Roscoe Drummond appearing in the Washington Post of February 28, entitled "Close Reexamination of Aid Plan Called For":

CLOSE REEXAMINATION OF AID PLAN CALLED FOR

It seems to me that the clue to our true relationship with all these new nations is imbedded in the most meaningful fact of recent history—the one fact which, perhaps above all others, clarifies and separates Soviet purpose and Western purpose. It is this:

Since 1939, the Soviet and Chinese Communists through force, threat and organized coup d'etat in neighboring States, have annexed outright or extended their military and political control over 740,216,000 people and more than 13,400,000 square kilometers of territory.

In this same period the Western non-Communist powers have granted freedom and/or self-rule to 692,969,000 peoples covering 15,294,640 square kilometers of territory.

In a word, during the past decade and a half, Soviet and Chinese Communists have imposed dominance and dependence on about 700 million people and the West have helped give freedom and independence to about the same number.

These newly freed peoples, these newly independent nations, have long looked to the ideas and ideals of the American Revolution as their inspiration. As the Prime Minister of Burma, U Nu, remarked when he visited Independence Hall in Philadelphia last summer: "In our part of the world the ideas of

the American Revolution are today the most explosive of all forces, more explosive in their capacity to change the world than B–52's or even atomic bombs."

Our struggle for our freedom, our achievement of it and our upbuilding of an undeveloped continent have long fired the imaginations and incentives of Asians to go and do likewise.

Shouldn't our relationship with these freedom-cherishing, poverty-plagued nations be that of the most friendly, understanding senior democracy intent upon helping these new democracies to help themselves deepen their roots, guard their freedom, improve their economic lot and fashion their own free nation in their own image in their own way—as we did?

Such an objective would appeal to Americans as practical and realizable—and worth doing in a way which will serve our own security and that of the whole free world.

The Supreme Court Has No Power To Amend the Constitution

EXTENSION OF REMARKS
OF
HON. ROBERT T. ASHMORE
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. ASHMORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a speech to the Lions Club of Union, S. C., delivered by Hon. A. G. Kennedy, probate judge, Union County, S. C., wherein he discusses the legal methods of amending the Constitution of the United States and condemns the present Supreme Court for its integration decision of May 1954. He very properly excoriates the Court for ignoring stare decisis and basing its decision on sociological and psychological teachings and opinions.

The speech follows:

THE SUPREME COURT HAS NO POWER TO AMEND THE CONSTITUTION

(By A. G. Kennedy)

ART. V. The Congress, whenever two-thirds of both houses shall deem it necessary, shall propose amendments to this Constitution, or, on the application of the legislatures of two-thirds of the several States, shall call a convention for proposing amendments, which, in either case, shall be valid to all intents and purposes, as part of this Constitution, when ratified by the legislatures of three-fourths of the several States, or by conventions in three-fourths thereof, as the one or the other mode of ratification may be proposed by the Congress."

President Washington in his Farewell Adress to the American people, September 17, 196, among other things, warned us of the danger of one department of the Government encroaching upon and usurping the functions of other departments. He urged that the Constitution should not be amended or altered except in the ways provided therein, and that it should not be amended by usurpation, the weapon by which free governments are destroyed. The recent Supreme Court decision has effectually amended the Constitution by court decree (usurpation), the very thing the Father of Our Country warned us against.

The 18th amendment of the Constitution was repealed by the 21st amendment not by court decree. We who believe in States rights and constitutional government should fight all encroachments upon these institutions, with all our might and means.

Stare decisis: "To stand by things as decided."

Over 40 years ago the learned Justice Charles Evans Hughes, afterward Chief Justice of the Supreme Court of the United States, citing the case of *Plessy* v. *Ferguson* (163 U. S. 537 (1896)), affirmed, "That the question could no longer be considered an open one, that it was not an infraction of the 14th amendment for a State to require separate, but equal, accommodations for the two races." *McCabe* v. *Atchison, T. & S. F. Ry.* (235 U. S. 151, 160 (1914)). Twenty-five years ago the Supreme Court of the United States noted that segregation in public schools had been "many times decided to be within the constitutional power of the State legislature to settle without intervention of the Federal courts under the Federal Constitution." In the case of *Gong* v. *Rice* (275 U. S. 78 (1927)), a unanimous decision of the Supreme Court held that segregation in the schools was not violative of constitutional rights. The court at the time of this decision included Chief Justice Taft and Justices Stone, Holmes, and Brandeis The Congress of the United States and 17 of the States for three-quarters of a century have required segregation of the races in the public schools, with the approval of the leading appellate courts of the country, and with the unanimous approval of the United States Supreme Court. Yet the present Supreme Court, by unanimous illegal decision, declared segregation of the races in public schools to be unlawful.

The 14th amendment to the United States Constitution which had been construed many times in cases before the high Court, according to accepted legal rules of court procedure. The Court was bound to accept former decisions of the same Court as the law of the case when the same question is involved. A juror is sworn to perform his duty in the case which he is called upon to hear and decide, but if he disregards his oath and sworn duty, ignores the evidence and law in the trial of the case he has done no more than the Supreme Court has done in the recent school segregation case.

I do not think Benedict Arnold betrayed the trust reposed in him more than the nine members of the Supreme Court of the United States have done in the Clarendon County school segregation case. I believe the Court made its decision upon political expediency knowing at the time that they were being unfaithful to their trust, and in violation of well established laws and customs. The Roman Governor Pontius Pilate made a decision to please the rabble and to gain the applause of those who would slay an innocent man. The Court has brought disgrace upon themselves and a contempt for the Court by all who know or hold the law in high regard.

The Court in this disgraceful decision has failed to follow the Courts precedents and has chosen to follow the example of the Roman Governor's decision who scourged the lonely Nazarene, and delivered him to his persecutors to be crucified. The justices have shown neither mental, judicial, nor moral fitness for the positions which they occupy. If all nine members of the Supreme Court were hanged upon the same scaffold for their wrong and their bodies buried in a common unholy grave, I should like the privilege of writing the epitaph for their unhallowed common tomb. I would use some paraphrased lines from Scott's, Lay of the Last Minstrel:

"Despite their titles, power and pelf
The wretches concentered all in self,
Living, have forfeited fair renown and
doubly dying, have gone down to the
vile dust from whence they sprung,
Unwept, unhonored, and unsung."

Dulles Leads With His Chin

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. FEIGHAN. Mr. Speaker, the Cleveland Press carried a most significant editorial on the subject of the latest Communist propaganda offensive. The title of that editorial is "Dulles Leads With His Chin." Many of us who have maintained an interest in Mr. Dulles' activities as Secretary of State, were astonished to hear attributed to him a belief that the Russian Communists had changed their fundamental doctrine, and even worse, that the Communists were shifting to a policy of tolerance and nonviolence in an effort to develop a government more like that of the governments of the free world. Mr. Dulles has been very poorly advised on what took place at the so-called 20th congress meeting of the Communist Party in Moscow. It would be well for him to look back of the briefing papers which caused him to make such unfounded statements as those attributed to him in order to examine the competence of those who are writing such misleading briefing papers.

Communist Party Boss Khrushchev made it crystal clear that the usual Communist methods of violence will be used only in those countries where the resistance to communism is strong, and that the Communist takeover of the neutralist nations could be easily accomplished by what he called parliamentary methods and the deception of the popular-front type of governments. In effect, Party Boss Khrushchev stated the United States above all, was marked for violent treatment by the Communist conspiracy rather than the conciliatory and friendly approach which the Kremlin leaders have been proclaiming so loudly of late.

It is to be hoped that Mr. Dulles will find an appropriate occasion in the immediate future to correct the misleading statements attributed to him. Such a course of action is urgent in order to prevent confusion among the people of the free world and to repair the damage that will accrue to the hopes and aspirations of the enslaved people for a day of ultimate liberation.

Under leave granted, I insert the editorial which appeared in the Cleveland Press of February 27, titled "Dulles Leads With His Chin":

The startling part of Secretary of State Dulles' interpretation of what the Bolsheviks are up to is that it disagrees with most others'.

He sees only Soviet failures; other observers see disturbing Soviet successes.

He sees fundamental changes in Communist doctrine, others see only clever tactical moves.

Dulles says the Kremlin's new diplomatic and economic offensive comes from Soviet weakness and failure of past policies—that the strength, unity and determination of the free world has forced the Soviets to "revise their creed from A to Z."

The Reds, he says, are shifting their basic doctrines to tolerance and nonviolence, trying to become more like the non-Communist world, and ultimately may produce a more normal Russia.

The handful of Bolshevik conspirators who seized power in 1917 have gone a long way in 38 years.

Then they had only a headful of Marx and a handful of bombs.

Today they rule the greatest and most evil empire in history—one-third of the earth's surface and 900 million people.

Much of it was acquired in the last 10 years and all of it through a policy of intolerance and violence.

There is nothing in the 50,000-word speech of Khrushchev to justify hope that any fundamental changes are occurring.

Unchanged is the Red doctrine that ends justify any means.

Khrushchev tried to hoodwink the rest of the world into believing he has scrapped the "inevitability of war" thesis. Yet in the same passage he concedes that in countries where resistance to the Red wave of the future is great, it still will be necessary to use force.

Dulles' claim that the strength, unity, and determination of the free world compelled the Bolsheviks to yell "uncle" and promise to be good, recalls Artemus Ward's description of a fight with a secessionist:

"By a sudden and adroit movement I placed my left eye agin the secesher's fist. Saw stars and other loominaries. Got down on the ground to see if he had dropt suthin' * * * I returned the compliment by placin' my stummick agin his right foot."

Stop Whispering: Proclaim United States Story

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. FEIGHAN. Mr. Speaker, on January 20, the Philadelphia Inquirer carried an editorial titled "Stop Whispering: Proclaim United States Story." I think this editorial has taken on a great deal of additional meaning from the events which have happened since January 20. In particular, I refer to the so-called 20th Congress meeting of the Communist Party which adjourned in Moscow yesterday. At their conclave, the Communist conspirators announced to the world that they were going to redouble their efforts by the use of programs of subversion and duplicity to conquer the world. The Philadelphia Inquirer makes a conservative estimate when it says in its editorial that the Russian Communists are redoubling their propaganda efforts. This editorial also points out another significant fact which is often lost sight of as we continue the battle of the cold war—that it is just as important for us to win the war for the minds of men as it would be to win a war waged with guns, bombs, and planes. We cannot win such a war on a "piggy bank budget."

Under leave obtained, I include the editorial, Stop Whispering: Proclaim United States Story.

America has a selling job to do. That job is to sell our country and all it means to the peoples of the world.

For many decades the United States of America was a beacon in the minds of men. Our country was held high as a friend of the oppressed, helper of the needy, champion of human liberty.

Today all that is changed. We seem to have fewer friends abroad with each succeeding year. What friends we have too often are in high places; the peoples seem to have lost touch. They appear ready to believe Communist lies that distort American ideals. Never in human history has a country done so much to assist others as ours—only to be misunderstood and maligned.

The Inquirer believes there is one basic reason for this grave state of affairs: Failure to get the real story of the real America directly to the peoples of other countries.

That failure is the more lamentable when we realize that salesmanship has long been one of our strong points. We can sell United States cars, United States films, United States music, United States goods almost anywhere. But we have slipped up badly on selling the great Nation which produced those goods—and so much more that is precious in the world today.

Because citizens of the United States have not been conditioned to regard propaganda as a major and normal function of government, our country's information agencies have been working in slow motion, with inadequate funds, insufficient personnel and indifferent public support. Even now the Voice of America is a whisper, not a shout.

Lacking, above all, has been that spirit of dedication to our cause which the Communists pour out in such measure in behalf of their campaign to enslave mankind.

Many United States Information Agency workers are doing a valiant job. But they struggle not only against their opposite numbers in Red agencies but against the work of Communists who have infiltrated schools, colleges, and other institutions, especially in Asia and the Middle East.

At a time when the cold war is being renewed by Moscow with redoubled vigor—even on our Latin American doorstep—it is time for Americans to face facts. It s just as important for us to win this war for the minds of men as it would be to win a war waged with guns, bombs, and planes. The stakes are just as high. Yet we would not expect to win a shooting war with a piggy-bank budget. How then can we expect to win the cold war with that same sort of small-change financing?

We have been spending, with hardly any question, for defense and foreign aid. The new budget includes over $40 billion for those two categories. Proportionately the job of selling the American story is almost ignored. Surely if we were to allocate for that purpose only one-half of 1 percent of that sum—or about $200 million—it would not be too much. General Motors alone spends an estimated $100 million a year to advertise and promote its products.

A drastically stepped-up expenditure to sell the American way would, in itself, be a valuable adjunct to the defense and foreign aid programs themselves. They are all part of the same struggle—to keep the free world free, and preserve our own freedom thereby.

The Inquirer believes that getting the truth about the United States to the peoples of other lands is one of the most urgent tasks we face. That is why a broadly expanded program should become part of our bipartisan foreign policy.

That is why we hope both the Republican and Democratic Party platforms for 1956 will include a pledge to that end.

We must stop whispering. We must proclaim the truth in words that will be heard, and understood clearly, throughout the world.

Belated Riddance: Now Deport the Rascal

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the Nashville Banner of February 27, 1956, titled "Now Deport the Rascal." The editorial says so eloquently what I have been trying to say the past week or so. I hope it is read by the Department of State with the hope that this article will prompt it to reveal how Peron got into the Washington Hotel in the first place.

The editorial follows:

BELATED RIDDANCE: NOW DEPORT THE RASCAL

Eviction of Juan Peron from the Washington Hotel in Colon, Panama, comes rather belatedly. This hotel is owned by an agency of the United States Government. The mere fact that Peron was a guest in that hotel gave strong credence that he was being given asylum in Panama with the sanction of Uncle Sam.

This outrageous affront to decency and to the sensibilities of those who detest dictators was likewise a stench in the nostrils of our Latin neighbors to the south. Few, if any, of them could understand why the United States was ostensibly offering protection to this lecherous libertine who despoiled a great country morally, politically, and economically, while grafting hundreds of millions of dollars for himself and his Peronist following.

The Republic of Panama could hardly move for his deportation while Peron lolled in the lap of Uncle Sam. Despite protestations to the contrary, his very presence on United States property was a sign to all that he was not to be molested. He had been driven from Argentina in disgrace. He had then been forced to leave Paraguay, to which he had fled. He was supposed to be headed for Switzerland, where one of his girl friends was awaiting him with power of attorney and reportedly with a couple of hundred million dollars which Peron had bilked from his beloved descamisados."

As a desperate, dangerous disturber wherever he may be, he was allowed to alight on United States property in Panama. From there he has breathed fire and brimstone, threatening revolution and bloodshed in Argentina. He has predicted that 1 million of his former countrymen who are glad that he is no longer practicing his perversions and thievery among them would die in the disturbance which would accompany his proposed return to Cosa Rosada and the buxom bosom of Nelly Rivas.

His stay in United States Government property had been vigorously protested by the Inter-American Press Association which has declared to the State Department that Peron's presence in the Washington Hotel, despite protocol or the so-called diplomatic niceties, was both indefensible and impossible of reasonable explanation on any grounds.

Peron is a menace to the peace and tranquility of the Western Hemisphere, so long as he is within its boundaries. Now that he is being removed after so long from his "privileged sanctuary" and the implied protection of the American flag, it is to be hoped that Panama will take immediate steps to deport him outside the hemisphere.

The coddling which he has too long received from representatives of the United

States Government, particularly the Latin division of our own State Department, is not only a disgrace in the eyes of those who abhor totalitarianism, but a disillusionment to Latin-Americans who cannot understand such shenanigans from a nation which shouts to high heaven about liberty and freedom while throwing its protecting arms and cloak of approval about the shoulders of the most ruthless dictator that ever subjugated a people in the Western Hemisphere.

Now let Panama get him out of its confines. Perhaps Argentina and the rest of the Latin-Americas may then be able to settle down to stable government and internal peace.

When he departs let no representative of the United States be there to bid him fond farewell. There's been enough of that for a while, so far as this lunatic and arrant rascal is concerned.

Phoenix, Ariz.: Seventy-five Years Old and Still Growing

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD editorials from the Arizona Republic and the Phoenix Gazette commemorating the 75th anniversary of the founding of Phoenix, Ariz. Seventy-five years ago Phoenix was a very small village; now it is one of the great cities of the West. Every State in the Union has contributed to the growth of Phoenix, and the present city of Phoenix is a monument to the beneficial results which may be achieved from wise reclamation projects:

[From the Arizona Republic of February 25, 1956]

ONE TO GROW ON

The March 5, 1872, edition of a California newspaper carried the following comment: "This is a smart town which had its first house completed about a year ago. Now it contains many houses, also stores, workshops, hotels, butcher shop, bakery, courthouse, jail, and an excellent school, which has been in operation for months. * * * When it has become the capital city of the Territory, which it will, undoubtedly, at no very distant day, and when the 'iron horse' steams through our country on the Texas Pacific Road, Salt River Valley will be the garden of the Pacific slope, and Phoenix the most important inland town."

This enthusiastic report must have appeared overoptimistic to local citizens at the time. It wasn't until 9 years later that Phoenix even became incorporated * * * 75 years ago today.

But through the years Phoenix has moved steadily ahead. At times the progress must have seemed terribly slow to the local citizenry. But Phoenix did become the territorial capital in 1889. By that time the "iron horse" had come to Phoenix. In 1891 a devastating flood almost swept the city away, but the town recovered and in 1910 the population reached 11,134. In the next 10 years the population of Phoenix almost trebled. And Phoenix was on its way.

Today Phoenix has become one of the great resort centers of the country and of the world. It has spread across the Valley of the Sun and is bursting at its seams. Industry is flowing into the city in a steadily increasing stream. The early prophet's dreams have been realized to a far greater extent than he could have imagined. But the story of the little hay camp founded so many years ago beside the Salt River is far from told. Its greatest days and greatest triumphs still lie ahead for it is peopled with men of strength and vision who will see that it never drops into deadening somnolence, but moves on, ahead of the rest of the country.

We wish this great city of Phoenix a happy 75th birthday and many, many, happy returns of the day, each of them marking the end of a period of achievement and the beginning of a new era of prosperity and growth.

[From the Phoenix Gazette of February 24, 1956]

SEVENTY-FIVE YEARS OLD AND STILL GROWING

Phoenix is 75 years old tomorrow. The virile, growing city doesn't look its age. Perhaps that is the reason for such spectacular progress in recent years—Phoenix has been reborn a number of times, as its mythical name implies.

The handsome, modern city we know today is a far cry from the struggling young community incorporated on February 25, 1881. And even at that early date there had been an initial period of community expansion after the Salt River Valley Town Association was formed in 1870. From its very earliest beginnings, Phoenix has consistently and repeatedly outgrown the dreams and hopes of each generation. The city is still doing this on its 75th anniversary and there are many indications that it will continue to do so.

What accounts for this remarkable growth cycle? Many cities are 75 years old or older; many have long since passed their prime. What is it that keeps Phoenix ever young and ever growing?

Arizona's booming economy, in which Phoenix has long played a major role, accounts in part for the phenomenon, of course, but there is something more. A fine climate, varied community interests, visitors who return year after year—all of these have contributed. Sound municipal government, good schools, virtually unlimited recreational possibilities, all these and more are underlying factors in the Phoenix expansion story.

But perhaps the greatest influences for sustained growth are the residents Phoenix has attracted through the generations. People make a city. That is why Phoenix is the youngest, fastest growing, 75-year-old city in America.

Politics and Parity; Sanity and Supports

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. DAGUE. Mr. Speaker, there is now under debate in the other body one of the most unsound, unrealistic, and wholly demagogic bills that has ever been presented to any Congress. I refer specifically to the pending farm bill which undertakes to combine the administration's soil bank plan with a restoration of 90 percent supports.

The proponents of this outlandish combination ignore completely the established fact that farm prices hit the toboggan while high rigid supports were in full force and effect, and it is without all logic and contrary to commonsense to now turn to a device under which the farmer has taken his worst licking as a means of restoring him to economic parity with the rest of industry.

The soil bank plan is designed primarily to eliminate the agricultural surpluses which have acted as a price-depressant, and we certainly meet ourselves coming back when we reinstitute high supports which can only serve to accelerate production and start the extra crops, for which there is no market, again rolling into Government storage bins.

The proponents of this legislative throwback, motivated solely by the concern for the farm vote, are charging the administration—and Secretary Benson—with dragging their heels in attempting to dispose of the enormous pile of food and fiber now in Government hands, whereas the record is quite clear that with 90 percent supports we have priced ourselves completely out of the foreign market. The Secretary is striving with might and main to dispose of this albatrosslike burden from around the Department's neck, but the best he has been able to do is to sell his goods at cutrate prices or for counterpart funds, either of which means a staggering loss to the American taxpayer.

Those who are now bleeding so profusely for the farmer—while all the while they are concerned only with his vote—should come forth honestly and advocate a straight cash subsidy to take care of the differential between farm income and farm costs. I would, of course, vote against such handouts just as I have always opposed high rigid supports, although I must concede that such a plan would be marked by an honesty which is wholly absent from the current legislative monstrosity now pending in the other body.

The following is an editorial taken from the Philadelphia Inquirer of February 25, wherein the finger is put directly on the inconsistencies embodied in this current hybrid—which in common with its kind can only prove to be sterile:

GET POLITICS OUT OF FARM SUPPORT BILL

Just about the most freakish—and most unsound—legislation ever attempted on America's farm problems is the hybrid bill now before Congress.

It is an election-year monstrosity in which Democrats, for perfectly obvious political reasons, are linked with some farm State Republicans to force a return to the high rigid farm price-support system. In this move the high, unalterable, and artificial support plan is jammed on top of the administration's "soil bank" proposal.

That would make the measure, by which the administration aimed to reduce excess acreage and thereby to hold down huge, unmanageable farm crop surpluses, worthless.

Is this politically motivated scheme headed toward greater prosperity for farmers? Senator GEORGE D. AIKEN, of Vermont, declared in a speech yesterday, "High rigid price supports never have brought prosperity to the American farmer and never will."

But they have brought the dead weight of vast, unusable, unsalable accumulations of wheat, corn, cotton, and peanuts. We think Secretary of Agriculture Ezra Taft Benson called the turn in his television appearance Thursday night when he declared,

"Surpluses are smothering farm prices and income."

They can't be sold to any worthwhile extent; can't even be given away. But they hang like a vast pall over the farmers of the United States: always a threat to existing prices; always a brake on better prices.

Senator AIKEN showed yesterday how the real upsurge of farm prosperity came from the Second World War; then from the Korean conflict. Farm prices, he said, skidded between those two outbreaks; then took another downward turn starting in 1952.

Congress gave President Eisenhower a mandatory directive to continue the high price supports—the 90 percent of parity system—for 2 years, the Senator said. And what happened? It filled the Government and other warehouses to overflowing again. It made farmers—to be paid with tax money—plough and sow acreage far above requirements to produce immense crops that had no place to go except those warehouses.

Mr. Benson has fought valiantly, and continues to fight, for a formula that will cut down unneeded crop acreage, and unusable crops. And in time reduce the need for all this storage of crops nobody wants. Senator AIKEN took a significant jab on the latter point in his speech when he referred to some champions of high-level supports as people "making fortunes out of storage of Government surpluses." Few, if any, of those engaged in crop storage are farmers.

The important thing Senator AIKEN did yesterday, as Mr. Benson has been doing all along, is to shed a clear light on the hard facts about high farm price supports: That they didn't solve farm problems and won't solve them if tried again.

The administration bill seeks, by reducing acreage—for which farmers would receive a subsidy, and a realistic application of flexible farm price supports—to create barriers against greater and greater surpluses.

But the farm-bloc amendments, for the 90-percent-of-parity supports, would wipe out the soil-bank plan. It's plain enough the soil bank would work to reduce farm crop surpluses; the high-level supports would make certain that more surpluses would occur. That shows how charged with politics the farm bloc's 90-percent-of-parity revival is.

For the farmers, and the Nation, it would be a backward step to continue the same faulty attempt to meet farm problems that have failed in the past. No sound, permanent solutions of those problems can be worked out by politicians for political reasons. The Eisenhower-Benson program seeks real and lasting solutions. Without the crippling partisan amendments that have been loaded on to it, that program should have the full support of farmers and all other citizens of the Nation.

Welcome to President Gronchi, of Italy

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues, the following editorial of welcome to President Gronchi, of Italy. The editorial appeared in the February 27, 1956, issue of the New York Herald Tribune:

WELCOME TO PRESIDENT GRONCHI

When President Giovanni Gronchi, of Italy, arrives in the United States today, it will be as the representative of a nation which has risen from the ruins of war to take its place as one of the most important and valued members of the free world community. The significance of his trip may be judged from the fact that it marks the first visit by an Italian head of state, whether a president or a king, to these shores. And it will be a comprehensive visit, as such journeys go, for the Italian President is scheduled to remain in the United States and Canada until the middle of March. Evidently, Mr. Gronchi takes seriously the job of sounding out American opinion on a variety of problems which confront his country as well as ours.

This is all to the good. Full, frank, and free discussion is the best way for member nations of the great Western Alliance to approach their problems and aline their policies. It would be well if the talks between President Gronchi and American officials brought about an interchange of ideas on the best way to face the common peril of Soviet communism, and if they reaffirmed the historic ties which so long have united the Italian and American peoples.

During his stay, President Gronchi will observe at firsthand many manifestations of the friendship in which American attitudes toward Italy are deeply rooted. He is certain to be greeted enthusiastically wherever he goes as the chosen spokesman of one of the great peoples of the West. In a literal sense, his is a good will trip. In common with all Americans, we bid him welcome.

The Lake Mead National Recreation Area

EXTENSION OF REMARKS
OF
HON. CLIFTON (CLIFF) YOUNG
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. YOUNG. Mr. Speaker, there are few people who would not agree that the Arizona Highways magazine, published monthly by the Arizona Highway Department is one of the finest publications of its type to be found anywhere.

Particularly, Mr. Speaker, I would like to commend the State of Arizona on the excellent work contained in the March 1956 issue of Arizona Highways, which is devoted to the Lake Mead National Recreation Area, part of which is situated in the State of Nevada. This area comprises 2,655 square miles of federally owned land and joins Grand Canyon National Monument on the east and follows the course of the Colorado River for approximately 185 miles, extending as far south as Bullhead City, Ariz. Within this vast acreage are to be found two sizable and scenic man-made lakes. One of these is Lake Mead, which is formed by the water impounded by Hoover Dam, which is the largest man-made lake in the world, and which with 550 miles of shoreline offers countless panoramas of rugged, beautiful country.

Below Lake Mead and formed by the water impounded by Davis Dam is found Lake Mojave, some 67 miles of rugged canyons and attractive mountain scenery.

To this recreation area last year came nearly 2½ million visitors who were thrilled by the scenic and geologic sights and scientific developments to be seen there. One of the best known visitors last fall came from as far as England. He was Sir David Campbell, and on the placid waters of Lake Mead he set a new world's speed record for hydroplanes.

Mr. Speaker, like all of the 181 areas in the National Park Service, there is much additional work to be done here. Potentially the Lake Mead National Recreation Area is one of the largest playgrounds in the Nation, although up to the present but a small portion of its potential has been tapped.

Even without further development, I am sure that those who have been fortunate enough to visit this area will agree that their efforts were very worth while, and the Arizona Highways magazine has done a commendable job in portraying it. It is my hope that the March issue will further kindle interest in the development of our National Park Service, and I am sure that my colleagues from Arizona join me in extending a cordial invitation to all who might be interested in seeing some of the outstanding scenery of the West to visit the Lake Mead National Recreation Area.

Nice Going, Admiral

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. BRAY. Mr. Speaker, amid the clamor for more funds and more power for civil defense authorities and the theorizing that America's answer to an enemy attack should be to run and hide, the following editorial from the Indianapolis Star, of February 24, 1956, is indeed refreshing:

NICE GOING, ADMIRAL

Adm. Arthur W. Radford, Chairman of the Joint Chiefs of Staff, underlined a truth yesterday that needs stating again and again. "The primary mission of our Armed Forces is to fight and defeat the enemy by offensive action anywhere, any time, and under any circumstances," he said. "This mission is so comprehensive and vitally important as to make highly undesirable the assignment of any additional diversionary functions and responsibilities." Amen.

The particular proposal Radford was objecting to was a law that would put civil defense into the Defense Department on a par with the Army, Navy, and Air Force. The best way to increase our present civil defense effectiveness, he declared, would be for the States to meet this challenge without, in effect, calling for standby martial law.

Of course the Army would administer martial law all over the country to the extent that governmental functions became disorganized following nuclear attack.

As before, we think the problem of civil defense needs to be simplified in the public mind—maybe then there will be more public cooperation with CD programs. The prob-

lem, essentially, is one of remaining at work under attack, preventing panic, and minimizing the aftereffects, locally, of any such attack. That is all anyone can do. There is no magic that can "empty" cities quickly enough to spare their populations, and if there were, the evacuations would give the enemy what he wanted anyway.

This much, certainly, is within the power of State organization to prepare for. It needs neither vastly greater Federal controls nor vast Federal expenditures.

Communism's New Face

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I call to your attention, and that of my other colleagues, two timely editorials appearing in the Christian Science Monitor.

Appearing on Saturday, February 25, 1956, was the following editorial:

COMMUNISM'S NEW FACE

Speakers at the 20th Communist Party Congress in Moscow took liberties with the name of Joseph Stalin which would have been unthinkable when that ironhanded dictator was alive. From Party Secretary Khrushchev on down they extolled collective leadership; and Deputy Premier Mikoyan, Foreign Minister Molotov, and former Premier Malenkov denounced the one-man rule of the autocrat whom they greeted a few years ago with fulsome eulogies.

It has long been so with dictators. Shakespeare's Mark Antony declaimed:

"But yesterday the word of Caesar might
Have stood against the world. Now lies he there,
And none so poor to do him reverence."

Antony had an adroit purpose in his oratory as the masters of the Soviet Union may have in their hours on hours of speeches.

They turn back 30 years to invoke memories of Lenin rather than Stalin, the Lenin who thought Stalin too rude to be party secretary and who had the resiliency to work with a group but who nevertheless was an intense, purposeful, and persistent revolutionary.

The facade they present of collective leadership may indeed embody a substantive change in the nature of the Soviet Government. At the very least it appears to signify that Mr. Khrushchev (or some other official) has not yet consolidated his power to where he can give orders that will be obeyed throughout the bureaucracy. At most it may mean that Bolshevist leaders of the second generation, plus some old Bolsheviks whom Stalin failed to kill off, have some faculty for reaching decisions by consultation and without fatal results to the losers.

If the latter assumption is true, it does not mean that communism is any less opposed to the success of free enterprise or representative government than before. The long-run objective still is to subvert governments and confiscate property, even though Communists in other countries are no longer under Soviet order to proclaim force and violence as their methods.

Outwardly the effect may be to seem to make the Soviet Government easier to live with if only because open talk of war is soft-pedaled. There doubtless will be efforts to form "popular fronts" with non-Communist parties if the latter will forget that the only purpose of a Communist in a parliamentary organization is to "bore from within" and destroy the structure.

Internally, the effect may be a little less rule by terror and a very slight gain of personal freedom by a few in the Soviet Union, particularly the technicians and managerial class whose skills are needed, and the example may spread to the satellites. But it should be remembered that Communist rule is essentially control by a zealous, hard-bitten minority, and that in history the rule of an oligarchy has often proved capable of as great cruelties as that of an autocrat.

The important consideration for the West in all this matter is that the existence of a new kind of government in the Kremlin, or even the appearance of a new kind of government there, will call for new policies and measures in the defense of free government elsewhere—particularly for unity in the face of blandishments and for greater emphasis on political and economic rather than solely military competition.

Appearing on Friday, February 24, 1956, was the timely article by Joseph C. Harsch:

STATE OF THE NATIONS—THE NEW SOVIET UNION—1

(By Joseph C. Harsch)

WASHINGTON.—We of the western world are now, beyond serious doubt, facing a new government on the other side of the great power divide we call the Iron Curtain.

This new government, which controls the ancient Russian lands the world Communist movement inherited from the Russian Revolution and the power empire built by Joseph Stalin, did not come into being at, or because of, the 20th Congress of the Communist Party of the Soviet Union. It is confirmed and its scope disclosed by the extraordinary events of this historic meeting.

This new government in Moscow is marked by a new attitude on the part of its members toward each other, toward the people they rule, toward Communist Parties beyond the Iron Curtain, and toward the outside world.

An assessment of this new government in Moscow, of its characteristics, its inclinations, and its policies, must be the basis for a new western approach to its greatest single external problem—the problem of its relationship with the Communist world.

The west has for a decade been operating against the Soviet Union of Joseph Stalin. Its present policies were formed in Stalin's days. They have not yet been changed substantially. There is no longer any serious doubt in the higher levels of policy thinking in Washington, London, Paris, and all the other western capitals of the world that there must be changes—and drastic changes.

The process of change begins, however, with a completed assessment of the new government in Moscow. This process has been underway for some time. It has not been completed. The massive texts produced at the 20th Congress of the Communist Party in Moscow are raw material for the studies.

What the government officials of the West are doing it is proposed to attempt to do in this space also—of course, tentatively and imperfectly. These columns, and those who read them and apply their own thinking to the process, will be paralleling the study process of the western governments. We, outside of government, cannot reach sure conclusions. We can think independently toward the conclusions which the governments are trying to reach.

Two facts about the Communist Party Congress in Moscow—the first held since Stalin's demise—express the changes in Moscow more simply and graphically than do all the thousands of words of the speeches.

The first of these is the change of faces from the last Congress of Stalin's day. The men and women who came from all corners of Stalin's realm to their last meeting with the old dictator were of the generation which had come into local power after the great purges of the thirties, and were led by Georgi M. Malenkov, then secretary-general of the Soviet Communist Party. They were the Stalin generation—molded by Stalin, subservient to his every wish and whim, trained to regard him as the voice of ultimate authority and wisdom.

The men and women who came to this 20th Congress in Moscow were of an older generation. They were the provincial governors, the village leaders, the ward bosses of the pre and early Stalin days who had been pushed aside during the purges and supplanted by the young Stalinists. They are the dispossessed of the Stalin era, and also the survivors who share in common the fearsome memory of the purges when so many of their colleagues disappeared and they themselves might so easily have been counted among the missing.

These were the people who cheered as Stalin never was cheered during the week of the congress when man after man of the new leadership stood up and repudiated the cult of personality. These are the field officers of the new government in Moscow. These are the beneficiaries of the passing of the Stalin era.

The second graphic fact was the remark made by Leonid Ilyichev, Soviet press chief, about Stalin statues in the Soviet Union. After Stalin and his works had been repudiated, Mr. Ilyichev remarked: "As for the monuments—they stay."

The man Stalin, his form of government, his interpretation of communism, his attitude toward the world had been criticized, revised, denounced, and repudiated. His statutes are allowed to remain.

This gives us our first two points of departure for assessing the new government in Moscow. It is based upon the rank and file of bureaucrats and local party men who were dispossessed and put in danger of their lives by Stalin. It is urbane toward his statues; as urbane as, say, Democrats were toward Republican statues in 1933 or as Republicans were toward Democratic statues in 1953.

It Is Time We Woke Up and Recognized the Necessity of Having Trained Scientists

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. WOLVERTON. Mr. Speaker, the time is at hand when it is necessary for a change of policy in administering our Selective Service System. Today it would seem that at least local draft boards and some State boards are oblivious of the need of trained scientists to maintain our national security, by providing advanced types of weapons that will exceed in effectiveness those that are the result of advanced scientific development in nations that are unfriendly to our way of life.

Today there is pending before Maj. Gen. Lewis B. Hershey a case that I have brought to his attention where local and appeal boards, in New Jersey, have

turned a deaf ear to a request that would permit a student in advanced science to complete his course at a State university. The young man is a graduate of college and has now almost completed his advanced scientific course in pursuit of a doctor's degree. His studies up to this time have followed a course that is most necessary if we are to meet the challenge of other nations in such matters. I have purposely withheld details of his name, the name of the college at which he received his original degree, and the university he is now attending to attain his higher degree of doctor in his chosen scientific course. This boy is no slacker. He stands ready and willing to serve his time in the Army. He and his father, a distinguished Legionnaire of New Jersey, only ask that he be permitted to finish his final course that will take only a comparatively few more months of time, June 1957.

It is more important to our future security that this young man be permitted to finish his course of advanced scientific study, or, be sent into the Army at this time for the usual training process, that can include some duties not too important. That is the question that must be decided in this particular case.

During a visit to Soviet Russia and several of its satellite countries last fall I was astounded to learn of the extent to which Russia is preparing its students for scientific usefulness. Today, it is far ahead of us in this respect. Tomorrow, it will be so far ahead that it will create a situation that can be serious. This is a fast-moving world in the study of pure science as well as applied science. We cannot afford to lag behind.

In confirmation of this thought which I have expressed, I call the attention of my colleagues in the Congress, and all who are part and parcel of our Selective Service System, to an article that appears in the February 27, 1956, issue of the Des Moines Register by Marquis Childs in the form of an interview with former United States Senator William Benton, entitled "Soviets Train Scientists To Win Cold War." I commend it to the serious consideration of all who think in terms of the welfare of our Nation and its people. It reads as follows:

FORMER SENATOR WARNS—SOVIETS TRAIN SCIENTISTS TO WIN COLD WAR

(By Marquis Childs)

WASHINGTON, D. C.—A report based on firsthand observation adds another note of warning that education in the Soviet Union is far outstripping education in the United States.

The massive educational program still expanding in Russia, under which today nearly twice as many students are enrolled above the high-school level as in this country, is one reason for the extraordinary confidence expressed by Soviet leaders at the recent 20th congress of the Communist Party.

For as the latest warning, from former Senator William Benton, of Connecticut, makes clear, the Soviet educational system is geared to win the cold war.

SURPLUS OF ENGINEERS

Benton, who made an intensive study of Soviet education and propaganda last year, says that system is producing a surplus of engineers and technicians who will be assigned to carry out technical assistance in every uncommitted country of the world. While getting their scientific training, they are thoroughly indoctrinated in the Marxist-Leninist line.

There are schools—and this seems to have escaped the attention of even specialists whose business is to know what is going on in Russia—in which all the training from the first grade on is in English, French, or German. Graduates of these schools have a fluent working knowledge of the language they will need when they are sent abroad to do a technical—and propaganda—job.

RAPID EXPANSION

In a lengthy article for the Britannica Yearbook, of which he is publisher, Benton writes:

"The Soviets are now challenging us frontally at what have historically been two of our strongest points, technology and mass education.

"In less than 30 years the Soviets have created a primary school system rivaling our own in universality, with nearly 100 percent enrollment. Their secondary school system is mushrooming amazingly. By 1960 every Russian youngster is to be given an education at least comparable to a better high school diploma."

WARNING BY STRAUSS

Late last year, Admiral Lewis L. Strauss, chairman of the Atomic Energy Commission, said it was evident the United States was rapidly falling behind Soviet Russia in the training of scientists and technicians with the "certainty that we are turning out less than one-half the number of scientists and engineers we require."

The deficiency begins, according to Strauss, in the high schools where science training has long been inadequate and standards of science teaching dropping rapidly.

He cited the fact more than half of all American high schools fail to teach physics or chemistry.

In contrast, Benton points out that in the last years of secondary school, Soviet students must take 4 years of mathematics, including algebra, geometry, and trigonometry.

FEW ELECTIVES

Since the Soviet Union is a totalitarian state, the student has little choice once he has selected a specialty. Electives are few and far between. So-called cultural courses are held to a minimum.

The objective, it is hardly necessary to add, is a Communist education—that is, first-rate technical training buttressed by complete indoctrination in Communist dogma.

It is the combination of indoctrinated zeal with technical proficiency that is so ominous for the West.

Others say that while the threat of massive technical training is a real one, the very fact of advanced education in the scientific spirit will raise troubling doubts that will in turn, lead to a weakening of the support for the state. If this could happen, then an evolution away from totalitarianism and toward a genuine acceptance of peaceful coexistence might be possible.

SPECIAL ACADEMIES

In a recent speech, Benton proposed the creation of technical assistance academies similar to West Point and Annapolis where young men of superior intelligence would be trained as engineers and technicians in every field. In return for their free education, young men would agree to sign up for a certain number of years of service in America's technical assistance program overseas.

Short of some positive, constructive step such as this, the drift will continue. And if estimates of Soviet progress are even approximately right, the gap will widen and America will fall increasingly behind.

To permit this to happen is hardly less than an admission of defeat. For if we have learned nothing else in the atomic-electronic age, it is that the enginers and scientists of today win the battles of tomorrow.

The "Billy" Connery Story

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the very interesting story concerning the life of the late William Patrick Connery, Jr., who served as a Member of Congress from the Seventh Massachusetts District for many, many years.

He was highly respected, honored, and revered by everyone. In Congress he served on several important committees, and as chairman of the House Education and Labor Committee, he was instrumental into bringing to final passage the liberal labor legislation that is still on the statute books.

Since this story of our "Billy" Connery is most interesting, for the reason that it renews and refreshes our memory of the very high qualifications together with the outstanding prominence of our dear, beloved, genuine friend, and the excellent reputation that he attained as a public servant, I include it in the RECORD.

The story follows:

WILLIAM PATRICK CONNERY, JR.

A raw cold wind was blowing over the hill of the World War I veterans' lot in Pine Grove Cemetery on the day it was dedicated. It was November 11, 1922. It chilled the large group of veterans gathered there. Dressed in well-worn Army overcoats and overseas caps, or faded pea jackets and round sailor hats, they huddled together listening attentively to the speaker of the day. He was one of them, their buddy, whom they had elected to Congress 7 days before.

Standing at attention, roused by his stirring, short but dramatic speech, they thrilled to his closing words. With eyes turned toward the heavens he said, "To you who have given all for your country, I solemnly promise that I will never stop working for the care of physically or mentally disabled veterans, their widows and orphans, and for equitable, compensating rights due all veterans, who have honorably served their country, so help me God."

For over 15 years he was the greatest friend the veteran had in Congress. Death ceased his untiring work for them on June 15, 1937. It was fitting and commendable that only a few short hours after his death, his comrades of Post 6, American Legion, paid him the signal honor of giving the post his name, William Patrick Connery, Jr.

"Billy," as he was affectionately called by all who knew him, was born in Lynn, Mass., on August 24, 1888. He was the son of William P. Connery, Sr., and Mary Haven Connery, whose outstanding lives in the community were an example to their children. His father was mayor of Lynn from 1911 to 1913, and his excellent administration of city affairs is a matter of record.

Billy was educated in St. Mary's School, Lynn; Montreal College, Canada; and Holy Cross College, Worcester, Mass. From the latter institution of learning, he reveived an honorary master of arts degree while he was a Member of the Congress of the United States. He studied law at Georgetown University and passed the bar in Washington, D. C.

While at college he developed a flair for acting, no doubt inherited from his father, and while there chose acting as his profession. From 1909 to 1916 he toured the

country with George M. Cohan shows. He left the stage in 1916 to accept a position with the GE plant in East Boston.

Billy enlisted in the 101st Infantry at Camp McGuinness, Framingham, in August 1917 to be with his brother Larry. Larry had served with the famous 9th Regiment in 1916 on the Mexican border. The 9th known as the Fighting Irish, had been consolidated with the 5th Regiment into the 101st United States Infantry, and was preparing for overseas duty. It was a unit of the now famed Yankee Division.

Repeatedly refusing commissions, he served 19 months as a private in France, because he wished to be close to the common soldier. He took part in all the major operations, engagements, and battles of his regiment. Shortly before his return home, he was promoted to regimental color sergeant for meritorious service. He considered this the greatest honor he ever received, and he had many bestowed upon him. He was known throughout the Yankee Division as Cheerup Billy, fatherly adviser to all, comforter of the wounded and dying, courageous and brave under fire. General Edwards called him his Apostle of Cheer. Col. Edward L. Logan, his commanding officer, publicly referred to him as the most valuable man in the 101st Infantry.

A whole book could be written about his experiences during and immediately after World War I, when he spent so much time organizing veterans to form legion posts and speaking at their installations. His message was always the same, "Organize. Be united. Avoid pettiness and you will have strength."

He was a charter member of the Lynn Y. D. Club and was a principal speaker at the dedications of most parks and squares named for Lynn boys who died in the service. Always a guard or escort when the bodies of deceased veterans were returned to Lynn, he brought consolation to many Gold Star mothers who grew to love him.

Lack of space prevents a recounting of the work done by his buddies and Post 6 Drum Corps in electing him to Congress after a thrilling campaign. He never forgot them. A picture of the corps was on the wall behind his General Edwards.

Though huge in scope, he presented a simply worded program when he campaigned for Congress in 1922. It never changed over the years. It was "100 percent veteran, 100 percent labor, 100 percent justice for all the people all the time." No man ever lived up to campaign promises better than he.

It is important for our younger members to know that at that time the veterans' program was not as popular as it is today. In fact, in many areas it was decidedly unpopular. Many times Billy had to stand alone in his fights, deserted even by his comrades. Political expediency forced some to brush away care for the disabled, to forget the dollar per day paid to privates who came home to no jobs, but not Billy. It was simple to jump on the bandwagon during and after World War II because step by step most of the benefits in the GI bill of rights had been fought for by a game little fellow who made a promise on a cold day in 1922.

Criticized by newspapers, he was sarcastically referred to as the "Veterans' Santa Claus" and "Veterans' Robin Hood." He made one of his greatest speeches in Congress when the veterans were accused of selling their patriotism because they wanted a bonus.

Billy won the election by 7,000 votes. It was really a remarkable victory. In an interview the day after election, he gave credit to the veterans, their mothers, sisters, wives, and sweethearts who worked so hard for him. He was reelected seven times to Congress increasing his majority every election until the last one was over 20,000.

With Larry as his secretary, he arrived in Washington in March 1923, and was sworn in as a member of the 68th Congress. Harding was the President at that time. He was appointed to three committees. They were World War Veterans' Legislation, Labor, and Expenditures in the War Department. He was a member of the first two for his entire membership.

On March 23, 1923, Billy spent a whole day at the United States Veterans' Bureau discussing with Generals O'Ryan and Hines what could be done to improve and facilitate veterans' claims. Asking for helpful suggestions by mail from the Legion, Veterans of Foreign Wars, and Y. D. Clubs, he incorporated their suggestions and criticisms into a report which he personally presented to the Bureau head to work on.

On November 22, 1923, he appeared before the Senate Investigating Committee and flayed the treatment disabled veterans were receiving. Shortly after, the reorganization of the Veterans' Bureau became an order, and regional offices were established throughout the country. His battles in committee and on the floor of the House for the care of the disabled is a long glorious saga in the records of Congress. Unannounced visits to veterans hospitals was a frequent must on his list of duties. One day a week he set apart time to visit the wards at Walter Reed Hospital where he was greeted warmly by the boys.

His battle for a soldier's bonus, which he preferred to call adjusted compensation, was long and discouraging. Banging away in the Veterans' Committee hearings, he had to give and take to get different bills to the floor of the House. None of them ever completely satisfied him, but they were better than none.

Outlined in brief, the history of the bonus paid to World War I veterans runs as follows:

1. Bonus bill: Provided 20-year endowment policies. Vetoed by Coolidge, May 15, 1924. Reconsidered May 19, 1924.

2. Bonus loan bill: Increased amount veterans might borrow and reduced interest rate. Vetoed by Hoover, February 26, 1931. Reconsidered February 27, 1931.

3. Soldiers' bonus bill: Would have paid off veterans' compensation certificates: Vetoed by Roosevelt, May 22, 1935. Defeated May 23, 1935.

4. Soldiers' bonus bill: Made 9 year, 3 percent bonds redeemable on demand. Vetoed by Roosevelt, 1936. Reconsidered January 27, 1936.

Those 12 years brought him success on many bills in which he was vitally interested. Among them were the following:

Increased pensions to Civil and Spanish American War Vets.

Increased aid to widows and children.

Emergency Officers Relief Act.

Incorporation of Yeoman F into Naval Reserves.

Amendment to Johnson bill providing compensation for every disability up to January 1, 1930.

Increased appropriations for National Guard.

Pilgrimage bill provided trip to France for Gold Star mothers to visit graves of their sons.

When Roosevelt was elected President in 1932, Billy was the ranking Democrat on both the Veteran and Labor Committees. Realizing the veteran program was in full swing and could be left in the very capable hands of Rankin, of Mississippi, and Wright Patman, of Texas, he chose the chairmanship of the Labor Committee and put that committee on the map. More labor legislation was enacted during the 5 years he served as chairman than had been enacted for the preceding 150 years.

Long before the term "social justice" was used politically, Billy was working for constructive legislation to improve conditions for the masses of the people. Some of the quotations found in his earliest speeches in Congress were based on the famous encyclicals of Popes Leo XIII and Pius XI on labor. He knew both of them by heart and knew they embodied all that was right for all classes.

Before the NRA was written, the Connery 30-hour-week bill had been reported to Congress with provisions outlawing child labor, the yellow-dog contract, protecting right of labor to organize, and guaranteeing the right of collective bargaining to labor, by representatives of their own choosing. These provisions were all included in the NIRA as a result of his efforts.

He refused to introduce the CCC bill on the grounds it was like a wartime draft bill, and the $1-a-day pay was inadequate. His fight changed the bill and obtained concessions which protected the man under the United States Employees Compensation Act and made it voluntary enrollment. Had he been wholly successful the pay would have been $80 instead of $30 a month.

The Metcalf-Connery bill aimed to prevent all racketeering in building projects of the Government. It passed the House and Senat but was vetoed by President Hoover. It was designed to prevent kickbacks of pay and profiteering.

Billy led the fight providing every second ship be built in a Navy Yard.

He was credited with the success of the passage of the Railway Labor Pension bill which put 100,000 men to work within a year, and eliminated company unions on the railroad. He led the fight and won the restoration of pay to Government workers by having returned to them 10 percent of their 15-percent cut.

He secured an unanimous report on the Wagner Peyser bill from the Labor Committee which established United States Employment Service.

Three vital pieces of legislation were Billy's handiwork. The Wagner-Connery National Labor Relations Act was written and rewritten 14 times before it was presented and passed by Congress on July 5, 1935. It created a National Labor Relations Board with power to determine an appropriate collective bargaining unit, subject to elections they supervised at request of workers; to certify the duly chosen trade union; to take testimony about unfair employer practices and issue cease and desist orders.

His pet bill was the Connery 30-hour week bill. He presented it to Congress on January 9, 1935 as a relief for unemployment. It provided for a 6-hour day and a 5-day week. It extended to all forms of employment, including agricultural workers, domestics and employees subject to the Railway Labor Act. It empowered the President to impose an embargo, tax or quota system on imports of any foreign country, which by laboring long hours for low wages could undersell the goods produced by the United States. This bill was backed by John L. Lewis and the A. F. of L.

He was to realize his greatest ambition the day he died, his wage and hour bill for which he had been working for years would have been passed. It prohibited the use of child labor; created a labor standards board; banned use of professional strike breakers; required the payment of 50 percent more wages for overtime; established the procedure for collective bargaining in the industries and a plan for differentials that would equalize the wages in the South with those in the North. The present wage and hour bill was passed on June 25, 1938. It retained many of the original points, but eliminated the differential clause which would have been a boon to New England industries.

The first bill Billy presented to Congress was an old-age pension bill, which he coauthored with Senator Dill. It was vetoed by Coolidge. He continued to fight for old-age pensions, inserting his demands by amendments any place he could, hoping a bill would be passed. The social-security bill was written in his office and was passed

almost unanimously on August 14, 1935. It created a board to administer old-age benefits based on earnings before the age of 65; unemployment insurance, and grants to States to aid the needy, aged, blind, widows, etc.

The CONGRESSIONAL RECORDS from 1923 to 1937 will attest to the courage and fidelity with which he kept his campaign promises of 1922. In reviewing the memorial addresses by his many friends in Congress, for whom he held the greatest respect, it is remarkable to read so many times, allusions to him as lovable, a fair competitor, honest and above all a gentleman. The kind of person he was is best summed up in the words of his brother Larry who succeeded him in Congress. He wrote:

"Combine the simplicity of the really great, the wit and humor of the cultured Celt, a warm sympathy for the underprivileged, a huge capacity for making friends and keeping them, every quality necessary for leadership, with honesty, integrity, personality, and decency and you have a composite picture of Billy Connery. His greatest characteristic was his integrity. His word was his bond. He never hedged, evaded or ducked an issue in his life. He was scrupulously honest and completely sincere. Deeply religious, he lived religion instead of talking it. All kinds of honors were heaped upon him while he lived. He knew popularity as few men know it. With success mounting yearly, he never lost the underlying philosophy of his life. To quote Kipling, he 'could walk with kings yet keep the common touch.' He was 'Billy' to everyone who knew him."

He died suddenly on June 15, 1937, of coronary thrombosis, leaving his wife, Antoinette, and a little daughter Marie Therese, with his brother and sisters to mourn him. His funeral was the largest and most inspiring ever held in New England. Thousands filed into the State armory and at his home and lined the streets to view the funeral procession which was strictly military. The 101st Infantry marched as a unit and was followed by veteran groups from miles around. The Y. D. Club of Lynn formed an honor guard at his bier, from the time his body arrived at the South Station, where they took over from the Irish-American Veterans of Washington, D. C., until his burial on Saturday, June 19, 1937.

Hundreds of floral tributes, thousands of spiritual bouquets, telegrams, letters, and resolutions were sent to Mrs. Connery from Government officials, veterans, and friends.

From President Roosevelt came the following tribute: "In the untimely passing of Congressman Connery the Nation loses an able man and conscientious legislator whose service can ill be spared. An earnest champion of the rights of the underprivileged as chairman of the House Labor Committee, he literally wore himself out in his efforts to find in national legislation, a solution for an age-old problem which would be just and equitable to the rights of capital and labor."

Post 6 can rightly boast of a great name. It can be found also on the William P. Connery Junior Memorial School in West Lynn; Disabled American Veterans Post in Boston; a room at Walter Reed Hospital in Washington, D. C.; main avenue and auditorium at Camp Edwards; and has been recommended as the name for the West Roxbury Veterans Hospital, in a bill presented to Congress by our present Congressman THOMAS J. LANE, who has done such a splendid job in representing us in Washington.

In bringing to a close this very incomplete story of Billy's life, which was a happy, useful, active, and dynamic one, let us pause one minute in silent prayer, and meditate on the thought that, "To live in the hearts you left behind, is not to die."

How Some Countries Get Dollars—the U. S. A.: A Soft Touch

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am inserting an article which appeared in the National Review of January 25, 1956. It indicates how Tito and other countries have been able to work the United States for soft-touch gifts and loans:

Back in 1954, Marshal Tito had an inspiration.

The Yugoslav farmers were in revolt against his variety of communism and, to provide them with consumer goods, he had borrowed $30 million from the World Bank.

The World Bank officials told him the next step was to refund Yugoslavias' prewar debt and to borrow money in New York and London. So in March 1954, he opened negotiations with Yugoslavia's private foreign creditors, who told him to cut down the Yugoslav budget; which meant firing the jobholders who were the core of his political support.

Tito didn't dare fire them. Instead, he appealed to the United States Government for a handout. The State Department, in one of its periodical drives to save Italy from the Italian Communists, told Tito to help out by being handsome in the Trieste dispute—which he couldn't do without turning all Yugoslavs against himself. This was Tito's fix when his inspiration came.

Because Italy had a Communist problem, Italy had got American money. All countries with Communist problems got American money. So Tito—this was his inspiration—decided to be a problem himself.

Tito needed to flirt with Moscow; but if he tried flirting at a moment when he had been so clearly rejected by the United States, Moscow would demand his white uniform and medals. So he needed—as former Secretary Acheson used to put it—to deal from a situation of strength. Observe the ensuing sequence of events:

1954

December: Nehru agrees to a state visit from Tito. He and Nehru jointly announce they adhere to neither the Western Allies nor the Communists.

1955

February: En route from India, Tito stops in Egypt. He and Colonel Nasser have a secret conference.

May: On Tito's invitation, Bulganin and Khrushchev visit Belgrade. The United States Ambassador is hastily recalled to Washington.

July: The United States offers Tito increased military aid. Tito says the United States should just hand over the money and weapons.

September: Colonel Nasser invites Bulganin and Khrushchev to visit Egypt. The United States Ambassadors to all Near Eastern countries are summoned to a meeting.

December: The World Bank offers to finance the first stages of the $500 million Aswan Dam. Colonel Nasser says it ought to just hand the money over.

December: On Nehru's invitation, Bulganin and Khrushchev visit India.

1956

January: In his state of the Union message, Eisenhower asks Congress to increase the civilian foreign aid appropriation by $2.2 million and make the foreign-aid program permanent. Yugoslavia, India, and Egypt are unofficially mentioned as beneficiaries.

Tito is possibly driven by more than an honest greed for American dollars. To some students of communism his break with Moscow in 1948 was fraudulent; they believe that he is today Moscow's underground ally. Moscow itself takes the maneuvers of Tito, Nehru, and Nasser with deadly earnestness. Moscow is clearly out to strengthen the Communist position in India; to establish it in Egypt; and reestablish it in Yugoslavia. In this week's Third World War, Mr. Burnham touches on the inexplicable willingness of Washington to submit to Tito's gang blackmail. Here we merely want to pay tribute to Tito's wits and to one of the most elaborate and far-flung parlor charades ever enacted.

What the Middle East Means to the Free World

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. MULTER. Mr. Speaker, the Democratic Digest for March 1956 contains the following article on the meaning of the Middle East to the free world. The article, authored by Ralph McGill, has been condensed from the Atlanta Constitution. It is worthy of the attention of our colleagues:

TROUBLE IS ITS HISTORY: WHAT THE MIDDLE EAST MEANS TO THE FREE WORLD

(By Ralph McGill)

(Exodus 3: 8: "And I am come down to deliver them out of the hand of the Egyptians and to bring them up out of that land unto a good land and a large, a land flowing with milk and honey.")

Every day about 3 million barrels of crude oil flows from the deep-drilled wells beneath the desert sands of Saudi Arabia, Kuwait, and Iran alone * * * and there are many wells in other countries in the hot, historic, and ancient Arabian Peninsula.

Today it is the Russians who press it toward war. Their ultimate objective stands out sharply in the glare of the world's spotlight now held on the Middle East.

That objective is—control of the oil and a Soviet hold on the Mediterranean. The former is a relatively new target. The latter is as old as the tsars. They maintained, for centuries, an imperialistic drive for a port on the Mediterranean.

As we read early in Exodus * * * there had been a war. The Hebrews, one of many Semitic tribes, had been captured in war, and taken prisoner into Egypt where they had been put at forced labor. Obviously, from "The Book," this war had taken place many years before.

The point is that as the curtain lifts on the first misty scenes in recorded history there was fighting in the Middle East.

It was then, as now, a land bridge between Asia, Africa, and Europe.

The German kaisers, dreaming of conquest, covered it with a phrase, "Drang Nacht

Osten"—drive to the east. They went in for aiding in the construction of railroads. They almost pulled it off, too, when the first great World War flamed. Out of it came the legends of "Lawrence of Arabia," the great Englishman whose diplomacy and organization managed to thwart the Turks and the Germans in their drive for conquest.

General Allenby marched British troops into Jerusalem, his head bare out of respect to the Christian significance of the city. He ended Turkish rule. It had endured for centuries, sapping the vitality and character of the people, and reducing the land to more of a desert than when they came.

Hitler made a determined drive for the "land bridge," knowing that he who controlled it would own Africa. Rommel, the Desert Fox, and his battle-tough Afrika Corps came perilously near to plucking the plum. Destiny, in the form of an angular, egotistical, able general called Montgomery and his Desert Rats frustrated Hitler.

Now, come the Russians. They do not march. Instead, they provide arms to a restless Egypt, held by a second-generation dictatorship which long ago ate the first of its litter—General Naguib. They agitate Syria, where another uneasy military dictatorship holds on. Transjordan, too, has a small, good army, bored with nothing to do.

France comes into the picture. She can claim existence as a power only because of her African holdings. Already, the best of these, in North Africa, is in danger of being lost.

So, Russia, without saying "forward march" to a single soldier, drives toward the great basin of oil, upsets the never very stable balance in the Arab world, and moves toward possible control of a great strategic area. It is vital to the free world. We will be drawn in—unless Egypt, Syria, Transjordan—and Israel—come to their senses.

Israel has brought long-needed Western democracy to the area. Arabia's once-rich culture, frozen at about the 13th century, has gone steadily down. Arab leaders since have debased and pitilessly exploited their own people.

But never for a moment think of this as merely a democratic David, with his slingshot out to face the Goliath of the Arab world. It is a great and terrible crisis. With North Africa gone, no beachhead could be held in Europe. If the ancient, historic "bridge" is lost to Russia, then indeed does the balance of power shift heavily to her side.

This is some of the meaning of "the Middle East."

The Leech Called Economic Aid

EXTENSION OF REMARKS
OF
HON. ROBERT T. ASHMORE
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. ASHMORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a composition by Mr. B. M. Gibson, one of my constituents. Mr. Gibson is a farmer, school teacher, and former member of the South Carolina Legislature and the South Carolina Employment Security Commission. In rhythmic form, he scathingly denounces Congress for illegally scattering the American dollar to the four corners of the world, including the lands of the Hindoos, Hottentots, and Eskimos.

He emphasizes the fact that we are spending ourselves into bankruptcy while the Kremlin laughs. Lenin said we would do just that. I agree with Mr. Gibson that we should use our brains more and our dollars less:

THE LEECH CALLED ECONOMIC AID
(By M. B. Gibson)

This thing called Economic Aid
Is a bald-faced illegal raid
Upon the people's pocketbooks—
Or that's the way, to me, it looks.

We John Does pay our taxes here,
Pay Uncle Samuel ev'ry year,
But where's the Frenchmen or Hindoo
Who pays the U. S. A. a sou?

Should Congress, then, tax you and me
And give away the "take" for free
To ev'ry country 'neath the stars,
Whose flag is not our stars and bars?

Congress, each poor taxpayer thinks
Such taxing puzzling as the Sphinx:
While sly Bulganin chuckles low
Each time you vote away our "dough."

Congress, eternally some say
You'll have to give our means away:
But don't usurp old Santa Claus—
Let him fill foreign maw and craws!

We have a quarter-trillion debt,
And yearly it's a-growing yet:
Why borrow, then, to give the world
Greenbacks like snowflakes random hurled?

The billions we give away each year,
What might they not accomplish here?
Yet Congress can't cut taxes now—
The voters, though, could tell them how!

They're planning now—I swear, by swan—
To build a dam they call "Aswan,"
A Nile job like a Pharaoh's dream—
Two billion bucks to dam one stream!

What mandate can our Congress boast
To treat our money like burnt toast?
I'm telling them, for me and you,
"Let Nehru oar his own canoe"!

No nation yet that e'er drew breath
Has taxed its people close to death,
Or thrown its bounty far away
In lands o'er which it owned no sway.

Sure as we ever conquer space,
The first space ship that makes the race
Will take some "Marshall Plan" to Mars
To gift wrap all the peopled stars!

Let Congress other nations treat
As does my banker down the street:
"I'll loan you, yes, but pay when due,
Or our old friendship, sir, is through."

Let Congress give no more away,
But hoard it for a sterner day.
Then Congressmen, when looking roun,'
Need fear no more Ben Franklin's frown.

Congress as soon could make hell heaven
As with our wealth uplift and leaven
The teeming East with moneyed yeast—
Taxpayers know that much, at least.

Congress, the noise outside your doors
Is not the ocean's cadenced roars—
It is the Nation's voice of wrath,
Bidding you choose a better path:

A path of oldtime commonsense,
Indexed with "billions for defense,
But not a dime to give away,
To friend or foe, till judgment day."

If such path's treason in this age,
Reread hist'ry's earlier page.
Then ask what our forbears would say
If they filled seats of State to-day.

Let queasy lands hold hands with Russia;
In time will fall their "House of Usher".
Why should we play Sir Galahad
And send good money after bad?

Congress, make our land strong and great—
That is your only high mandate.
Money no lands nor friends can buy.
So let your giveaway craze die.

Edward A. Dickson—Great Californian Passes

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. ENGLE. Mr. Speaker, I wish to place in the RECORD a news item appearing in the Sacramento Bee under date of February 22, 1956, relating to the passing of Mr. Edward A. Dickson, one of the outstanding citizens of California during the last half century. Mr. Dickson was a newspaperman, teacher, and public official vitally interested in the growth and welfare of California. At the time of his passing he was president of the board of regents of the University of California, and was known affectionately among his host of friends as the "father" of the University of California at Los Angeles. His departure is a real loss to the State of California and his leadership in local and statewide affairs will be sorely missed. The news item follows:

E. A. DICKSON, 76, LOS ANGELES CIVIC LEADER, UNIVERSITY OF CALIFORNIA REGENT DIES

Edward A. Dickson, whose career for more than half a century was interwoven with California's growth, died today in Los Angeles at the age of 76.

Dickson was a newspaperman, teacher, public official, political party worker, businessman, and leader of constructive activities of many civic and governmental groups.

He was active until his death as chairman of the board of regents of the University of California and president of the Western Federal Savings and Loan Association of Los Angeles.

He is survived by his wife, Wilhelmenia; nephew, Edward H. Dickson, Washington, D. C., correspondent for the McClatchy newspapers, and a great nephew, Samuel Edward Dickson.

WISCONSIN NATIVE

The elder Dickson was born in Sheboygan, Wis., and moved to California as a boy. He was graduated from the Sacramento High School and after graduation from the University of California at Berkeley in 1901 he went to Japan to teach school.

REPORTER TO OWNER

He began his newspaper career in San Francisco in 1903 and later was a Washington correspondent. He joined the Los Angeles Express as political and editorial writer and became editor and owner of the Express in 1919.

He left newspaper work in 1931 to become president of the savings and loan association.

FATHER OF UCLA

Dickson was known as the "father" of the University of California at Los Angeles.

When he was appointed to the UC board of regents in 1913 he was then the youngest man ever named and he was the first regent from southern California.

It was largely through his efforts that Los Angeles proper became the southern branch of the University of California in 1919. Dickson selected the Westwood campus site for the vast development into the modern UCLA. The school had an enrollment of 1,231 when it came into existence. Its current enrollment is 15,000.

Dickson told the story of the UCLA campus in his book, The University of California at Los Angeles, published last May.

The campus site Dickson selected was a 383-acre tract known as the John Wolfskill ranch. It was presented to the university as a gift from the cities of Los Angeles, Beverley Hills, Santa Monica, and Venice.

GIVES $230,000

Dickson gave the university $30,000 for graduate journalism fellowships and $200,000 for special professorships for distinguished scholars and scientists who have reached retirement age.

The latter fund was turned over to the University of California last month.

He also founded the Edward A. Dickson achievement award, an annual UCLA alumnus-of-the-year honor.

POLITICAL FIGURE

Dickson and Chester Rowell, then editor of the Fresno Republican, founded the Lincoln-Roosevelt League which played a prominent part in the Young Turks rebellion among California Republicans which led to the election of Hiram Johnson as Governor in 1911.

He managed or advised on successful reform campaigns for mayor against Southern Pacific Co. interests which resulted in Lincoln-Roosevelt League victories in Berkeley, Los Angeles and Sacramento.

Dickson was a confidant of Hiram Johnson until 1918 when Johnson was elected to the United States Senate and William D. Stephens, lieutenant governor became governor.

RIFT IS HEALED

A rift developed between Johnson and Dickson which was not healed until many years later at a chance meeting in the Nation's Capitol.

Dickson was with Johnson at the Pasadena Hotel when the so-called snub by Charles Evans Hughes of Johnson occurred during the 1916 presidential campaign.

In 1920 Dickson was one of the original backers of Herbert Hoover for president.

BROAD SERVICE

He served on the Los Angeles Water and Power Commission, the Los Angeles Centennial Commission, the Olympic Games Association, the Art Institute and Library Board and was president of the Historical Society of Southern California.

In 1017 and 1918 he was a member of the California State Council of Defense. He also was a California delegate to the Republican National Convention in 1932.

From 1918 to 1922 he was a member of the Republican State Central Committee.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate hearings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the official reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix, but this rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD Appendix the full report or print of any committee or subcommittee when said report or print has been previously printed.

10. *Official reporters.*—The official reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this restriction shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. The Public Printer or the official reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Illustrations.*—Pursuant to section 182b, title 44, United States Code (as shown above), requests for authority to insert an illustration in the RECORD should be submitted to the Joint Committee on Printing through the chairman of the Committee on Printing of the respective House in which the speech desired to be illustrated may be delivered. Illustrations shall not exceed in size a page of the RECORD and shall be linecuts only. Copy for illustrations must be furnished to the Public Printer not later than 12:30 o'clock p. m. of the day preceding publication.

13. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

Appendix

Free Enterprise and Small Business

EXTENSION OF REMARKS
OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 29, 1956

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Can Free Enterprise Survive Without Small Business?" The address was delivered last evening by Harold B. Wess, professor of business administration and marketing, School of Business Administration, American University, at the second Institute of Profitable Management for Small Business.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CAN FREE ENTERPRISE SURVIVE WITHOUT SMALL BUSINESS?

(By Harold B. Wess)

If and when small business disappears from our midst, then our free-enterprise society will be no more. I use "when" because I fear that unless appropriate action is taken, it is possible that small business will no longer be present, keeping our economic system healthy and dynamic.

How many big businesses that began as small businesses would have been able to grow and expand under our present tax structure? If Henry Ford had started his pioneering venture under the current tax system, would the Ford Motor Co. have reached its present size—would it be able to make its present contribution to a prosperous economy and to the economic well-being of our Nation?

Our present tax structure makes it difficult, if not impossible, for small and struggling business concerns to accumulate sufficient working capital to expand, purchase up-to-date fixtures and machinery, improve plants and stores, and hire additional labor.

Let us face it squarely. Small business, now as in the past, must depend on plowed-back earnings for working capital. Access to the capital markets and to the savings of investors by issuance of stocks and bonds is not available to small business. Small business must turn to commercial or bank credit and, more important, to previous earnings plowed back in the business, to meet financial requirements. Our taxing system makes it difficult for the small-business man to accumulate adequate profits to plow back into his business, credit is often not available when needed and, when available, the cost is high, and the open market for securities is largely closed to the small-business man. The usual result is undercapitalization. This means that with a slight economic squall, many a small-business man capsizes and then sinks.

There are more than three million small businesses in our economy. In discussing the place and problems of small business in our society and in paying tribute to the contribution of small business to our economy, let us not forget that big business is equally essential to our prosperity and high standard of living. We need both for a well balanced and soundly integrated free economy and free social climate. In this connection I quote Prof. J. D. Glover of the Harvard School of Business Administration from his book, the Attack on Big Business:

"Facts, it seems to me—teem about us on every side to attest the great contribution that big business has made to American life. Big business deserves much of the credit—not all by any means—for our unequaled technological advance and standard of living."

As to the claim of certain rabble rousers that big business is running the country, he has this to say:

"It seems to me that no reasonable man, looking objectively at the facts, can believe that big business runs the country, nor that it is pushing us, willy-nilly, into totalitarianism. In fact, it ought to be perfectly obvious that if there is any real threat of this sort, it comes from those who desire, by authoritarian political action—by the power, and ultimately by the force of the State—to remake the country to correspond to some fixed ideal of their own, or to push us back into some never-never Golden Age."

Much emphasis has been given to the high mortality rate of small business. Let us remember that bigness itself is no guaranty of survival. A study by the Brookings Institution showed that of the hundred largest corporations that existed in 1909 only 31 remained on the list in 1948. The rest either slid down the scale or went out of existence entirely. No company large or small has a permanent guaranty of survival. That is as it should be in a free society. In the last analysis a business, large or small, must serve the public or go under.

Why is maintaining the health, growth and survival of small enterprise vital to a better social and economic performance? The answer is implicit in our conception of free enterprise. Free enterprise makes available to individuals the opportunity to try their talents and abilities in new ventures. Private enterprise must provide these opportunities in order to retain its dynamism.

There must be opportunities for the rugged individual to attempt the new and untried. We must have a climate which make it possible for the newcomer to make a better start and with guidance and education, enable him to prosper and survive and become, perhaps, a medium and important middle-sized businessman. In order to make all this possible, we must provide a flexible business system where such attempts on the part of the individual will have a reasonable chance for success.

With over 3 million centers of business entrepreneurships and initiative we can have, and in fact must have, a dynamic society with millions of opportunities for new ideas, for trial and error, for daring ventures into the future. Newcomers force established businesses into alertness and efficiency. In this way they serve to keep the advantage of a competitive market open to the consumer.

It is to the best interest of big business to foster the success of small business, and to the best interest of us all. In recent years an attempt was made by the Federal Government to take over the steel industry. Let us hope that government ownership zealots do not come into power. Healthy small business makes this difficult. It is reassuring to contemplate that it is not simple for a government to take over several million small enterprises.

I am not suggesting that the Federal Government has no part to play in our private enterprise economy. What makes our society dynamic and vigorous instead of static and inflexible is the decentralization of authority and decision making, in contrast to a society under centralized direction and control. We have many governments and centers of activity and decision making. Labor unions, business associations, fraternal orders, clubs, churches, universities, professional organizations, the family unit, and many groups of farmers, adult study groups, town councils, etc., are all participating directly and indirectly in the government of our Nation.

We may best sum up the case for small business by quoting Dr. Harold W. Dodds, president of Princeton University:

"In an age of bigness there is need to preserve islands for the cultivation of the resources of smallness."

We know that many people by temperament and makeup will be happier and more effective in a business of their own. There are also many who should try their own wings before becoming part of a large organization.

Let us take a look at small businesses; how many are there, how do they perform, and what happens to them? There are 4,200,000 firms now in operation. Of this number, 75 percent have fewer than 4 paid employees. Less than one-tenth of 1 percent employ 1,000 or more people. More than three-fifths of the 4.2 million firms now active have been in operation by their present owners since the end of World War II. The median age of all operating business is nearly 7 years—that is half of the businesses are older than 7 years and half younger. Taking the business population as a whole (4.2 million), only 19 percent remained in operation under the same ownership for more than 10½ years, 54 percent survived 1½ years, and 25 percent survived 6 years. The chances are that about 1 out of 5 small businesses will attain the age of 10 years.

Not all businesses are liquidated because they are unprofitable, but a study made in 1946 disclosed that half of all liquidations and about one-fourth of all transfers were made either to avoid or minimize a loss.

Why do we have this high mortality rate among small businesses? Need this always be so? Such high mortality is sheer economic and social waste.

We know there are functions the small business can perform more economically than big business can. There is a need and a market for goods and services which a small enterprise is more flexible and qualified to achieve. The small-business man can give better personal service; he can meet the needs of his customer because he is closer to them; he can move faster than the big business. Small business can compete and capture a market in manufacturing, retailing, wholesaling, and services because of this personalized service—high in convenience, quality, specialization, and accommodation. Yet the small-business man usually gets into trouble because—

1. He tries to make limited capital stretch too far.
2. He handles his credits poorly.
3. He lets his inventories get out of hand, carrying too much slow-moving and dead stock instead of concentrating on fast-moving items.
4. He lacks training and preparation for his job.
5. He has little understanding of his market and the personal and physical equipment needed for success.
6. He lacks financial understanding, does not know how to determine the availability of funds and how to use them to the best advantage.
7. He has little or no recordkeeping and does not understand the accounting function.
8. He is so involved in the pressure of day-to-day details that he has no time to analyze his situation.
9. He fails to seek help from the outside.
10. He is frustrated by changing competitive conditions because of his inability to evaluate them and does not know how to cope with them.
11. He does not understand nor has he been trained in the art and science of management.

In addition to these handicaps, small businesses characteristically have insufficient working capital and therefore cannot afford to tie up this capital for any long time on improvement in plant and equipment.

The small owner must meet the same problems in the management of his business as his large competitor with this difference—he is the buyer, the seller, the financier, controller, recordkeeper, etc., all in one. Yet he must learn to appraise all of these functions himself as though he had delegated them to others. For these reasons he frequently needs outside qualified counsel to help with an objective examination of his operation and suggestions for improvements in areas where he is weak.

It is the duty of big business, of Government, and of educational institutions to encourage and help the rugged pioneering individuals who are ready and willing to take the risks of blazing new trails. Today, alas, there are too few young people willing to take the risks of going into a small business of their own. Witness how few are the young people who will go into selling as a career, and note that those who do, generally prefer the security of a straight salary rather than the hazard of a straight commission.

What can schools of business administration do to help small business? They can, in setting up their programs, bear in mind that the small-business man must have versatility. He cannot delegate to specialists jobs of finance, control, personnel, advertising, marketing, production, etc. He must be the specialist in all or many of these functions. Schools of business must therefore develop courses of instruction that will fill his needs for an overall expertness and skill peculiar to the requirements for a small enterprise.

Uppermost in everyone's mind is what will happen to small business under automation. It is encouraging to find Congressman WRIGHT PATMAN, chairman of the Subcommittee on Economic Stabilization, reporting to Senator PAUL H. DOUGLAS, chairman of the Joint Committee on the Economic Report, on November 25, 1955, that:

"Relatively small business may be in a position to turn its disadvantages into an element of strength by capitalizing upon its comparative adaptability and flexibility. While big business fights for mass markets, smaller business may capture the business left behind. While big business concentrates on mass assembly, the manufacture of components and parts—even the mass production of components—becomes the opportunity for small new enterprises. There is no doubt that the smaller plants will need to give especial study to product design and standardization problems in order to achieve longer product runs and secure the maximum benefits from automatic machinery.

"Small business unquestionably has its problems in the contest for survival. These include the terms of competition, the difficulty of securing sufficient capital, adequate management, and the problems of research and development. The trend toward automatic machinery may result in making these difficulties even greater, but it is far from clear that automation itself is going to add a wholly new and overwhelming set of survival problems of its own."

Small business is indispensable in a free enterprise economy. However, wholesale subsidizing of economic inefficiency and wasteful use of resources as a method of promoting the growth of small business will do only more harm to our economy, and, in the long run, will be a disservice to small business itself.

President Eisenhower in his economic message to Congress on January 24, 1956, said, "The lasting prosperity of our Nation depends far more on what individuals do for themselves than on what the Federal Government does or can do for them." Let us, therefore, turn our thoughts away from subsidies and artificial props to thoughts of how to help small business help itself.

Forced Repatriation

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. BOSCH. Mr. Speaker, the arguments for and against a committee to investigate forced repatriation of anti-Communists to Soviet Russia following World War II, House Resolution 137, continue.

Under leave to extend my remarks, I include two letters published in the New York Times on this subject which I commend to my colleagues for their attention.

The letters follow:

[From the New York Times of February 18, 1956]

INQUIRY ON WAR PRISONERS—CONGRESSIONAL INVESTIGATION INTO FORCED REPATRIATION OPPOSED

To the EDITOR OF THE NEW YORK TIMES:

Having served for 8 years at the Nuremberg War Crimes Trials and subsequently with the United States Army Historical Division, I was greatly interested in a letter from William F. Buckley, Jr., James Burnham and others, published on January 26, which advocates a congressional investigation of the forced repatriation of millions of anti-Communist prisoners of war between 1945 and 1947.

It is highly questionable if this action involved millions of prisoners. One would like to know the writers' source for this quite incredible figure. Moreover, contrary to what is alleged, this repatriation was clearly agreed upon between top-level Russian and Allied authorities at Yalta, Potsdam, and elsewhere.

At that time the prisoners in question were regarded quite unequivocally by both sides, Russian and Allied, as traitors and war criminals. It is a manifest distortion of history to invest them in retrospect with the status of political refugees.

Logically, an investigation of the kind sponsored by Congressman BOSCH would also have to inquire into the case of William Joyce ("Lord Haw Haw"), who was executed (on the basis of a technicality which was palpably a legal fiction) by the British as a traitor although he was a native-born American citizen who never became a British subject and subsequently, I believe, acquired German citizenship while serving as a Nazi broadcaster. Joyce's claim to the status of political refugee (which in all fairness should be allowed to work both ways) is certainly much better founded than that, for example, of the Soviet General Vlassov, who defected to the German side after his capture.

In my opinion, inquiries of the sort proposed by Congressman BOSCH, which quite unjustifiably seek to judge past events in the light of present political situations which were not anticipated at the time when they occurred, can serve no useful purpose. In effect, they constitute merely a modern version of the medieval bills of attainder.

I fully agree that there is much that is doubtful about our actions and policy in postwar Germany, but venture to recommend, as a more legitimate subject for investigation, the truly fantastic black market conditions which were allowed to prevail in Germany between 1945 and 1948. Anyone who personally experienced the "cigarette economy" of those days can only conclude that it was deliberately aided and abetted by United States occupation authorities on the highest level.

JOHN BARNARD ROBINSON.
NEW YORK, *February 2, 1956.*

[From the New York Times of February 25, 1956]

FORCED REPATRIATION—NO KNOWN AGREEMENTS MENTION USE OF FORCE, IT IS SAID

To the EDITOR OF THE NEW YORK TIMES:

The letter by John Barnard Robinson, published in The Times of February 18, adheres to the very popular misconception that forced repatriation of anti-Communist prisoners of war and liberated civilians was agreed upon by the Allies in Yalta, Potsdam and elsewhere.

This simply is not so. Neither the Yalta Agreement nor the Potsdam Declaration nor any other known diplomatic document contains even the slightest reference to the use of force in repatriating prisoners of war and civilians.

The chief historian of the American Army, in a special study of forced repatriation, has stated that it was purely the result of an unwarranted arbitrary interpretation of the Yalta Agreement by the Joint Chiefs of Staff.

The truth is that our own Department of State had informed the Soviet Government through the diplomatic note of February 1, 1945, that we could never forcibly repatriate those Soviet nationals captured in German uniforms—as for instance the Vlasov troops—because that would be a gross violation of the Geneva Convention. The Acting Secretary of State, Joseph C. Grew, wired our Secretary of State, then at Yalta, warning him against the conclusion of any agreement with the Soviets which could result in unlawful forced repatriation.

When Mr. Robinson asserts that Congressman BOSCH's proposal quite unjustifiably seeks "to judge past events in the light of present political situations which were not anticipated at the time when they occurred, he is wrong again. The task of statesmanship is to anticipate. As Mr. Truman's memoirs clearly show, he rather correctly anticipated Soviet attitudes in the postwar era. As far as forced repatriation to the Soviets was concerned, many prominent people had repeatedly and vigorously protested against this inhuman practice.

May I further remind Mr. Robinson that we forcibly repatriated many Soviet nationals who had heroically fought with our own troops against the Nazis in Italy? These Soviet nationals were by no stretch of the imagination prisoners of war and therefore not covered by the Yalta Agreement, no matter how wrongly our military authorities might have interpreted it. Their extradition was a crime, pure and simple. It should, of course, be included in any forthcoming congressional investigation.

JULIUS EPSTEIN.

NEW YORK, *February 20, 1956.*

New Jersey American Legion

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1956

Mr. WOLVERTON. Mr. Speaker, in accordance with an annual custom, Don Hart, of Bridgeton, N. J., as department commander of the American Legion of New Jersey, and his associated officers, held the 12th annual breakfast of the department at the Congressional Hotel. The purpose of this breakfast is to enable the department officials to present to the New Jersey Members of Congress the views of the department with reference to the matters affecting ex-servicemen in which the Legion is interested.

These meetings have been of great benefit to the congressional delegation. We look forward to the meeting each year. We hope they will continue.

In accordance with the consent granted, I am including as part of my remarks the following summary of remarks made by William G. McKinley, national executive committeeman, and Edmund G. Lyons, vice chairman of National Americanism Commission:

STATEMENT OF THE AMERICAN LEGION, DEPARTMENT OF NEW JERSEY, TO NEW JERSEY CONGRESSIONAL DELEGATION BREAKFAST, WEDNESDAY, FEBRUARY 29, 1956, BY WILLIAM G. MCKINLEY, NATIONAL EXECUTIVE COMMITTEEMAN, AND EDMUND G. LYONS, VICE CHAIRMAN, NATIONAL AMERICANISM COMMISSION

Gentlemen, for sake of brevity this statement is reduced to a minimum, so that "he who runs may read."

1. The problem of the consolidation of the Veterans' Administration outpatient clinic at Newark regional office with the facilities at East Orange Hospital is undergoing further study seeking to resolve the objective without loss of bed capacity at the hospital.

You will recall our suggestion last spring in this connection that consideration be given to providing an additional building on the East Orange Hospital grounds for the entire operations of the regional office.

Without detailed and specific recommendation, at this time, we would ask you to continue your interest in this problem to the end that proper appropriations be provided to secure a regional office building in East Orange and to finally dispose of the Newark property known as the Old Globe Indemnity Building.

The effect of this would be to realize a substantial money return to offset the cost of new construction, return the Newark property to the tax ratables of the city of Newark, and materially improve the services of the Veterans' Administration to New Jersey veterans.

2. Attention is invited to the reduction in requested appropriations for the overall operations of the Veterans' Administration by some $600 million for a total request of something less than $5 billion.

This reflects decreases due to termination of programs for certain veteran benefits and a leveling off of others.

Our comment on this fact is to point up a contradiction between reduced budget and continued propaganda of scare proportions that veterans' benefits are rising to threaten bankruptcy of the Federal Government.

We invite your attention to this error which could adversely influence congressional approach to veteran legislation by overemphasis of money values.

We believe that money for veteran programs although in large amount should be considered in ratio to overall budget. This is not a very great factor.

We believe that projection of future costs of veterans programs based upon veteran population is grossly distorted and is misleading. Any projection of veteran costs based upon veteran population needs to be in ratio to the overall of the population and therefore in ratio to the overall of national economy.

Unless war again visits us in the next 25 years, mortality, especially among older veterans, will tend to reduce the veteran population, while on the other hand, the Bureau of the Census foresees a population in excess of 228 million within 25 years. There would be normally a consequent increase in national wealth as the population increases.

Therefore, the ratio of veterans to population will decline and the ratio of veteran program costs to overall wealth will lessen.

We ask you to keep these facts in mind as you approach consideration of issues involving costs of veteran programs both now and in the future.

3. For your information and guide to consideration of Veterans' Administration appropriations as these effect New Jersey, you will be interested in the following:

Lyons Hospital has a capacity of 2,009 beds. As of now, 1,932 are occupied with 32 patients on leave for whom beds must be reserved. This is nearly total occupancy. There are some 676 applications awaiting admission, many of whom are in State and county institutions which, as you know are overcrowded.

These are neuropsychiatric cases. This condition is not only continuing but the case trend is rising.

East Orange Hospital has a total capacity of 950 beds, of which 850 are authorized for use and 740 beds have been budgeted.

As of now there are 788 patients in the hospital, an overload of budgeted beds.

There are 132 applications for admission. These are general medical and neurological cases.

The caseload is rising and is closely following our projections of caseload as given to you in previous reports.

We believe that there is a need to bring all the facilities of East Orange into full operation.

We repeat our previous statements to you that some expansion of neurological treatment is necessary and as a relief to Lyons Hospital.

We concede that this is a management and budgeting problem, technical in nature, but you should be informed of this problem and we ask your sympathetic concern and influence when considering appropriations in the field of hospital care.

H. R. 7886

4. The major legislation to be offered by the American Legion this year in the area of veterans benefits is embodied in H. R. 7886.

This legislation would liberalize existing pension entitlements to elderly veterans, predominantly of World War I.

It must be recognized that World War I veterans, now at average age 63 years, are being retired from the labor force of the Nation. This means substantial reductions in income to a very large proportion of these older men.

The problem is many sided and complex in detail. We do not have time for an involved discussion of it.

Let us say, however, this proposal is a carefully studied attempt to provide for older veterans in justice to them, in justice to our country, and in accord with long-established national tradition and custom. It seeks to avoid an overpensionizing of eligible veterans where there is no economic need but to lend aid and comfort to those veterans who actually need assistance in their declining years.

We ask your support of this bill.

5. You will be considering various bills prompted by the report of the Hoover Commission dealing with veterans' affairs.

We are opposed to many of these suggestions for adequate reasons. To save time, we will provide to you an exhaustive study by our national organization which we hope will be helpful to you.

We ask you to sustain us in our position concerning these matters.

May I yield at this time to Edmund G. Lyons, of Clifton, past department commander and vice chairman of our National Americanism Commission, who will discuss our views concerning matters in the field of Americanism.

IMMIGRATION AND NATIONALITY ACT

The American Legion continues its firm support of the McCarran-Walter Immigration and Nationality Act and is opposed to weakening amendments or any attempt to repeal this act. As a result of this legislation enforcement procedures have been strengthened in order to cope more adequately with the threat of subversive penetration. Loopholes and inconsistencies in the old immigration laws have been eliminated. We now have for the first time in our history a sound immigration and nationality system.

Some of the proposed changes recently made would result in a 2½ times increase in our existing immigration figures. We doubt if the economy of our country could stand this influx.

We would oppose any attempt to eliminate the fingerprinting of immigrants. Representative of over 20 million men who served in the Armed Forces, who were not only fingerprinted upon entry into service but also fingerprinted every time we drew our pay, I'm sure you can see our position on this matter.

TAX-EXEMPT FOUNDATION

We believe that a continuing study should be made of tax-exempt foundations. The American Legion is not opposed to the creation of such organizations, but is deeply concerned with the activities engaged in by some foundations and the purposes and causes promoted by grants from organizations receiving special consideration under our tax laws.

FEDERAL AID TO EDUCATION

The education of the youth of the United States has been a matter of deep interest and continuous study to the American Legion since its organization in 1919. In 1921 the American Legion, together with the National Educational Association, initiated American

Educational Week. We are still actively associated with this project. At the present time we are sponsoring and promoting some 18 programs in the primary and secondary schools of this country. These programs in no way substitute for the existing programs being carried on by school authorities, but, where we are invited, we supplement their programs.

With the exception of certain programs now in existence, such as ROTC, land-grant assistance, donation of surplus Federal commodities for school-lunch programs, and grants in aid in critical national defense areas, the American Legion is opposed to any form of Federal aid that would reach down into our communities for the purpose of school construction or other form of school aid.

Two recent studies by intergovernmental committees have declared that the State and local communities have the capacity to meet the financial requirements for education.

UNESCO

At our recent convention in Miami the American Legion requested Congress to make a complete current investigation into the operations of UNESCO to determine whether that agency is complying with the terms and conditions of House Resolution 215 and Senate Resolution 122, 79th Congress, said resolution being the basis of United States participation in UNESCO, particularly the final portion of said resolution, which states, "*Provided, however,* That such agency shall not interfere with educational systems or programs within the several States or their administration."

Since UNESCO is prohibited from operating within the United States by law, the American Legion requests that Congress repeal the laws creating the United States National Commission for UNESCO and its secretariat.

The following is a list of some of the persons attending the breakfast:

TWELFTH ANNUAL BREAKFAST, THE AMERICAN LEGION, DEPARTMENT OF NEW JERSEY, FOR NEW JERSEY MEMBERS OF CONGRESS, PRESIDENTIAL ROOM, HOTEL CONGRESSIONAL, WASHINGTON, D. C., FEBRUARY 29, 1956

GUEST LIST

United States Senators

Hon. H. ALEXANDER SMITH, Republican, Princeton.

Hon. CLIFFORD P. CASE, Republican, Rahway.

United States Congressman

Hon. CHARLES A. WOLVERTON, First District, Republican, Merchantville.

Hon. T. MILLET HAND, Second District, Republican, Camp May City.

Hon. JAMES C. AUCHINCLOSS, Third District, Republican, Rumson.

Hon. FRANK THOMPSON, JR., Fourth District, Democrat, Trenton.

Hon. PETER FRELINGHUYSEN, JR., Fifth District, Republican, Morristown.

Hon. HARRISON A. WILLIAMS, JR., Sixth District, Democrat, Plainfield.

Hon. WILLIAM B. WIDNALL, Seventh District, Republican, Saddle River.

Hon. GORDON CANFIELD, Eighth District, Republican, Paterson.

Hon. FRANK C. OSMERS, Ninth District, Republican, Haworth.

Hon. PETER R. RODINO, JR., 10th District, Democrat, Newark.

Hon. HUGH ADDONIZIO, 11th District, Democrat, Newark.

Hon. ROBERT W. KEAN, 12th District, Republican, Livingston.

Hon. ALFRED W. SIEMINSKI, 13th District, Democrat, Jersey City.

Hon. T. JAMES TUMULTY, 14th District, Democrat, Jersey City.

Albert B. Hermann, Administrative Assistant to Senator SMITH.

Albert E. Abrahams, Executive Secretary to Senator CASE.

Hon. Robert B. Meyner, Governor of New Jersey.

Mr. Harvey V. Higley, Administrator of Veterans' Affairs, Veterans' Administration.

Mr. Joseph F. O'Hern, manager, VA Regional Office, Newark, N. J.

Col. Salvatore A. Bontempo, director, State Division of Veterans' Services.

Mr. Albert H. Acken, secretary, New Jersey State Chamber of Commerce.

Maj. Gen. Donald W. McGowan, Chief, Army Division, National Guard Bureau.

Mr. Wallace S. Moreland, director of public relations, Rutgers University.

The American Legion—National

J. Addington Wagner, national commander, the American Legion.

James F. O'Neill, publisher, the American Legion magazine.

T. O. Kraabel, director, national rehabilitation commission.

Miles D. Kennedy, director, national legislative commission.

George J. Kelly, director, national public relations division.

Newspaper representatives

James Munn, Associated Press.

Edward K. Inman, editor, the National Tribune—Stars and Stripes.

Harold G. Stagg, senior editor, Army Times News Letter.

Arthur Sylvester, Newark Evening News.

Thomas Buchanan, Newark Star Ledger.

J. Newman Wright, Passaic Herald News.

Cyril J. O'Brien, the Trentonian.

Dean Dittmer, United Press.

American Legion Auxiliary—Department of New Jersey

Mrs. Howard Shuster, Nutley, department president.

Mrs. Harry Gleckner, Carteret, national executive committeewoman.

Mrs. Harry Kellerman, Weehawken, department secretary.

The American Legion—Department of New New Jersey

Don Hart, Bridgeton, department commander.

William G. McKinley, Jersey City, national executive committeeman.

Albert E. McCormick, Mountain Lakes, national alternate committeeman.

William F. Grund, Union City, director of service activities.

Morris W. Kuzbyt, Trenton, department adjutant.

C. Harold Saidt, Trenton, director of public relations.

Arthur W. Mazowiecki, Clifton, past department commander.

Raymond G. Clyons, Hoboken, past department commander.

William C. Doyle, Burlington, past department commander.

Edmund G. Lyons, Clifton, past department commander.

Halsey W. Stickel, Maplewood, past department commander.

Joseph G. Carty, Plainfield, past department commander.

W. Rex McCrosson, Palmyra, past department commander.

Edward Wysocki, Frenchtown, chairman, rehabilitation-hospital committee.

Harry N. Weeks, Jr., Belleville, chairman, department membership committee.

Vincent A. Maher, Ridgefield Park, national legislative advisory committee.

Russell M. Pike, Maywood, department rehabilitation-hospital committee.

Ralph A. D'Olivo, Morristown, chairman, department policy committee.

Bernard W. Maxwell, Wildwood, president, New Jersey American Legion Convention Corporation.

The Construction Job Ahead

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 29, 1956

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Lt. Gen. S. D. Sturgis, Jr., Chief of Engineers, United States Army, before the Associated General Contractors, New York, N. Y., February 14, 1956:

THE CONSTRUCTION JOB AHEAD

Standing before you gentlemen, who represent the greatest industry of the greatest Nation in world history, one cannot help marveling at the vitality of America. Each nation at one period or another seems to have some outstanding characteristic, some national genius—as the Germans, for example, have been preeminent in music, and the English in seamanship. I think there can be little doubt that the genius of America is for technology and notably the technology of construction. The magical growth of our Nation has been a triumph of construction—construction of transportation systems, of industries, of cities, and of other facilities of indescribable variety, at a rate and on a scale that can be recorded in statistics but scarcely comprehended. Through our construction as through nothing else, we have manifested the tremendous vitality released by our system of free enterprise and our democratic institutions.

The very zest of life for all members of the Corps of Engineers is the part we have been able to play in the vast drama of American construction. As planners and engineers for envisioning requirements and designing economical public works of great magnitude to meet those plans, we have been partners with the contractors of America in providing facilities basic to national growth. Some $7 billion worth of civil-works projects have already been put in place by this Army engineer-construction industry team. These projects help protect the Nation's teeming river valleys from floods, provide water-transportation facilities that carry a substantial portion of the Nation's commerce, give us a growing measure of control over the flow and stability of our rivers in all seasons, and make important contributions to the national supply of electric energy. We are continuing to build such projects at the rate of about half a billion dollars every year.

At the same time, the corps is the agency through which you contractors are building mighty defenses to help guard the Nation against the unprecedented threats and dangers of this age. Since the outbreak of the Korean campaign alone some $7½ billion worth of military construction has been placed by the corps, some of it here in the United States, much of it scattered about the globe from near the Equator to near the North Pole.

The momentum and magnitude of this worldwide construction program doubtless will continue well into the future as far as we can discern and estimate. The military-construction program launched in 1950 is still more than a billion dollars away from completion and there is a constant net increase in total requirements each year. In fact, I do not believe that our defenses will be permanently completed when this particular program is finished; in these fast-changing times, construction for defense is likely to be a continuing task. And the

civil-works construction job is growing, to our concern, faster than we are building under budgetary limits. For example, in 1927 our active backlog of work on authorized but uninitiated or uncompleted civil-works projects totaled less than half a billion dollars. But today it has doubled and even trebled decade after decade over 30 years, has reached the staggering current total of $9 billion, and is still growing. Thus our close team relationship is a historic, necessary element in national life—a basic manifestation of national vitality.

Statistics help us measure, but cannot describe, the importance of that relationship. Our joint responsibility to the Nation is big because it is vital. Every one of the projects in our $9 billion active civil-works backlog represents a need by some American community or region for basic resource development to protect or support its continued growth. More than that, each project included in this huge backlog represents the survival of the fittest—that is projects carefully screened by the Corps for economic and engineering soundness from an even greater total of $12.5 billion authorized program. And national defense continually confronts us with demands for not only more construction, but new and different construction.

Ever since Korea we of the Armed Forces have been associated with you in the task of building, big and fast—to outrace all actual and potential rivals. And 1 by 1 you have mastered increasingly difficult tasks, and have brought new dimensions to our previous conceptions of size and speed and economy in construction. Now together we must open still another range of dimension in construction skill—we must revise our previous conceptions of construction precision. And that involves unprecedented problems for contractors in building the base facilities for our preparedness needs.

Our technology seems to call for constantly increasing precision in almost every field of workmanship. Our instruments must be more and more refined; our tooling and gages must measure to finer fractions of a millimeter; our control over technical processes, whether it be the aiming of a long-range missile or the guiding of a cutting edge, must be far closer than human senses alone can govern. Vital processes absolutely depend upon our obtaining this precision. Now in military construction too, we have reached the point where unprecedented precision is becoming necessary to the utilization of advanced equipment and arms. Operations vital to the national security and possibly to national existence depend upon obtaining this precision.

The reason, of course, lies in the increasing complexity of military equipment. Many of our aircraft, for example, are so constructed that the crew sit far forward of the landing gear. On a "hot" landing, every dip and dump in the runway surface is magnified into a rocking motion of the plane at the very instant the pilot needs maximum control. Furthermore, to cut down weight, modern planes make heavy structural use of relatively flexible hollow aluminum tubing, so that the rocking motion is augmented by a whip-action effect. A pilot taxiing a plane at 100 miles an hour—and many of them land much faster than that—must endure plus or minus 2½ "G's" of pressure from the vibrations of his plane alone. It is no wonder that the Air Force wants to do everything possible to cut down causes of motion and vibration. Unevenness in runways can mean the repeated loss of valuable equipment and priceless lives of highly trained air crews.

The establishment of longitudinal and transverse gradients for finished airfield pavements are not alone sufficient to insure a profile satisfactory for safe operations of modern high speed aircraft. It has become necessary to exercise closer control during construction of these pavements. Ordinary commercial standards and practices will not do. It is not sufficient to require airfield finished surfaces to be constructed to the normal smoothness requirements of one-eighth inch when tested with 10-foot straight edge within the deviations from established grades permitted in superhighway construction. It has been found necessary to limit the rate and frequency of the small irregularities in pavement surfaces. We will be requiring paving contractors to construct the finished pavement surfaces at airfields paved with portland cement concrete and bituminous concrete to within one-fourth and one-half inch respectively of the established gradeline at any one point with the further restriction that the algebraic difference from the established gradeline at 2 successive points 100 feet apart do not exceed the deviation specified above. Smoothness requirements will be controlled to one-eighth inch of 10 feet straight edge. A super deluxe job of design and construction must be done on these projects in order to meet the increasing demands of modern aircraft. These stipulations are established based on actual requirements and vital need.

The requirement for supersmoothness in runway construction is something that has come to the fore within the past 2 years as new aircraft began to come under test. It was, therefore, almost impossible to anticipate from any construction viewpoint in the past. Hence, our Government must now bear extra expense, our pilots must run extra risks, and our airpower operate under extra handicaps, until we can improve our facilities to meet newly arisen requirements. as we build for the future, we must try to provide work that will hold up not only against present requirements but against possible developments to come. Hence, I believe that we are seeing the beginning of a trend toward greater precision which will extend to much of our military construction.

When we hear and read about the arms race and the competition for superiority in armament, virtually all the attention seems directed to the planes and weapons themselves; too often little or no early consideration has been given to the base requirements of these implements. But it is beginning to appear that we may soon reach, if we have not already reached, the point where our ability to put new types of aircraft and missiles into the air will be determined in large part by the ability of the American construction industry and your colleagues in related engineering fields to provide the necessary construction support. Rockets as well as aircraft are going to impose unprecedented problems upon you. To the extent that this trend develops, our race for supremacy in military technology is going to focus squarely upon the relative ability of you men to outbuild your counterparts in other lands in all ways.

While we continue to hear of Russian gains in the technology of production, I doubt very much that the Russians or anyone else can begin to match us in the field of construction. Personally, I think there is a very important lesson to be gained in this respect from how we procure defense construction in America. Recently the House Armed Services Committee complimented the Army's Corps of Engineers and the Navy's Bureau of Yards and Docks because, dollarwise, 83.5 percent of the Corps' contracts and 72.9 percent of the Bureau's contracts were entered into as a result of advertised open competitive bidding as compared with 5.81 percent of all other Department of Defense procurement.

Now I have heard justification for procurement by negotiation on the grounds that that is the only way you can get the right article and right price. This may well be so in the procurement of military hardware—but you can't get away from the fact that while the world, including our principal enemies, may be catching up with us on production, no one comes even close to touching us in speed and efficiency of construction. And, no one can convince me that the terrific competition in the construction industry isn't the real basis for our outstanding superiority internationally in the construction field.

I have heard some production men say that we should use more negotiated contracts in the field of construction. Admittedly it is not an easy task to write specifications that are sufficiently clear, comprehensive, and concise to permit competitive bidding. Moreover, it takes consummate skill and judgment to insure fairness to both the Government and to the industry as well as a willingness on the part of the Governmental construction agencies to accept increased vulnerability to public expression of criticism. But it can, and is, being done for construction and with transcendent results in our international competition situation.

It is not my business to advocate to you gentlemen that the Defense hardware program should or should not take a leaf out of construction's book in this respect, but I would like to say at this point that the construction industry could well take a great big wide leaf from the hardware manufacturer's books and bring about a better balance in the top level Defense management through the sponsorship of highly qualified construction men for high Defense Department positions. There are bankers, lawyers, engineers, and production men galore—the best America affords—among the high echelon of the Defense establishment, but there is a conspicuous scarcity of men whose backgrounds are primarily in the field of major construction. When you consider the big and vital part construction plays in defense these days, you must, inevitably ask yourself the question: What is the construction industry doing to carry its share of responsibility for giving this country the best guidance it can possibly muster for our defense?

Without discounting in the least the outstanding contributions made by veteran construction men, such as Mr. Roger W. Fulling, previously with DuPont, and now Director of Construction in the office of the Assistant Secretary of Defense for Properties and Installations, and perhaps a few others, let me emphatically say to you that from where I sit, it is obvious that we need more men with long construction experience in top positions of the Defense establishment. We need you to prevent fragmentation of engineering and construction agencies; we need you to introduce practical construction considerations into foreign treaties which impose an imbalance on construction economies and time as compared to alleviation of other tensions; we need you to devise means whereby a fair share of the better engineers and construction men serve with the Armed Forces both in military and civil status; we need you to synchronize priorities of construction materials needed to permit the construction of facilities to keep abreast of weapons being produced, because hardware is given high priority inconsistent with priorities given the construction which must support such weapons. I could enumerate many other important and allied reasons why, in my opinion, the Defense establishment needs the help of outstanding construction men in the several secretariats. I strongly suggest that the AGC look into this matter, verify what I have said, and raise volunteers as an act of patriotism in time of need.

Well, at any rate, we are going to keep the competition high in defense construction and so we are going to ask you to play a part that may well be decisive to the air and arms supremacy of America by giving us means

that no one else can surpass for putting new types of craft and missiles into operation.

Related to the requirement for precision is a trend toward greater quality in many types of construction besides pavements. When our country launched its vast military construction program immediately after the outbreak of the Korean campaign, the major emphasis was on getting the most construction possible at minimum cost. As we review our experience with that program, we find that in many cases this has resulted in high eventual charges for such items as maintenance, repair and replacement of facilities that are proving increasingly unsatisfactory. Today all of us concerned with military construction must, in my opinion, think of better facilities, rather than cheaper construction. We want to save money, but not at the expense of quality. When we build living quarters, for example, that are not of a quality conducive to encouraging men to remain in service, we save construction money but risk loss of what is far scarcer and more valuable—trained, experienced men. In short, we can now document from experience something that I think all of us knew in a general way all the time—that when carried beyond a certain point, few things are as costly as a cheap construction.

In saying this, I do not mean that we are not as eager for economy as we have ever been. The longer the present period of uncertainty, tension, and change lasts in the world, the greater will be the burdens piled upon our government and our people, and the more necessary will the strictest economy be. But I believe that economy is now being more realistically related to higher standards of quality and workmanship.

Military construction is not the only field in which developments of significance to the Corps' construction program have occurred during the past year.

The effects of this year's floods in New England and California are going to reverberate through the Corps of Engineers for a long time. The New England flood was one of the most destructive natural disasters in American history, involving damages estimated conservatively as between 600 and 700 millions of dollars. The California floods, though tragically costly in both life and property, proved less destructive—thanks in part to the Federal flood control structures and related structures, including those of the Corps of Engineers and the Bureau of Reclamation. Corps of Engineers' flood control structures, alone, prevented damage to the amount of $116 million. I am not going to dwell either upon the economic effects of the floods or upon the tragic loss of life and destruction they brought in their wake. But I would like to mention some of the preventive and remedial activities they evoked in the Federal Government.

In September 1950, the Congress passed Public Law 875 to provide "an orderly and continuous means of assistance by the Federal Government to the States and local governments in carrying out their responsibilities to alleviate suffering and damage resulting from major disasters * * *." In January 1953, President Eisenhower by Executive order delegated the administration of this law to the Federal Civil Defense Administrator, Mr. Val Peterson. The relief operation after the New England floods—which we called Operation Noah—provided the first large-scale test of this law in action and the first major test of the coordination of Army engineer operations under the civil-defense framework, which until then had been a subject of much discussion and paper planning but virtually no field demonstration. Under Operation Noah, the Corps of Engineers within a matter of hours was able to mobilize a staff of civilian and military experts drawn from all over the eastern half of the country and as far west as Omaha, Nebr. Within a very few days, the construction resources of the region had been put to work restoring communications and other basic services. At peak strength, 3,365 mechanics and 1,423 items of heavy equipment were working on the reconstruction mission of the Corps. By the beginning of last December contract obligations had reached about $15 million, more than a thousand contracts had been completed, restoration work had been completed in 202 localities and was in progress in 178 more, 72 bridges had been removed and 223 bridges had been replaced, 35 dams had been repaired, 99 water and sewer systems had been put back in operation, channel work had been done at 237 locations, and the Corps of Engineers' part of the flood-relief job was about 67 percent complete. These figures attest the tremendous job done by the contractors and constructors of the flood area, who tackled their relief tasks with a speed and energy and skill of which your whole profession may be extremely proud.

Now, as the clean-up continues, the Federal Civil Defense Administration, the Corps of Engineers, and the other Federal agencies upon which Civil Defense will call in case of emergency under Public Law 875, have been evaluating their Operation Noah experience with the view of working out more precise assignments and even better coordination of effort in case of future catastrophes in which the Corps might be called upon for assistance. These discussions are dealing with such matters as the setting up of operational plans in which the roles of local, State, and Federal bodies will be predetermined as far as possible, and the surveying of the construction and other resources that may be available to each. They should help to provide the people of the United States with something they have never had before—a nationwide rescue plan for application in case of emergency by governmental guidance and leadership of the construction industry.

Another significant development of the past year has been the increasing public concern over water resources, and particularly over the growing problem of municipal and industrial water supply. This concern was reflected in Congress, which authorized the starting or resumption of 102 new projects by the Corps of Engineers alone. These new projects, once launched, will continue in construction for a number of years. Furthermore, I feel that the launching of these projects may indicate the beginning of a trend which may continue into a period of acceleration in water-resources development. The need for such development has become impressive, as shown by our backlog of unbuilt civil-works projects, which I have previously mentioned, and there is every reason to believe that the people are becoming more and more alive to the need.

Although for 20 years—since 1936—we have been working under the flood control legislation enacted that year, there is no river basin in the Nation where the flood-control program is more than two-thirds complete. The terrible floods in the North Atlantic States, New England, and California have spurred the demand for protection not only in those regions but in every American river valley.

With the new starts provided this year, we are beginning work on projects needed to fill the main remaining gaps in our midcontinental trunk-line waterway system, constituted by the Mississippi system, but the development of many tributary and feeder lines into a true waterway network is hardly more than begun.

And the public is now becoming aware of a new facet to water-resources work—the fact that an assured, adequate supply of water for domestic and industrial use in our communities is absolutely necessary if our economy is to be sustained and further expanded. In fact, I believe that the constantly growing, inexorable nationwide demand for more and more water in the face of a constantly diminishing natural underground supply has now reached such proportions that the most critical single future water-resources problem facing the Nation is that of providing an assured adequate supply of water for domestic, industrial and other needs. The construction industry, though not as directly dependent on water supplies as many other industries, is nevertheless vitally affected by the problem, because water supply is becoming one of the main limiting factors which will impose ceilings on continued growth and building in many areas unless farsighted water supply programs are promptly undertaken. We have the estimate of the Paley Commission that no other single factor will be more important in determining the future locations of new industrial plants—and hence the centers of construction activity—than water supply.

It seems to me self-evident that an adequate water supply for the future will have to depend more and more upon the conservation of available surface water through the use of reservoirs constructed by the Federal Government, other governmental agencies, and private concerns. Primary responsibility for providing municipal and industrial water supply lies, and I believe should continue to lie, with the States and localities. But I also believe that the time has come for the consideration of legislation for Federal cooperation with State and local agencies in the solution of this problem—cooperation which can afford mutual economies and other advantages to both Federal and non-Federal interests. Whether or not such legislation is provided, I believe that water-supply projects will form an increasingly significant portion of the Nation's construction endeavors from now on.

Thus the teamwork and cooperation between the Corps of Engineers and the construction industry continues to play a most significant part in national life, whether in the support of national economy by basic civil-works developments, or in the protection of national existence by worldwide military construction. The preservation and perfection of our teamwork is a concern of utmost importance not only to ourselves, but, because of our vast joint responsibilities, to all the people of America.

And hence I am personally and officially gratified at the success of the task force meetings that have been held between representatives of your association and of the corps ever since 1949. The worth and success of these meetings is proven by the fact that they have continued and are increasingly productive. The suggestion of the AGC that they be held at the different divisional headquarters of the corps in rotation has proved a most happy one, and divisions that have not yet been visited are looking forward to their turns to become hosts. Although I have not been able to attend any of these divisional meetings personally, I attended the first meeting in Washintgon at your headquarters in June 1953, and I have followed their progress with interest and appreciation. Moreover, the corps was represented by the Deputy Chief of Engineers for Construction, Maj. Gen. Charles Holle, at the meeting in Washington last November at which the AGC group was headed by Mr. William DeButts.

We appreciate your continued support of the affiliated reserve units, including the support given by your magazine, the Constructor. We appreciate the fact you have given us that support not only during the exciting times of national emergency, but steadfastly through the ensuing years of cold war in which there is a natural tendency to let enthusiasm lapse and effort lag.

During this spring, some thousands of engineer troops that have been serving and training with the Air Force will be returned to Army control. A good many of them now are going to be trained here in the United States. These troops must be taught to con-

struct facilities and lay pavements adequate to support operations under combat conditions. That means that they cannot receive mere token training, but must obtain skill and practice by the actual construction of operation-worthy facilities.

I want to assure you, however, that our general policy will be, as always, to turn programed construction over to skilled and experienced constructors entitled to the work and able to perform it capably and economically—and I might add that the preponderance of it, dollarwise, will continue to be procured by competitive bidding. Of course, the Department of Defense directive and the Army regulations restricting the use of military construction units to projects that "clearly contribute to the training of the unit for the performance of its wartime mission" will be scrupulously observed, as they always have been. But these former Aviation Engineers were doing heavy construction in remote overseas islands or bases and they will be known as "heavy construtions battalions" under special technical supervision of the Chief of Engineers. They are D-Day units to be trained to a "T" for critically important defense missions for the Air Force and Army on the outbreak of an emergency. You gentlemen know that you can't train such a "storm unit" as I had in the Southwest Pacific by peeling potatoes or pouring sidewalks for the Service Club. There will be give of these units stationed across the southern part of the country, and I need and am fully counting on your support and cooperation in our assignment of proper training tasks to these ultra-important units.

In summary, it is apparent that the Army engineers and you American constructors are going to be working together for many years to come on jobs of increasing significance and difficulty, calling for the highest degree of mutual cooperation. We of the Army realize the problems involved in the tasks which confront us and the usual demands they impose upon you. If some of the demands of the Armed Forces seem extraordinary, it is only because the need is vital. We are counting on you to meet those demands. We on our part, in full understanding of the vital importance of your industry, will do everything in our power to help make our joint cooperation a mutually satisfactory, effective, smooth-working relationship.

For I believe that if we adhere to the tested and proven principles of competition and leadership—leadership to which you can contribute more and more as you play an increasing role in the actual guidance of Government and defense efforts—we can meet the Nation's need for greater precision, quality, economy, and fast-driving progress in all forms of construction enterprise. We can provide the Nation with the construction base it needs for meeting any kind of emergency and any kind of challenge, whether it be a challenge of nature or of international rivalry. I believe this, because I know the toughness, virility, and survival characteristics of American constructors, individually and collectively. You have never been beaten, and I know you will never allow yourselves to be beaten, in our field of national preeminence—construction technology.

Strength: The American Policy

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. PHILBIN. Mr. Speaker, the recent statement of Syngman Rhee brings impressively before us the anomalous and ridiculous situation now obtaining in Korea.

As President Rhee points out, the Korean truce was no sooner made than it was broken. Americans will ponder a long time, I am sure, before they can agree about many aspects of the Korean truce but they certainly are alarmed by what has transpired since —in flagrant, cynical, ruthless disregard for the peace agreement. The evidence before us shows that the Chinese Reds and the Communists generally have conspired, and are still conspiring in violation of the terms of the truce to strengthen their air installations and armed forces in North Korea.

That they are also conducting a widespread campaign of espionage and infiltration in South Korea, sheltered and protected by the so-called truce team comprised of nations that are identified with the Communist bloc and hostile to the free world, appears to be established by available reports and statements from responsible sources.

President Rhee has spoken with force, propriety, and obvious justification, and the facts he set forth in his speech are undeniable. Whoever thinks that it will be possible to placate and appease the vicious Communist conspiracy is suffering a palpable delusion since placation serves only to embolden the overt acts of the conspirators, and appeasement, like surrender to blackmail, only leads to further brazen and impossible demands.

Strength of attitude, backed up by strength of arms and spirit, and strength of purpose to face all necessary risks, must be a firm cornerstone of American policy toward the Communist world.

Statement of Hon. John W. McCormack, of Massachusetts, on the Announcement of the President

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. ALBERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of the Honorable JOHN W. MCCORMACK:

My guess for the past few months has been that the President would be a candidate. If he is a candidate, there is a deep obligation to our country that the people must consider. Even under conditions of peace, the work of the President is most trying. In these days of emergency, his responsibilities are magnified many times. One of the obligations of the people is to recognize that ours is a constitutional form of government, not a parliamentary or managerial one; that there is no substitute for the leadership of the President, particularly in the field of foreign affairs; that it is a 24-hour job and not a part time or limited or semirecreational one. While my guess has been that he would be a candidate, my individual opinion is that any man in his position, without regard to party, would exercise wise judgment in not being a candidate. For over and above the benefits to some members of his party in their campaigns for reelection, or even the Republican Party remaining in control of our Government, is a question of the national interest of our country. I doubt very much that if the President runs and is elected, that the responsible authorities of other free government will enter into any agreements in the field of international affairs that would be other than of a temporary nature from day to day or week to week. I doubt if they would enter into any long-term agreement. I realize he had a hard decision to make with the political and business pressures upon him, and while I respect his decision, nevertheless, from the angle of the country, I think his wise decision would have been not to be a candidate. Even as a candidate, and under the most favorable conditions to the Republican Party, I think he will not have more than a 50–50 chance of winning.

John Bond Trevor

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. JENKINS. Mr. Speaker, the people of our country have sustained an immeasurable loss in the death last week of Mr. John Bond Trevor.

Throughout his life Mr. Trevor's capacity for leadership of the highest order was demonstrated in many fields, and his profession, his community, and his country were enriched by it. He was a great patriot and zealously supported his country's authority and interests. To that end he played a leading role in developing the immigration quota system which was established in 1924. For many years Mr. Trevor figured prominently in various patriotic groups and was the prime mover in the formation of the American Coalition, an organization of patriotic groups which investigated what it believed to be Fascist and communistic activities in the United States.

His advice and counsel was sought after not only by Members of Congress and Government officials but by men in high positions throughout our great country.

Under leave to extend my remarks, I wish to have printed in the RECORD an article which appeared in the New York Times of February 21 concerning this great American, which is as follows:

John Bond Trevor, a frequent adviser to congressional committees and a long-time advocate of immigration restrictions, died yesterday afternoon after a long illness at his home, 11 East 91st Street. His age was 77.

Mr. Trevor, a lawyer and industrialist who took an active part in public affairs, helped to devise the national origins quota system of regulating immigration. This system was incorporated into the immigration law in 1924. Thereafter, Mr. Trevor was active in defending the law against frequent criticism.

Mr. Trevor was the son of the late John B. Trevor and his second wife, the former Emily Norwood. He was born in Yonkers on November 19, 1878, and traced his ancestry to Thomas Willett, a mayor of New York; William Floyd, a signer of the Declaration of Independence, and Col. Benjamin Tallmadge, a member of Washington's staff.

A 1902 graduate of Harvard College, Mr. Trevor received an M. A. degree from the university a year later. He entered Columbia Law School in 1903, was admitted to the New York bar in 1904 and received an LL. B. degree in 1906. In 1932 the University of Rochester conferred on him the honorary degree of doctor of laws.

GOT LEGION OF HONOR

Mr. Trevor was a veteran of World War I and was decorated by France with the Order of the Legion of Honor. After the armistice in 1918, he was put in charge of military intelligence here.

Upon his discharge from the Army in 1919 with the rank of captain, Mr. Trevor was appointed special deputy State attorney general to assist the joint legislative committee. The agency, the so-called Lusk committee, was set up to investigate subversive activity.

In 1920, Mr. Trevor was named associate counsel of the Senate Foreign Relations Committee to investigate Russian propaganda. The committee achieved the deportation of Luwig A. C. K. Martens, Soviet agent who tried to function as Ambassador without recognition.

Subsequently Mr. Trevor was influential in obtaining the adoption of the first immigration quota law and, in 1924, the permanent quota system. In 1927 he founded a citizens committee to defend the system.

HEADED AMERICAN COALITION

The committee developed into the American Coalition, an organization of patriotic societies. This group broadened its activities to include opposition to nazism, fascism, and communism. Mr. Trevor served many terms as its president until 1950. He actively opposed the recognition of the Soviet Union and sought alien registration, which was adopted during World War II.

Mr. Trevor was an active critic of the New Deal and an opponent of plans for world government or world federation. He made his views known by speeches at the New York Chamber of Commerce and through congressional testimony, newspaper articles, and books, and other activities.

The Sons of the American Revolution awarded to him its gold medal for Americanism in 1951.

Mr. Trevor served at various times as vice president of Paul Smith College of Arts and Sciences, as a trustee of the American Museum of Natural History and of New York University, and as commdoore of the St. Regis Yacht Club.

He is survived by his widow, the former Caroline Murray Wilmerding; 2 sons, John B. Trevor, Jr., and Bronson Trevor; and 5 grandchildren.

Power of Congress To Regulate Foreign Commerce

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. PHILBIN. Mr. Speaker, the recent State Department pamphlet on OTC tends, I think, to minimize the power proposed to be lodged in this organization designed to control international commerce.

The question, however, this Congress must decide is whether it proposes to surrender its control over the regulation of foreign commerce and place it in the hands of an international body. Under present articles of the OTC agreement, it appears that this organization is set up to exercise definite control and regulation over the flow of international trade and would give the State Department rather than Congress the power to agree to any new obligations sought to be imposed upon us restricting the constitutional power of Congress to regulate our trade.

Under the proposed plan upon approval by Congress the OTC would thus be empowered to exercise regulatory powers over our tariffs and foreign commerce, and Congress in that event will have surrendered one of its fundamental constitutional prerogatives and obligations.

The State Department has already agreed in the GATT convention to eliminate certain import quotas and not to establish others.

It has also made agreements concerning tariff rates at specified levels and to maintain certain items on the free list.

By this action the State Department is in effect exercising specific constitutional powers and duties of the Congress. If congressional powers are exercised by Congress in the future in the face of agreements already entered into by this Government, it will lay the Congress open to charges of breaking international agreements. It is my conviction that the Congress should carefully scan our entire foreign-trade relations with a view to retaining its historic control of foreign trade and commerce. Congress, not the State Department or any other agency, should continue to exercise its constitutional power and duty to regulate foreign commerce of the United States.

Hon. Abe Stark, President of the Council of the City of New York, Receives Awards of the Eloy Alfaro International Foundation of the Republic of Panama

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks, I insert the formal presentation speech of Mr. Herman A. Bayern, American provost, Eloy Alfaro International Foundation, given on Monday, July 18, 1955, at which time the Eloy Alfaro Grand Cross and citation were bestowed on the Honorable Abe Stark, president of the council of the city of New York, in his office at city hall; and I also insert the acceptance speech of President Stark:

Mr. BAYERN. I have the privilege, pleasure, and honor, President Stark, of conferring upon you the Eloy Alfaro Grand Cross and citation, by direction of the board of dignitaries of the Eloy Alfaro International Foundation. You are in very good company, in view of the fact that both former President Harry S. Truman and President Dwight D. Eisenhower have likewise been so honored by this famous foundation.

The foundation was established to further the political and moral values of the Americas by Gen. Eloy Alfaro, the Abraham Lincoln of Latin America, for whom the organization was named, and who, from 1895 to 1901 and from 1904 to 1911, was the President of the Republic of Ecuador.

Gen. Eloy Alfaro was known for his efforts to liberalize all countries of Latin America, and to improve educational standards and opportunities, both for the children and adults. On the political side, General Alfaro fought for liberty and American unity. He played a leading part in achieving the liberalization of oppressed Latin American nations and further cooperation among the countries of this hemisphere.

Furthermore, General Alfaro welded the factions of the Cuban Freedom Party together in December, 1895—3 years before the Spanish American War, when he publicly petitioned the Queen of Spain in a document demanding Cuban independence. In 1906, General Alfaro convened the International Congress in Mexico City, attended by representatives of Latin-American Nations, to discuss questions relating to progress and well being of the American states, based upon justice and fraternity under the public laws of the Americas.

Were General Alfaro alive today, he would be in the forefront of the fight to preserve for the Western Hemisphere the Pan American unity of freedom-loving people. He woud be a zealous supporter of the work and program of the United Nations, and he would leave no stone unturned to assure, for all the peoples of the world, that home and peace and good will to all men that is our common heritage from our common creator.

We are very fortunate, therefore, that we have a man of the stature of President Abe Stark, who is here to continue such ideals of democracy and in the belief that it was not from human hands but from the Great Creator that every man, woman and child inherits the inherent right of life, to human liberty, to happiness and equal opportunity. It is fortunate that the outstanding achievements and accomplishments of President Abe Stark are recorded for all the world to observe in a lifetime of service as a private and public spirited citizen, and as a public official in New York and throughout the Nation. We know of no one, who, by his public and private services, to mankind, has more fully and brilliantly earned this great honor.

A famous author, Mr. Ben Burroughs, must have had a vision of President Abe Stark when he wrote a sketch on The Richest Man. He said: "That the richest man in the world is He * * * Who has some one to love * * * A man who worships as he likes * * * and works for all he earns * * * a man who'll practice tolerance * * * and whose love of freedom burns * * * A man who is respected for * * * The goodness of his name * * * The one who lives an average life * * * without the quest for fame." Abe Stark is the personification of these attributes, which were so dear to General Eloy Alfaro during his lifetime.

In view of the foregoing, and in recognition as a leader of men and as a builder of boys, President Stark has demonstrated that success in private enterprise or in public affairs requires personal devotion, active intelligence and bold constructive vision, in our democratic society there will always be recognition afforded to men whose service is humanity and whose mission is mankind. President Abe Stark is New York City's outstanding example of a successful business executive in the field of public administration. Therefore, in recognition of his ex-

traordinary distinguished patriotic, philanthropic, religious and humanitarian services, it now gives me honor, happiness and personal pleasure to now carry the determination of the board of dignitaries into effect. I hereby present the Eloy Alfaro Grand Cross and citation of this famous foundation to President Abe Stark.

Mr. STARK. I am deeply grateful and greatly honored to receive the Grand Cross and citation of the Eloy Alfaro International Foundation of the Republic of Panama.

My appreciation is enhanced by the fact that while this beautiful presentation is being made, a conference of far-reaching magnitude is being held in Geneva by our leaders in their sincere endeavor to achieve a lasting peace.

General Alfaro, during his lifetime, and the Eloy Alfaro International Foundation have always striven to bring about better understanding among the people of the world, and to solidify the Americas.

I sincerely hope and pray that our leaders at Geneva will succeed in promoting the lasting peace, for which General Eloy Alfaro fought and died for in his efforts to bring about international accord. While liberty and freedom constitute the heritage of every American, nevertheless, we must ever be vigilant to preserve it and to protect it.

Please accept my sincere and grateful appreciation for this great honor bestowed upon me by the Board of Dignitaries of the Eloy Alfaro International Foundation. I shall always cherish it as a coveted memento and an inspiration to accelerate my efforts in behalf of the people of the city of New York, and our country. Thank you very much, and may God bring in our time peace on earth and good will to all men.

Brig. Gen. Carlos P. Romulo Recipient of World Brotherhood Award

EXTENSION OF REMARKS
OF

HON. HERBERT ZELENKO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 29, 1956

Mr. ZELENKO. Mr. Speaker, on February 20, 1956, under the auspices of World Brotherhood, Inc., Brig. Gen. Carlos P. Romulo, Philippine Ambassador to the United States and chairman of the Philippine delegation to the United Nations, was presented the first annual World Brotherhood Award for service to the human community. I am pleased to insert into the RECORD the address of General Romulo on that occasion:

My talk tonight has to do with various letters of the alphabet and the connection between those letters and the cause of human peace and freedom. Some of these letters are familiar, such as U. N., U. S. A., and U. S. S. R. Some are not so familiar but are rapidly becoming so. I refer in particular to IRBM, ICBM, and NW. What we do about these various letters, how we arrange them or rearrange them, will have more to do with the kind of lives we will live in the next decade or so than anything we may be doing as businessmen, or educators, or community leaders. Indeed, our decisions concerning the disposition of those letters may have a bearing on the question of human destiny.

IRBM stands for the intermediate range ballistic missile. ICBM stands for the intercontinental ballistic missile. NW stands for nuclear warfare. Put them all together and you have the triumph of hell on earth—made by man, directed by man, aimed at man.

The intermediate range ballistic missile is what the name implies—a device for carrying the hell bombs over fairly short areas—let us say, from any part of Europe to any other part of Europe. The intercontinental ballistic missile can carry the hell bombs from one continent to another. The ICBM has a range of 5,000 miles or more. If the polar route is used, there is no country in North America, Europe, or Asia that is not accessible to any other country on those three continents.

What speeds do the ballistic missiles attain? It is no military secret that they are faster by far than the speed of bullets. Faster, at least seven times faster, than the speed of sound. Faster, at least four times faster, than the revolution of the earth itself. The ICBM brings the United States and the U. S. S. R. within 20 minutes of each other. It also brings the human race within minutes of the kind of destiny that makes a man-fashioned farce of the gift of sacred life.

For neither is it any military secret that there is no real defense against the kind of war now impending. The interceptor system has yet to be devised that can adequately meet the threat of large numbers of these sleek engines streaking through space and carrying nuclear cargoes.

According to the best intelligence available, the ballistic missiles are now getting out of the experimental stage. According to the same intelligence, within 1 year sufficient numbers of these carriers will have been tested and ready for quantity production.

I have no way of knowing whether, as some reports have claimed, the United States is behind the U. S. S. R. in the development of these missiles. For the sake of the American people and of history itself, I hope and pray that it is not.

But let me make one thing clear. Even if, within a very short time, the free world were to catch up with and even pass the U. S. S. R. in its ICBM program, that by itself would not provide an adequate basis for world peace. For I believe that nothing is more dangerous or more insulting to the intelligence than the theory, which one often hears these days, that the peace we seek can be created out of mutual terror.

I believe in military preparedness. Make no mistake about that. I don't want the free world to fall behind in any single respect in terms of military strength. But it is a serious weakness to believe that military preparedness by itself can safeguard the cause of peace and civilization.

The only justification for armaments in a free society is to serve as the shield behind which we can press forward with the great ideas that can in time dispose of force itself.

Let me repeat: The world is perhaps 1 year away from a point of no return. At the end of that time, we will either have in being a fully functioning system of workable and enforceable control over the alphabet of the apocalypse, or we shall be locked into a period of sleepless waiting as the tensions and apprehensions mount toward their climax.

That is why I say that nothing is more irresponsible or more dangerous to the cause of human life on this planet than the notion that a system of mutual terror can give us peace. The very existence on either side of ultimate weapons places such a premium on surprise attack as to create trigger thoughts and trigger fingers. Terror makes for fear. Mutual terror makes for mutual fear.

Human life requires and deserves something more substantial than mutual fear and terror for its foundations.

I am sure I do not have to remind anyone that the ICBM and nuclear weapons do not exist in the best of all possible worlds. They exist in the context of national rivalries, in the context of basic national insecurity, in the context of a period of world revolution, in the context of aggression that has already taken place, in the context of powerful upheavals involving more than 1,300,000,000 human beings—more than half the human race—who are coming up out of more than a century of indignity but who are not quite certain where they should now go or what the light is that will guide them.

All these things are happening today. The notion that the main challenges and upheavals of our age can be kept free of explosions through a system of mutual terror is, again I say, not merely a thoughtless concept but an evil one. It is evil because it is morally repugnant. It is evil because it says in effect that man's destiny can only be shaped by and is dependent upon force. It represents, this incredible theory does, the ultimate attack on the affirmative nature of man—his ability to mobilize his intelligence, his spirituality, his imagination, and his courage for the attainment of great ends.

Ten years ago, when the United Nations Charter was being considered at San Francisco, my Government came to the conference with both hopes and apprehensions.

Our hopes were for a world in which the imagination and intelligence of man could be turned to the making of the finest age yet known in history. We felt that the same energies that had been demonstrated in war could be used in the conquest of scarcity and human misery. There was nothing beyond man's reach. He could reclaim the wastelands. He could tap the basic energy of the sun. He could turn to the seas for new sources of raw materials. He could liberate himself from drudgery. He could educate his children. He could embark on the vast adventure of self-fulfillment.

Our apprehensions were that very little of this promise might be realized because the nations at San Francisco would be so preoccupied with purely national problems that they wouldn't have time to lift their heads high enough in order to sniff the cool, brisk air of a new age. We were afraid that the nations were so locked in the past, so tied to outworn concepts of how best to achieve security, that they would repeat errors instead of learning from them.

And of all the obsolete concepts, none was greater or more damaging than the notion that we could avert another world war without world law. This was the idea that the United Nations could exist side by side with the kind of unfettered national sovereignty that made aggression possible and indeed inevitable.

I believed at San Francisco and still believe today that our best chance for peace—indeed, our only chance for peace—is by making of the United Nations an organization with powers adequate to prevent aggression, adequate to control civilization-smashing weapons, adequate to deal with the basic causes of war, adequate to raise the standard of world justice, adequate, finally, in terms of the human individual himself.

Please don't let me give you the impression that mine was the only government at San Francisco that expressed its hopes for a creative peace. Not for a second would I withhold credit from many of my colleagues whose hopes were no less real than my own, or whose apprehension were no less severe.

The inability of San Francisco to create a United Nations which could replace the world anarchy left by the Second World War can be traced, I believe, to the following reasons:

1. There was a strong conviction at San Francisco that the world's peoples were not yet sufficiently advanced in their thinking to support a world organization with adequate authority to make and enforce world law. My conviction then and now is that

the world's peoples will respond to inspired leadership precisely on questions of world law.

2. The United Nations created at San Francisco represented a solidification of the status quo existing at the end of the war. Peace was never really created at the end of the war; all the uncertainties, unresolved issues, and hanging questions were left as they were. The United Nations was superimposed on the existing complexities and tensions without any real authority to deal with them. The best the U. N. could do was to try to keep a very bad situation from becoming worse. But bad situations tend to get worse in the absence of proper plans or means to deal with them. The range of the U. N.'s effectiveness was thus limited to the juggling of explosive situations.

3. The implications of a two-power world were never fully appreciated at San Francisco. It was mistakenly assumed that the only thing required for peaceful relations between the United States and the U. S. S. R. was for both countries to live and let live. But the live-and-let-live theory had never worked in history whenever two powerful nations faced each other across a power vacuum. In 1945, the world between the United States and Soviet Russia represented such a vacuum. It was inevitable that each state would consider this vacuum in the light of its own ultimate security. The vacuum would be especially tempting to a country such as the U. S. S. R. with its powerful ideological drive and its historic ideological claims concerning world revolution. But even without respect to ideology, competition was inevitable in terms of the long-range security interests of both nations.

San Francisco never really faced up to this issue. The failure to do so took the form of easy rationalizations. It was said that if the United States and U. S. S. R. couldn't agree, then a stronger U. N. was impossible. And if they could agree, a stronger U. N. wasn't necessary.

If we are to accept this logic, then it would be equally logical to dispose of the United Nations altogether For if the peace is to be dependent on agreement between the giants, then why a U. N. in the first place? The only real justification for a U. N. is to define the rules of the game binding on all and transcending the interests of the individual nations. If each nation is to be allowed to define for itself its place in the international traffic pattern, anarchy results. Moreover, the very absence of workable world organization makes it necessary for each State to look after its own security. This means not only an armaments race but a competition for military bases, with jockeying for position and everything that goes with it. Therefore, a world organization has the job of eliminating this competition for security, by guaranteeing the territorial integrity of all nations, by defining a code for the proper behavior of those nations, and then making sure the code is enforced.

In short, it is precisely because there were competing ideologies in the world—precisely because there could be no fundamental agreement between the United States and the Soviet Union—that it became necessary for the world organization to interpose itself between the two, and substitute enforceable law for international drift and accident.

These, then, were the three principal reasons why the organization fashioned at San Francisco lacked the muscle and the mandate to fulfill the hopes of the world's peoples for an enforceable peace.

The obvious question, of course, to be asked is whether the U. S. S. R. would ever have agreed to binding commitments at San Francisco.

It is most probable that the Soviet would have promptly and vigorously objected. But I believe the goal should have been defined nevertheless. I believe, too, that the Soviet could not have afforded to have alientated itself from world public opinion on an issue clearly involving the welfare and safety of the world's peoples. I believe that a timetable for true world security, with a step-by-step long-range strengthening of the United Nations to achieve the necessary powers—I believe that this approach was at least worth the effort. This is what I mean when I say that the affirmative definition of necessary goals is where genuine security begins.

But all this is now behind us. Whatever went wrong at San Francisco or in the years that followed, we are confronted with the need to deal with the present.

Complex though the present situation may be, it is not beyond human comprehension or control. Certain facts cannot be disputed. Within a year—2 years at the most—the armaments race will reach its climax.

The time, therefore, to attempt to meet the problem is now.

I believe that the full General Assembly of the United Nations should consider this matter at its next general session. It should undertake the most thorough examination of all the implications of the ICBM in the context of developing world tensions. This issue should have right-of-way over all others.

The General Assembly can consider the fundamental problems concerned with the control of the planet-shattering weapons. When we do that, we will automatically be considering the control of war itself, for what is required to take care of the first will also take care of the second.

The U. N. must consider, in short, the big questions that will ultimately have to lead to a charter review conference—how to win the support of the overwhelming majority of the world's peoples for a United Nations with responsible authority; how to prevent aggression; how to deal with conspiracy on the world level; how to insure world justice; how to safeguard human existence.

The agenda is survival. And even as the debate begins, there is one measure that can be taken that can give point to the debate and conceivably win the world a little time. We can put knowlegde to work. The U. N. can take the initiative in bringing about a public accounting of armaments.

Knowledge about arms, universally held, could reduce unwarranted fears. It could warn of attack. It could provide a basis for control agreements among nations as the essential prelude to world arms laws. It could disclose violations of control agreements and laws. Knowledge about arms, universally held—this is what can be done now.

This is no substitute for the mutual inspection and control that must come. But as an essential step toward this goal, information becomes important. The pace of modern warfare is so swift that collection of warning information must be under U. N. control. for results must be fed directly to defensive and retaliatory forces.

Specifically, the U. N. should be able to undertake its own program to collect, evaluate, and disseminate to all member nations fullest information on world armaments. And national intelligence and inspection efforts must be fitted into a U. N. context.

First, a United Nations Arms Information Agency could immediately evaluate all publicly available data on the forces of each country and issue estimates of each nation's armaments. It is not generally recognized what reliable estimates can be made from published information. The work of private organizations which publish detailed data on the world's military forces can be cited as examples of what can be done with so-called open sources of information. Agencies of the U. N. already publish voluminous estimates of national economic resources. Should not the U. N. begin studies of national armaments with similar vigor?

In addition to open sources, arms information could be collected by the U. N. in other ways:

Any mutual inspection agreements between nations should provide that the U. N. receive copies of information gathered by participating nations. U. N. ground-inspection teams could supplement national inspectors at agreed control points, just as the U. N. is now doing in Korea and may soon do in Palestine.

Nations having aerial reconnaissance forces should be requested to place small units under the operational control of the U. N. agency, and arrangements could be made for the U. N. to take responsibility for aerial inspection of those areas of the world not covered by reciprocal national surveys.

The U. N. could participate in the earth-satellite program and other scientific efforts associated with the international geophysical year where such activities might develop opportunities to collect data on world military forces as well as scientific information. The U. N. should itself operate the reconnaissance satellites soon to encircle the earth.

The U. N. should call on individuals and private organizations throughout the world to cooperate directly in reporting arms information of all kinds. This focus for the loyalty of the world's peoples is a necessary part of any system to enforce subsequent arms agreements.

This proposal, therefore, calls for the U. N. to begin now to report regularly to the world on the development, testing, production, and possession of arms. Accurate, complete, and universally available arms data can soon become the basis for U. N.-sponsored effort to achieve world arms controls and reduction.

I am certain that no one will regard this proposal as an end in itself. The end, of course, can only be a United Nations wise enough and strong enough to bring to our planet a rule of law and justice. And justice involves not merely the careful and precise operation of legal machinery. It involves the passionate concern for the human individual, making life as meaningful and purposeful as the human potential will permit. For safety and security are not enough. The fulfillment of the human potential remains today, as it has always been, the main business of the human race.

Prayer for Peace Movement

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. PHILBIN. Mr. Speaker, the prayer-for-peace movement inaugurated several years ago by Hon. Herve J. L'Heureux, outstanding member of the United States Foreign Service and veteran of World War II, continues to grow and to spread throughout the world.

It is based on the efficacy of prayer in solving current international problems and would establish an international custom whereby all men, women, and children who believe in God "would pause for 1 minute in the midst of their daily tasks, at 12 o'clock noon each day and, raising their hearts and minds toward God, ask him to help us adjust our international differences to enable the nations of the world to secure an equitable and abiding peace.

Since it was established in 1948 this movement has made very impressive progress in many nations. Unique in the fact that it does not embrace any organizational form but merely promotes

and urges universal prayer, it is fully understandable that it should compel the interest and acceptance of very large numbers of people of all denominations who have basic faith in the Prince of Peace. The movement is all-embracing as to believers in the Almighty and is not confined to any sect, denomination, nation, or race.

Having served loyally and faithfully in our armed services, and so ably and efficiently in our Foreign Service, Mr. L'Heureux possesses a wealth of ability, knowledge, and experience to conduct this movement. All lovers of peace, and all believers in God, applaud him for his unselfish devotion to the best ideals of religion and democracy. That he, above all others, should have had the inspiration, the zeal, the idealism, and selflessness to join with his service comrades to initiate Prayers for Peace, compels our admiration and our own prayerful associations.

The lines are drawn in the fearful struggle between East and West, between atheism and faith in God, between despotism and freedom, between Red imperialism and democracy. For reasons that are inherent in the philosophy and strategy of Marxist communism the world is racing madly toward another welter of blood and destruction that threatens civilization. Up to this time, the instruments of enlightened mankind, argument, persuasion, diplomacy have failed to check this ghastly race. It may well be, as has often been the case in history, that prayer, faith, brotherhood, and good works may accomplish what statesmanship has failed to achieve.

If people everywhere, individually and collectively, could be persuaded to turn away from materialistic concepts and practices which have taken hold of much of the world and return to their basic belief in the omnipotence, goodness, and mercy of the Lord, the great problems which now confuse and enthrall most of mankind might be solved.

There is more than a ray of hope in the current world situation. Despite the ruthless Communist conspiracy, many good, sincere, devout people throughout this Nation and the world, still are possessed of religious faith and belief, still worship the Almighty and repose confidence in Him. Even in the great Soviet Empire, notwithstanding the antireligion and persecution practiced by Marxism, millions and millions of people still hold firm to their religious beliefs and challenge the infamous doctrine that religion is merely an opiate.

If prayers for peace could be spread throughout the world to reach into the hearts and minds of believers, a great chorus of prayers for peace would echo through the world and, in time, would soften and chasten those now engaged in spreading international hatred, promoting the fires of revolution and war.

Mr. L'Heureux and his group are making a noteworthy contribution to the cause of peace. They are entitled to the respect, the gratitude, the encouragement, and support of all who earnestly seek peace, believe in the power of the living God, and hold fast to the ideal of human freedom. If this movement continues, it could well bring mankind together in a great unity of faith, and open the door to universal peace, prosperity, and happiness for the world.

But the Law Requires It

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Honolulu Star-Bulletin of February 27, 1956:

BUT THE LAW REQUIRES IT

Two notable visitors to Hawaii recently have expressed amazement that the sugar and pineapple industries are negotiating for contracts with a union whose regional representative and spokesman has been convicted under the Smith Anti-Communist Act.

The union is the ILWU and the chief negotiator for it is Jack W. Hall, one of the "Hawaii Seven" convicted on June 19, 1953, in a Federal court trial here; convicted on the first ballot.

Representative FRANCIS E. WALTER, Pennsylvania, Democrat, was the first to draw attention to this situation. He said he will seek Federal action under a 1954 law to deny the union the services of the National Labor Relations Board so long as it continues to accept Communist leadership.

Secretary of Labor James P. Mitchell likewise was critical of the situation. He points out that action to correct is the responsibility of the Justice Department, and not his department.

Meanwhile some Democratic spokesmen here, conveniently ignoring the fact that it was Representative WALTER, a Democrat, who first raised the issue, are accusing Secretary Mitchell and Governor King of waving the Red flag because of their references to the local situation.

Industry representatives don't like it. But they are powerless to do other than they have been doing until the Federal Government moves in, as it has against the International Union of Mine, Mill, and Smelter Workers (independent) and the United Electrical Radio and Machine Workers, both ousted from the CIO at the same time the ILWU was because of alleged Communist domination.

In the preliminary legal skirmishing in the case of the miners' union, the Government has won every round. The next step is a hearing by the Subversive Activities Control Board.

Legal decisions in the case of the electricians also have gone against the union to date.

With the precedent of these two unions to guide it, the Federal Government could move against the ILWU.

Federal action to challenge the ILWU leadership has been too long delayed. Congressman WALTER, a Democrat, doesn't like it. Secretary Mitchell, a Republican, doesn't like it. We of Hawaii don't like it, either. But so long as the Federal law requires industry to bargain with union representatives who are chosen by union members, employers must accept such representatives. Sometimes that is fine; sometimes it isn't.

Why the Farmer Isn't Flourishing

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks, I include the following article in the CONGRESSIONAL RECORD. This article, by Russell Lord, entitled "Why the Farmer Isn't Flourishing," brings to mind some of the terrible things that happened to our agriculture before and during the depression years.

The Democratic administration succeeded after long years of struggle and fighting to get adequate and good legislation through both Houses. The present administration would like to have you forget all these trials and tribulations and sink down to a position of complacency and accept the program of Secretary of Agriculture Benson which cannot work, and would weaken and destroy the work so far accomplished by the preceding administration.

The article follows:

[From the Saturday Review of February 25, 1956]

WHY THE FARMER ISN'T FLOURISHING

"If a man were porter of hellgate," says the clown in Macbeth, "He should have old turning of the key. * * * Here's a farmer that hanged himself on the expectation of plenty; come in time; have napkins enough about you; here you'll sweat for't."

The jibe was probably an old one even then, as old as commercial agriculture. A big crop brought a low price. From lean yields the farmers were the first to eat and the first to profit. Historically, and for the long pull, the primary producers of food and fabric appear to thrive best in years of short supply, war, deprivation, and calamity. So it seems at least to the urban eye; and if in generally sunnier times of peace and plenty farmers are the first to go through the wringer of deflation, there is still a considerable tendency to let them sweat for it.

They sweated for it here in the 1920's. In the 12 long years from 1920 to 1932, farm foreclosures, normally 3 or 4 to the 1,000, went up to 30 foreclosures for every 1,000 farms; and more than a million farm families were dispossessed. Then everything went to smash, or just about. Between 1929 and 1935 employment in industry went down 37.5 percent; payrolls went down 58 percent. Prices paid farmers, already low, sank further. By 1932 farm buying power was down to only about 60 percent of what it was before the First World War.

This is remembered; and now that the some 22 million people who still depend directly upon farming for most of their living are again the first great occupational group to feel, quite sharply, the pinch of a postwar or interwar deflation, the enlarged and reassembled proposals of both moderates and liberals in both major parties are of a scope that would have seemed incredible in 1925.

The new books and pamphlet before me, I think it fair to designate as timed, entirely properly, to the approach of an election year. Murray R. Benedict's Can We Solve the Farm Problem? is subtitled "An Analysis of Federal Aid to Agriculture." It is a work of permanent value, historical in method, conservative in tone. The product of a group study

undertaken in 1951, the analysis is balanced in the final chapter by a critical composition of the whole Committee on Agricultural Policy, and some individual notes of protest. Examples of the latter:

"What about the 'surplus' of farm people? * * * What [other] jobs are available? What training will be needed? What help in moving and job hunting will be required?

"What is plainly needed is a program to improve diets and stimulate consumption both at home and abroad. We should be experimenting boldly with food stamps, with expanded school lunches, with better marketing devices, and with other methods to keep abundance from becoming a curse."

A like line of protest is more aggressively developed by Leon H. Keyserling and a study staff of the Conference on Economic Development. Their pamphlet, Full Prosperity for Agriculture, is an able and eloquent presentation of the liberal or leftward of moderate approach to full production and full employment. As more or less unreconstructed New Dealers, Mr. Keyserling and his associates regard present administration farm policies as negative, timid, and inhumane:

"Current farm policies stem from the thesis that the surpluses of farm commodities reflect surplus farm production plant; that the contrived deflation of farm income will reduce the farm plant and population; that less farm output will automatically raise farm prices and income; and that those forced out by the process will either land on their feet or have only their own inefficiency to blame if they land on their heads. * * * This is a sad throwback to the method by which other surpluses—including a labor surplus—were cured a generation ago. * * * The great progress of our general economy during the past quarter-century from boom and bust to improved stability, and from inhumanity to conscience, has rejected this mythology."

If there be campaign material in this for the year ahead it will center, I imagine, on the designation of farm deflation as contrived and in part effected by present elaborations of the governmental apparatus set up in the 1930's for farm relief. Can it be true that now, instead of simply plowing down every third row of cotton, we are contriving to plow every third little-farm family off the land and into the streets? I think not. I think that the initial Agricultural Adjustment Administration, for which I worked, was not contrived to strengthen the position of the "haves" among farmers and crowd out those of lesser means; but it probably did so unwittingly, by and large, and to that extent hastened accelerating forces of displacement. About one-fourth of our people were farming in 1930, as compared to one-third in 1915. Now only about one-sixth are farmers, and soon it will be one-tenth. Mechanization and high capital costs make this inevitable. It costs about as much now to buy and equip an adequate farm plant—$50,000 or more—in most parts of this country as it did to start a country bank a generation ago.

The years of our farm pioneering have not ended, but our initial and too brutal concept of soil-mining for insatiable markets has changed. American farmers take far better care of the land now than they did when the first farm programs started; and that is one clear gain. Another gain, not always as clearly discernible, lies in a growing recognition that surplus problems, both as to goods and jobs, are not simply economic problems; they are moral problems. And throughout the past third of a century, particularly, we have sought more strenuously, boldly, and ardently than any other people in history to modify and conduct the profit system so that a balanced abundance of farm products may be more decently maintained and shared.

Confusion on Middle East Is Blamed on Democrats

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. WIDNALL. Mr. Speaker, today's issue of the New York Herald Tribune carries an article by David Lawrence concerning the confused situation in the Middle East. I have asked permission to include this in the CONGRESSIONAL RECORD Appendix, because I believe it places in true perspective the recent testimony of Secretary of State Dulles before the Senate Foreign Relations Committee.

The article follows:

CONFUSION ON MIDDLE EAST IS BLAMED ON DEMOCRATS

(By David Lawrence)

WASHINGTON, February 28.—The United States and her allies are determined to preserve the territorial integrity of Israel and to use physical force if necessary to do it.

This is the big news of the Middle Eastern situation. It was made plain enough to the members of the Senate Foreign Relations Committee but, instead of recognizing its significance, some of the Democrats played a disgraceful game of politics and attempted to badger the Secretary of State. They preferred to give the Communist world the impression that American councils are divided, wavering, and without resoluteness.

There is a good chance of achieving peace in the Middle East if all Americans, irrespective of party, will get behind the policy laid down by the United States and her allies. This was first given public emphasis in a statement issued just after Prime Minister Eden visited President Eisenhower in Washington a few weeks ago. But the other day Secretary of State Dulles amplified it significantly to the Senate Foreign Relations Committee when he said:

"By our pledges, of the United Kingdom, France, and the United States, we have undertaken to stand ready to put our power behind a United Nations action to save Israel. After all, Israel is a creature of the United Nations. The armistices were negotiated by the United Nations. There is no country in the world which has as strong a call upon the United Nations as the State of Israel has, and we believe that if the members of the United Nations will put their strength behind the United Nations' action to save Israel, that is a far better assurance for Israel than if we get into an arms race, because any amount of arms which Israel can buy from the United States can be topped, like that, by more arms which the Soviet Union will plow into the situation, and you get into an arms race which Israel cannot possibly win, because Israel, with a population of about 1,700,000 and a very small area, cannot absorb arms comparable to what can be absorbed by the surrounding Arabs, with their capacity to absorb arms, now that they have access to the arsenals of the Soviet Union."

MORE IMPORTANT NEWS

This text should have been widely disseminated by all the press services. It was more important news than the picayunish and captious questions of Democrats seeking political publicity at the expense of their nation's interest.

For the American policy in the Middle East is firm and unequivocal. It proclaims that action will be taken either within or without the United Nations.

This could mean military force as a last resort and a blockade of the Middle East area by allied naval forces. But before such a contingency is ever reached, Mr. Dulles pointed out to the Senators, the lead would be taken by the United Nations, adding this important comment:

"Now, if that lead were balked by Soviet veto, then we would face another problem, either of going to the General Assembly and seeking action there, because you may recall that in 1950 there was adopted a so-called uniting-for-peace resolution, which provided that if there was a veto in the Security Council which prevented giving aid and assistance in the event of aggression, then a special meeting of the General Assembly could be called on 24-hours' notice to deal with the problem.

"So that there are various alternatives that we have in mind that might be availed of if there were aggression, and if there was a veto in the Security Council so it could not invoke assistance to the victim of aggression."

DISPUTE WITH DULLES

Notwithstanding this forthright expression of American policy—which should be a warning to Soviet Russia, too—certain Democratic Senators chose to belittle the efforts of the Secretary of State and argue with him on the intangible question of whether the Soviets are or are not changing their global policies and propaganda. It was an excursion into the realm of abstraction.

These tactics are the usual story of selfish partisanship taking hold, in a political year, above patriotism and the national interest. The opposition parties in the British and French Parliaments are afflicted with the same disease. Millions of American voters are to some extent to blame because they elected a Democratic Congress in 1954 and served notice that for 2 years at least there would be a divided Government.

It's a sad state of affairs to find so many of the Democrats playing politics with human tragedy. In the end they will succeed in encouraging the Communists to take chances in the Middle East, and the result might be war or a crisis that could easily bring on war. This is a time for forbearance and the avoidance of partisanship.

The Soil-Bank Plan

EXTENSION OF REMARKS
OF
HON. GEORGE H. CHRISTOPHER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. CHRISTOPHER. Mr. Speaker, the Senate is presently engaged in an extended debate on the farm bill, S. 3183. This bill was recently reported to the floor by the Committee on Agriculture and Forestry, of whom Senator ELLENDER is chairman. Many amendments will be offered to this bill on the floor, and no one can say definitely at this time just what the bill will look like when the Senate has finished its deliberations.

The bill as reported out by the Senate committee is a great improvement over the bill which contained nothing but the soil-bank provisions, because S. 3183 provides for price supports at 90 percent of parity for basic commodities during 1956 and 1957. And in addition, it gives a little much-needed relief to the hard-

pressed dairy farmer of this country by raising the support level of dairy products from the present 75 percent computed under the new formula to 80 percent computed under the old formula. Even these improvements leave much to be desired because the bill provides no relief whatsoever to the producers of beef, pork, poultry, fruit, and vegetables. Any sound legislation which will result in lifting agriculture out of the present depression and give farmers an income permitting them to pay their interest, taxes, operating costs, and still have anything approaching an American standard of living, must include an equalization payment direct to the producer, covering the difference between the price for which nonstorable commodities sell on the open market and 90 percent of parity. Anything less than the above is not approaching the problem in a realistic manner and will only result in failure to cure agriculture's greatest illness. There is no way to avoid the problem. Prices of farm products are too low. The farmer's share of the national income is too little. His share of the consumer's dollar is now less than 40 cents. Nothing but price supports will cure this situation.

The so-called soil bank has some merit as a conservation measure, but it will prove absolutely inadequate as a measure for restoring income and purchasing power to agriculture. The soil-bank measure, without adequate price supports, is much like a house without a foundation or a tractor without a motor.

The soil-bank plan is in two sections. The first section provides for the establishment of the soil bank which must be taken out of allotments; this is the acreage that will be retired for pay. The farmer will be required to enter into a contract with the Secretary covering, not less than a 3-year period and he will be required to establish the fact that he will be in control of this land for the duration of this contract. Most tenants operate under a year to year tenure, so this provision would make ineligible a tenant with only a 1-year lease, and might easily lead to the landlord pushing his tenants off the land and leasing to the Government whatever allotments he had. The ceiling on payments, as established in this bill, is $750 million per year, with 5 million farms in the United States, this would give an average payment of $150 per farm. It is true many farmers would get more than the $150 average—but that would also mean that many farmers would get much less than $150.

The soil bank would not release farmers from complying with their allotments because it is stated on page 7, beginning with line 15:

To be eligible for such compensation, the producer shall reduce his acreage of the commodity below his farm acreage allotments within such limits as the Secretary may prescribe.

Again on page 21, beginning with line 14:

No person shall be eligible for payments of compensation under this act with respect to any farm for any year, in which the acreage of any basic agricultural commodity exceeds the farm acreage allotment for that commodity under title 3, of the Agricultural Act of 1938, as amended.

So it is evident that the soil bank must be established out of allotments that are already so tight that it pinches. This provision is the same as the Holland amendment which Congress repealed last year; which simply means, if this bill is enacted as written, no farmer will be eligible for a payment under its provisions in any way—if he happens to overplant the acreage allotment on any crop.

The No. 2 soil bank provided for in this bill and referred to on page 16, as "Conservation reserve goal" is an acreage to be set aside and taken out of production by the farmer in addition to the soil bank which comes out of the farm allotments. The acreage taken out of his allotments, as well as the general acreage retired under the conservation goal, cannot be used during the life of the contract for any productive use whatsoever. The legislation provides that unless put under water—that means under dams, or set out in forest trees; it must have a cover of grass, and/or legumes established and maintained on this reserved acreage. Weeds must be kept mowed and brush controlled. No use can be made of the forage crop. It can neither be grazed, mowed for hay, nor can grass or legume seed be harvested from it. In most cases, it will need to be fenced to prevent grazing and the term of the contract proposed in the bill cannot be less—but may be more—than 3 years. The payment for this conservation acreage is limited to an average of $70 per farm per year, and must include the acreage assistance the Secretary would provide toward establishing and maintaining the cover on this land—the expense of fencing it, and so forth.

How long would a family-type farm survive on a little soil-bank payment if its operator must continue to sell the products of that farm at from 50 to 70 percent of parity, as he is doing in many cases today It should not be forgotten that the first year in which this administration and Secretary Benson began to administer agricultural programs, namely 1953, was the first time in 11 years that the average price paid to the producer for all food and fiber produced on American farms was less than 100 percent of parity. Our old farm programs, properly administered, held the price of farm products at or above parity for 11 years—but the sliding scale farm program adopted by this administration and its Secretary of Agriculture, reduced the American farmer to his present plight in a 3-year period. The Secretary is still fighting every proposal which would raise the farmer's income and restore his purchasing power.

What diversified farmer has any considerable acreage he can financially afford to take out of his present allotment for rent to the Federal Government? I am appending to these remarks an article appearing in the current issue of the Ozarks Mountaineer. This article was written by Fred V. Hinkle, president of the Missouri Farmers Association, stating his views on the agricultural situation. I commend the article to my colleagues for their reading and study. It follows:

FARM PROGRAM NO HELP TO REGION

(By Fred V. Heinkel, president of Missouri Farmers Association)

It is a far more simple matter to put ships in mothballs than it is farms.

The President has recommended a two-point soil-bank program. The first part is designed to take cropland out of production with the idea that our grain surpluses might disappear. The second part is aimed at taking marginal land out of production, and is a long-haul proposition. It would plant these marginal acres in trees or subject them to other conservation practices.

The President's message is encouraging in that he shows he realizes there is a farm depression and that the farmer's problems can be best solved by Government action. He stressed that Government should accept the responsibility.

The primary fault of the President's proposal is its failure to recognize the real farm problem. That problem is low income—not surpluses. By law the surpluses are insulated from the market and cannot be sold in this country for less than 105 percent of the support price plus storage charges.

The idea that if support prices are abandoned, the surplus will vanish, has found its way into the thinking of persons who have not checked the records.

During the twenties when general prosperity was at a high level, farm products brought less than a living wage to their producers. There were no support prices then, yet the ruinous prices were attributed to overproduction.

Sliding supports have aggravated the situation. In a desperate effort to meet increased expenses, farmers have worked harder and produced more. You never did hear of a farmer not planting his full quota of wheat just because support prices had dropped and his wheat was worth less than before.

The Salina (Kans.) Journal in an editorial stated: "In proposing the soil-bank program, the administration in effect has scuttled the flexible-support scheme—although it may not want to admit it. If the flexible scheme is not to be relied upon to reduce production, then the reason for lowering the loan price has ceased to exist. The immediate question is a subsidy for ailing agriculture. Considering the need, the subsidy might as well be adequate."

THE PRESIDENT'S SOIL-BANK PLAN DOESN'T HELP THE OZARKS

Is the soil-bank proposal adequate to help Ozark farmers? A reduction in grain acres certainly will not help milk prices.

Our Ozark farms are not much of a factor in creating the grain surpluses. About all the grain that is grown in this area is fed to livestock—in fact, it is necessary to ship in additional grain each year for feed purposes.

Instead of selling cash grain, most Ozark farmers market their row crops when they sell their hogs, milk, butterfat, beef cattle, poultry, eggs, lambs, and wool. The livestock farmer is "left out" so far as the soil-bank proposal is concerned. In Missouri between 70 and 75 percent of income from farm marketing is from livestock.

Most Ozark farms are family-size operations. If these small farmers are compelled to reduce present crop acres, they will not be able fully to utilize their time or their equipment. Both the farmer and his equipment will become partially unemployed.

Many young men get started in farming by the renter route. They purchase machinery and rent additional land until they can save enough money to purchase more acres. It is likely that 100 percent of the Government soil-bank payment would be more attractive to the landlord than 50 percent of the crop he would receive as rent. What will happen to our young people? We don't want them all to move to the cities.

Most of our surplus grain in Missouri is grown in the river and creek bottoms. If

this land is allowed to go unattended, the willows and cottonwoods will soon take over. In the Ozarks brush would be a problem. The land would have to be reclaimed before it could ever again be planted in crops. You cannot put farmland in mothballs, like you do tanks and battleships.

We agree with the President that the problems of our farmers are "of the utmost urgency." Drought conditions of the last few years have left few Ozark farmers in financial shape to face the decline in farm prices. This winter has been drier than 1930, 1934, and 1936—the years we associate with the Dust Bowl. It is time to get some cash in the hands of these people.

It has been proposed that the farmer be paid in certificates good for grain now in storage to compensate him for keeping acres out of production. This would not cut down on the amount of grain on the market. It would not help the price of wheat. The Government would dump some grain, but it would not help farm income.

I am convinced that the long-term conservation feature of the proposal has merit. But the marginal acres proposed to be taken out of production under this section are not much of a factor in creating our surpluses. Most farmers do have some land that would be suited for trees. Unfortunately, however, due to the advanced age of most of our farmers, they will never see trees they plant converted to timber. It might be better for the Government to purchase some of these marginal acres and place them under the management of the United States Forest Service. I believe, however, that in the not too distant future pulp mills will be built in the Ozarks, which will utilize the lower grades of timber in this area.

The main point is that the program does not meet the basic problem of Ozarks farmers—low income. If the farmer received parity prices for his milk, beef, hogs, wool, and grain crops, there would be little need for any of these nine proposals advocated by the President.

Lithuanian Independence Day

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following proclamation:

PROCLAMATION

STATE OF NEW YORK,
EXECUTIVE CHAMBER,
Albany.

On February 16, 38 years ago, the liberty-loving people of Lithuania joyously proclaimed themselves a free and independent republic.

For more than two decades, Lithuania stood as a bulwark of democracy until, in the name of liberation, it was overrun and forcibly incorporated under the totalitarian tyranny of Soviet communism. But the Lithuanians' love of liberty and democracy could not be extinguished—they burn as brightly as ever.

Americans of Lithuanian descent will celebrate again this year the anniversary of their nation's independence. They will again voice their sympathy for their enslaved countrymen and once more protest vehemently against the alien forces of darkness that have seized their homeland.

Sympathizing with the plight of Lithuania and other countries now suffering under foreign totalitarian rule, the people of New York welcome the opportunity to honor a freedom-loving people by joining in the observance of this anniversary.

Now, therefore, I, Averell Harriman, Governor of the State of New York, do hereby proclaim February 16, 1956, as Lithuanian Independence Day in the State of New York, and call upon all our people to join with fellow citizens of Lithuanian descent in hope and prayer that the liberty and independence of a brave people will soon be restored.

Given under my hand and the privy seal of the State at the capitol in the city of Albany this 15th day of February in the year of our Lord 1956.

AVERELL HARRIMAN.

By the Governor:

JONATHAN B. BINGHAM,
Secretary to the Governor.

Tell the Senator To Look Homeward

EXTENSION OF REMARKS
OF
HON. SAM COON
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. COON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include a column by Victor Riesel that appeared in many newspapers last Saturday. In view of the current interest in campaign contributions, this will throw a little more light on the subject.

The article follows:

TELL THE SENATOR TO LOOK HOMEWARD

(By Victor Riesel)

NEW YORK.—Junior Senator DICK NEUBERGER, of Oregon, is a courageous man. He wants the Government to give the Democrats and Republicans some $11 million each to fight one another in this presidential election. And he would pass a law banning large political contributions from unions and businesses.

I don't mean that it takes courage to ask the Government for $22 million. That could come out of the bird-watching division of the Fish and Wildlife Service.

Where this ex-newspaperman may find himself in trouble is in his reference to a $23,000 contribution to his campaign by labor. NEUBERGER called this and all other political gifts "evil."

He may yet get himself known as the man with the gray flannel tongue among the unions which support him.

NEUBERGER'S law would prohibit contributions of anything more than $100. It is presumed that this means direct or indirect contributions. For example, DICK NEUBERGER got $23,000 from unions in cash, but many times that in services.

Oregon unions mailed 98,000 letters supporting him in the critical senatorial campaign there in 1954.

They made 160,000 telephone calls getting voters to come out. They supplied and gassed up 100 cars.

They fed scores of volunteer workers. This comes to a neat bit of currency and a considerable political contribution, not to mention the size of the printing bills.

Now, if this friend of labor leaders across the land really means to push a law banning sizable contributions, he would have to try to include these indirect outlays.

If this were possible, it could cripple much of labor's political action. Most of it is based on indirect gifts of manpower, publicity, and air waves time—not on financial gifts.

These make for a powerful machine, which can never be outlawed. Its opponents can only build one to compete with it.

There is, for example, the most effective of all labor political action operations—run by Walter Reuther and his United Automobile Workers.

This union now is the landlord of a building occupied by Chrysler officials, and the structure gets into this piece by way of being one of the indirect contributions to labor's political action.

The UAW recently purchased the offices from Chrysler, which gets out in June. Then the building will be turned into an air-conditioned labor college, which will be compulsory for all union staff members.

It will graduate a brilliant corps of regional officials, for they will be especially trained in every bit of union activity.

Every staffer will get a rounded education in everything from automation to legal action. But at least one expert in each subject from each region will be developed so that every section of the land will have a squad of men who are tops in their lines.

This will make quite a team. And, most certainly, there will be a political expert among them, which won't, of course, preclude any of the others from being politically trained too.

In each campaign, this team of experts will find itself lending its talents to the local union's candidates. This is legal. There is no way to stop it. Nor is there any way to count its cost.

But it certainly is a political contribution to the candidates, indirect as it is.

This will be just part of the UAW's political activity. The entire union is geared to such action, especially for the presidential campaign. Every congressional district will have a special congressional chairman, running a special congressional campaign organization. All directed quite brightly by union people.

If this is the kind of large campaign contributions the Oregon Senator wants to outlaw, he'll lose his friends inside labor. If these aren't what he has in mind, he's really finessing the Senate.

Colorado River Storage Project Would Help, Not Harm, United States Uranium Development

EXTENSION OF REMARKS
OF
HON. E. KEITH THOMSON
OF WYOMING
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. THOMSON of Wyoming. Mr. Speaker, it has been charged that the reservoir to be created by impounding water behind Glen Canyon Dam would flood out rich deposits of uranium and make them inaccessible.

This is just another of the series of fantastic statements that have been circulated by southern California opponents of the Colorado River storage project in their frantic attempt to discredit this great development. This has been clear from the fact that new, and increasingly ridiculous, charges have been raised each time a previous one is disproved. This talk of flooding important

uranium deposits is the latest of this series of trumped-up issues.

To set the record entirely straight on this matter, the question was put to the United States Atomic Energy Commission. The Commission's reply was sent to the Honorable CLINTON P. ANDERSON, United States Senator from New Mexico, and chairman of the Joint Committee on Atomic Energy.

Mr. Speaker, I request unanimous consent to insert this letter in the CONGRESSIONAL RECORD as an extension of my remarks:

UNITED STATES
ATOMIC ENERGY COMMISSION,
Washington, D. C., February 14, 1956.

Hon. CLINTON P. ANDERSON,
United States Senate.

DEAR SENATOR ANDERSON: This is in reference to a recent telephone request from your office for information concerning the possible effect upon uranium mining and milling operations of the proposed Glen Canyon Dam, a unit of the Colorado River storage project.

Our replies to your specific questions in this regard are set forth below:

1. A geologic study of the reservoir area, including both air and ground reconnaissance, is progressing and it is anticipated that this work will be completed by late summer. Based upon present knowledge, no appreciable amount of commercial grade uranium or other radioactive ore would be inundated by the reservoir to be formed by the proposed Glen Canyon Dam.

2. With the possible exception of a small inactive pilot plant located at Hite, Utah, no presently constructed uranium ore processing plant or pilot plant would be impaired by the reservoir behind the proposed Glen Canyon Dam. The pilot plant at Hite, designed to treat 30 to 40 tons of ore per day was built by Vanadium Corporation of America in 1949. This plant has not operated for several years and it is our understanding that it is partially dismantled.

3. An additional supply of power in the area, if tied into existing transmission lines, would be helpful to the uranium mining and milling industry. It would protect against power shortages and also would provide for the requirements of expanded operations. The question of bringing power to individual mining operations is dependent largely upon cost of transmission. Installation cost of feeder lines to individual mines is often prohibitive because of the small power load. Many areas of concentrated operations already are supplied by private and cooperative public utility organizations.

Sincerely yours,

JESSE C. JOHNSON,
Director, Division of Raw Materials.

Economic Justice

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 29, 1956

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able address entitled "Economic Justice" delivered by the Senator from Ohio [Mr. BRICKER] at a meeting of the Pennsylvania Manufacturers' Association held at Philadelphia on February 28, 1956.

There being no objection, address was ordered to be printed in the RECORD, as follows:

ECONOMIC JUSTICE

(Address by Senator JOHN W. BRICKER before the Pennsylvania Manufacturers' Association at Philadelphia, February 28, 1956)

"Justice," said Disraeli, "is truth in action." Justice—rendering to a person that which is rightfully his—is mankind's noblest ideal. As the preamble to the Constitution and the pledge of allegiance to the flag make clear, justice is the core of our political creed.

Tonight I want to talk to you about a particular kind of justice—economic justice. What is it? How is it endangered? How can businessmen help to preserve it?

Of all the facets of justice, the economic side of it has suffered the greatest distortion. Concepts of legal and social justice seem to be more widely and better understood.

Four or five years ago a top economic planner in the Truman administration proudly announced that the Government was giving the people $19 billion more, after taxes, than the year before. That was a most revealing statement. It reflected a belief, perhaps subconscious, that the Government has some paramount right to 100 percent of the national income. The producers of that income were expected to thank the Government for its generosity in distributing the fruits of their labor. A greater inversion of economic justice is hard to imagine.

In a similar vein, President Truman said in campaign speeches in 1952 that farmers and wage earners would be ungrateful if they did not vote to keep the Democrat Party in power. A majority of voters refused to swallow this theory. They were swayed by nonmaterial considerations: A bloody, stalemated war in Korea; softness toward communism in the top echelons of Government; bungling in foreign affairs; and corruption spreading like cancer throughout the executive branch. The majority of voters were influenced, too, by the administration's perverted sense of economic justice, the most dramatic revelation of which was the seizure of the steel industry.

Today the political situation is reversed. We have a changed administration. We must stand on our record. I hope that no Republican, by exaggerating the economic achievements of this administration, will subvert the ideal of economic justice.

Even labor bosses concede, albeit grudgingly, that America is enjoying an era of unparalleled prosperity. These are the incontestable facts supporting that conclusion:

Gross national product approaching $400 billion.

Personal income of $306 billion.

New construction at the annual rate of $41.8 billion.

Sixty-five million Americans gainfully employed.

These are all-time economic records. For this economic progress the Republican administration may claim some credit. However, I hope that Republicans will not try to claim sole credit for these economic gains. I hope that no Republican candidate will claim that his party created 65 million jobs; or that it is giving the people personal income, after taxes, in the amount of $272 billion. What better way to promote Communist and socialist ends than by asserting that our jobs and our earnings spring from the wisdom and benevolence of Government?

Economic justice is merely the policy of recognizing that every man is entitled to the things that are his own—freedom to do the work for which he is best suited; compensation commensurate with his talents and contributions to society; and unmolested enjoyment of the fruits of his industry, provided, of course, that he does not trespass upon the economic rights of others. Since men are not equal in energy, intelligence, and frugality, it necessarily follows that identical economic rewards to all would be unjust. Shakespeare knew the tragic consequences of obliterating rational distinctions among men:

"O, when degree is shak'd,
Which is the ladder to all high designs,
Then enterprise is sick!
* * * * *
"Take but degree away, untune that string,
And hark what discord follows!
* * * * *
"Force should be right; or rather, right and wrong
(Between whose endless jar justice resides)
Should lose their names, and so should justice too.
Then everything includes itself in power,
Power into will, will into appetite;
And appetite, an universal wolf,
So doubly seconded with will and power,
Must make perforce an universal prey,
And last eat up himself."

—*Troilus and Cressida, act I, scene 3.*

Although this administration cannot honestly file a political patent on our current prosperity, it can point with pride to fostering economic justice. By promoting economic justice, this administration created the favorable climate in which the energies and ingenuity of millions of American farmers, businessmen, and workers in industry were released. They, not the public officials in Washington, rewrote the economic record books. However, a Republican administration, with the aid of conservative Democrats in Congress, helped materially by eliminating or alleviating economic injustice. These were the major examples of economic injustice existing just prior to the election of President Eisenhower:

Federal taxes at confiscatory levels.

Deficit spending at the rate of $10 billion a year.

Stifling wage and price controls on the economy.

Galloping inflation at the rate of 6 percent a year.

Growing Government competition with private business.

In just 3 short years this is what the administration and a cooperative Congress have achieved:

Taxes have been cut. A comprehensive revision of the Internal Revenue Code has encouraged risk-taking in job-creating ventures. I hope that it may soon be possible, and without impairing the national defense effort, to make a further reduction in taxes.

We have a balanced budget. The President has submitted a balanced budget for the next fiscal year as well. Only once during 20 years of Democratic rule was a balanced budget achieved.

Inflation has been halted. A dollar saved in January 1953 is worth a dollar today. A dollar saved in 1942 was worth only 61 cents 10 years later.

Nothing, however, is more unjust than Government interference with the free market economy. Such interference may take the form of direct economic controls or Government competition with private business enterprises. Even after direct controls were ended, 12 of the 15 Senators on the Banking and Currency Committee, myself not included, were anxious to give the President standby price and wage control authority. President Eisenhower threw cold water on this idea. For the first time in many years a President spurned a proposed grant of power. By way of eliminating unfair Government competition with private business, 24 synthetic rubber plants have been sold; the Inland Waterways Corporation has been sold; and the Defense Department has withdrawn from such commercial activities as coffee roasting, ice-cream making, tree growing, and rope manufacturing.

On the question of a free and competitive market economy, no compromise is possible.

Of course, there must be some degree of Government regulation, as for example, to prevent fraud. In addition, the Federal Government's purchasing programs and its monetary, credit, and fiscal policies must necessarily exert considerable influence on the market. The crucial question, however, is who makes the major economic decisions: all the people in their capacity as consumers or a bureaucratic clique? In my judgment, Max Eastman did not exaggerate when he wrote in his book, Reflections on the Failure of Socialism:

"Mankind is confronted with a choice between 2 and only 2 business systems—a choice which involves the fate of democratic civilization. We can choose a system in which the amount and kind of goods produced is determined by the impersonal mechanism of the market, issuing its decrees in the form of fluctuating prices. Or we can choose a system in which this is determined by commands issuing from a personal authority backed by armed force."

"We have to choose," Eastman says, "and the choice is between freedom and tyranny."

Such a choice will be presented to the American people in the next election. In two of his most recent speeches, Vice President NIXON said:

"The choice is not between the Eisenhower program and something more conservative, but between the Eisenhower program and something far more radical."

The Vice President is right.

How radical is the alternative program referred to by Mr. NIXON? Let us call as a witness Senator HUBERT HUMPHREY. The Senator's liberal credentials, at least in the modern sense of that much-abused word, are unimpeachable. He is a charter member of the ADA; an ardent supporter of Mr. Stevenson; and an able and articulate spokesman for the groups which dominate the Democrat Party. Here is what Senator HUMPHREY wrote in an article published in the autumn 1955 issue of the American Scholar:

"The one distinctive aim (of liberalism) was the liberation of man from traditional restraints."

Let me say at this point that the Constitution of the United States is a traditional restraint. The Constitution is, in fact, the most powerful temporal restraint on tyrannical action by government that the world has ever seen. If men in power are ever "liberated" from the restraining influence of the fifth amendment, economic justice will cease to exist.

Senator HUMPHREY also said in his revealing article on Liberalism:

"Liberalism may one day challenge and another day cherish the church; in one age it may seek less Government intervention in economic affairs, and in another age, more; it may at one time be hospitable to the specific interests of the business community and at another time be hostile.

Let me interject here that modern liberals are not usually so frank in stating their demands for absolute freedom of action. Personally, I have no desire to live under an administration which might be hostile to the church, economic freedom, and the business community.

Continuing the quotation from the Senator's article:

"The liberal approach must be experimental, the solution tentative, the test pragmatic. Believing that no particular manifestation of our basic social institutions is sacrosanct or immutable, there should be willingness to reexamine and reconstruct institutions in the light of new needs."

Just compare that philosophy of government with the "dynamic co: servatism" of President Eisenhower. The different is one of first principles. How absurd to say that the American people are limited to a choice next November between tweedledee and tweedledum.

Other forces are hacking away at the concept of economic justice. First, there are the spiritual descendants of Karl Marx, only a small fraction of whom are enrolled in the Communist Party. Marx, you will recall, wrote: "In order to create equality, we must first create inequality." Men of superior ability were deliberately penalized under the rule: "From each according to his ability, to each according to his needs." If we have learned anything from history, it should be that communism and socialism create vast inequalities, but that the only equality produced is in misery and death. Still, there are many people who naively believe that the price of pork chops can be permanently controlled without the Government moving in the direction of hanging the butcher.

The ideal of economic justice comes under heavy attack from the economic agencies of the United Nations. A score of spending programs are based on the false assumption that a global redistribution of wealth would be just. The basic tenet of Marxism is given an international twist: "From each nation according to its ability, to each nation according to its needs."

On the international scene as on the domestic, men afflicted with planners' itch seek to control the production, distribution, and price of basic commodities. Their goal is total regimentation of international trade. Friends of the free market economy drew first blood when the U. N.'s International Trade Organizations collapsed for want of United States support. But when this master plan aborted, the global planners formulated international agreements for particular commodities—wheat, oil, tin, sugar, rubber, etc. The U. N. has even called a conference to draft plans for an international agency to support the price of olive oil. The proposed agency would be officially known as the Olive Oil Fund; unofficially as OOF. OOF would need to start with a fund of $20 million. You know who would foot the bill.

Then we have the U. N.'s International Labor Organization and Human Rights Commission which are attempting, by treaty law, to regulate the economic rights and duties of people all over the world. I do not have time to discuss these socialistic proposals in detail. In this connection, however, three facts deserve attention:

First, the extravagant economic promises set forth in U. N. and ILO treaties cannot be fulfilled without the imposition of unjust economic duties.

Second, a former Chairman of the U. N. Human Rights Commission, Dr. Charles Malik of Lebanon, commented as follows on the U. N. draft Covenant on Economic and Social Rights:

"I think a study of our proceedings will reveal that the amendments we adopted to the old texts under examination responded for the most part more to Soviet than to Western promptings."

Third, the U. N. Human Rights Commission has voted overwhelmingly on several occasions against recognizing the right to own property as a fundamental human right.

What can businessmen do to defend the traditional concepts of economic justice? For one thing, they can stop supporting those U. N. agencies and commissions which devote their energies in the main to the promotion of socialistic causes. It is incomprehensible to me why some American businessmen fight even the mildest forms of economic intervention at home, while at the same time they finance organizations which spread the U. N.'s brand of socialism.

Next, businessmen can stop financing publications, organizations, and educational institutions which are hostile toward the ideal of economic justice. Many worthy conservative causes have folded for lack of adequate financial support. A whole book could be written on the subject of business contributions to those who would destroy private business enterprise.

And finally, businessmen can stop being smug—smug in the sense of regarding technological and economic achievements as the end-all and be-all of life. The time in which we live forbids hysterical optimism. The fact that responsible men, in the age of thermonuclear weapons and the Communist menace, can assert that this is the best of all possible worlds indicates a severe loss of perspective. Even without the overhanging threat of communism, our unprecedented material prosperity would not necessarily prove that every day in every way life is getting better and better. Unless a veritable orgy of consumption is the object of life, a high level of prosperity offers merely a better chance for men to achieve the higher ends of life. The purpose of life is to live it with the greatest possible fidelity to such nonmaterial values as truth, justice, fraternity, and loyalty. These are the values which most Americans recognize as a reflection of God's will.

The future of America depends today, as as it always has, on the indispensable supports of morality and religion.

Scudder No Opponent of Dam Construction

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 29, 1956

Mr. PHILLIPS. Mr. Speaker, I am quite sure that neither you, nor any other Member of this House, expects accuracy from the writer whose daily column is placed quite properly by the Washington Post and Times Herald on the page with the comic strips. However it seems to me that it was going a little too far, even for him, when he laid the responsibility for the disastrous floods in California last fall at the door of the Representative from the first district of my State.

Having served in the California Legislature, as well as in the Congress, with HUBERT SCUDDER, and knowing therefore the regard and respect in which he is held both in Washington and California, I was inclined to laugh off the accusation, but these canards, deliberately thrown out to injure an individual or to influence a campaign, can be more serious than we sometimes think.

I was delighted therefore to receive in the mail a few days ago a copy of the editorial from the Santa Rosa Press-Democrat of January 24, 1956, a leading daily in the first district. The charge that the gentleman from California [Mr. SCUDDER] in any way opposed necessary dam construction in his part of the State, or any other part, for that matter, is completely exploded. To those who know him, the editorial is hardly necessary, but we are pleased that the editor took the time and space to refute the charges, and I have asked unanimous consent to extend my remarks and to include the editorial here, for the benefit of anyone who may have seen the

original, unjustified attack upon an able Member of this House:

[From the Santa Rosa (Calif.) Press-Democrat of January 24, 1956]

SCUDDER NO OPPONENT OF DAM CONSTRUCTION

You probably were just as startled as we were to read in Drew Pearson's column awhile back that the northern California floods would not have been so serious if Congressman SCUDDER hadn't blocked the construction of dams.

Since Mr. SCUDDER is the man we can all thank for the legislation which made Coyote Valley Dam financially possible, and since he's performed legislative miracles in getting construction speeded, we thought this accusation could stand checking. We wondered what other dams, if any, the columnist had in mind since it sure wasn't Coyote.

Checking up took a little time and work, but you might be interested in knowing what we found.

One of the major northern California projects is the Feather River dam. Far from blocking it, Mr. SCUDDER is the man who in 1950 introduced the bill which would have constructed it, along with an irrigation canal system and hydroelectric facilities to generate 300,000 kilowatts of power. Since then, reapportionment has taken that area out of Mr. SCUDDER's district and placed it in that of Representative CLAIR ENGLE, of Red Bluff, and a movement has started to have the dam built by the State of California instead of the Federal Government. But Mr. SCUDDER was extremely active to get a dam built which would control floods such as the one that hit Yuba City this year.

That leaves the Trinity River project. Congressman ENGLE introduced a bill last year to authorize it. Mr. SCUDDER promptly announced he would oppose it until such time as the rights of the downstream users on the Trinity were protected.

He wasn't opposing the dam as such, but he did oppose an allocation of water that would ship the stream to other parts of California and take water away from people on the lower Trinity who had always used it.

He and Mr. ENGLE had no difficulty in reaching a fair settlement. Mr. SCUDDER then advised the House that he had no further objection to the matter. He supported Trinity Dam when Mr. ENGLE's bill came up for passage last year.

Mr. SCUDDER's record shows consistent leadership in legislation to stop the damage of floods and the waste of water through construction of dams.

More Power to Them

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. WESTLAND. Mr. Speaker, an editorial which appeared February 23 in the Oak Harbor News, a weekly newspaper published in my district, points up the advantages being realized under the Eisenhower administration's partnership-power program. It outlines the advantages the power consumer is getting today compared with those under past power policies.

The State of Washington has several projects in which Federal, State, county, municipal, and private power operations are combining their facilities to provide more kilowatts of power in the immediate future.

I believe this editorial characterizes the endorsement of this enlightened power program that the people of my district have indicated to me.

The editorial follows:

THINGS ARE LOOKING UP

The consumer is getting the breaks these days with the compromise offered by both public and private power companies. In the 50 years that the Pacific Northwest has been torn by fighting over public verses private power, each issue has been fought on a knock-out basis, the winner taking all, and the consumer paying for it while costly legal delay ran into years.

The new philosophy on generation of power accepts compromise that in effect says: "Why wear ourselves out fighting? Let's share the power and get on with the job." Presenting for the first time a middle ground where both public and private utilities can live without trying to destroy the other.

This is a switch for the consumer, who is always the little guy looking on, while big corporations fight over his right to power. He is usually only concerned when his television refuses to function properly, when his electric bill is too high or his voltage inadequate but he is still the consumer. He is the one who uses the electricity and who is glad to pay for it, and he is the one who will be mighty glad that the power companies have decided to give him a break. He deserves it.

Resolution Favoring the Construction of Pelton Dam

EXTENSION OF REMARKS
OF
HON. SAM COON
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. COON. Mr. Speaker, under leave to extend my remarks I wish to insert in the RECORD the following resolution which I have received from the Jefferson County Jaycees, of Madras, Oreg. The junior chamber of commerce has sent me a well thought-out resolution which I am herewith submitting for your reading.

The resolution follows:

RESOLUTION

Whereas that portion of the Deschutes River which would be inundated by Pelton Dam is now as always inaccessible to all but a handful of the hardiest fishermen; and

Whereas that same area would be open to thousands who do not have the time or the strength to make the arduous trip now necessary; and

Whereas the lower Deschutes River historically has been reserved for power; and

Whereas commercial fishing interests have not until now protested it being thus reserved; and

Whereas salmon observed in numerous careful counts have been pitifully few; and

Whereas the Deschutes River for years has relied on planting for its fish population; and

Whereas Pelton Dam, when constructed, will assist in the growth of Oregon by paying taxes; and

Whereas the value of the power to the State of Oregon will outweigh the value of the fish; and

Whereas the construction of Pelton Dam will include adequate provision for fish propagation; and

Whereas the construction of Pelton Dam will include adequate provision for recreation facilities; and

Whereas the Supreme Court of the United States has ruled favorably on the Pelton Dam project: Be it

Resolved, That the Jefferson County Junior Chamber of Commerce go on record as favoring the construction of Pelton Dam without delay and opposing all actions tending to delay it.

Raids on Companies

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 29, 1956

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Mr. Philip Hampson, and published in the Chicago Tribune of February 26, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TWO MAIN TOOLS USED IN RAIDS ON COMPANIES—WAYS ARE SECRECY AND INFLUENCE

(By Philip Hampson)

We take up again this morning the subject of financial raiders, who usually are Johnny Come Latelies seeking to grab control of long-established companies.

Many raids have resulted in bitter proxy fights such as took place in Chicago last year for the control of Montgomery Ward & Co., and Libby, McNeill & Libby, whose managements successfully repelled them.

Currently, Fairbanks, Morse & Co., 126-year-old Chicago enterprise, appears headed for a proxy fight staged by Leopold D. Silberstein, president of the Penn-Texas Corp., New York City, who wants control or effective representation on the company's board.

Silberstein arrived in this country in 1948 and has been a citizen here since 1953. He was born in Germany.

SECRET STOCK PURCHASES

Raids often are opened through stock purchases carried on in great secrecy. The raiders' agents buy their stock under names hidden in brokerage accounts or in foreign banks.

A busy management obviously may be unaware that its position is menaced until active trading indicates something is up. And then the management finds itself somewhat in the position of the man walking alone in a dark street who suddenly gets a knife in the back.

The American spirit of fair play looks askance at raider tactics. Years ago the country had its share of ruthless financial raiders, but you will go a long way to find a kind word spoken about them.

Col. Henry Crown, one of Chicago's most respected businessmen, well expressed the American feeling to this writer recently. Crown, asked to join a financial transaction—it was not a raid, though bickering was involved—declined, saying: "I am a builder."

TWO "TOOLS" LISTED

We have observed that in a number of raids two "tools" have been used to a greater or lesser degree. One is the secrecy provided in a financial operation carried on through

the medium of "street accounts" in brokerage offices or Swiss banks.

The other is "influence," which usually means the help provided by politicians or by former Government officials who know their way around in their respective fields.

Regarding the Swiss banks one Chicago stock broker told this writer recently that the way stock manipulations are carried on through them in connection with American companies is a national scandal.

He was astonished that the State Department has done nothing about it. Stock purchases can be made through accounts in Swiss banks which are identified only by number—the identities of the individuals concerned are kept secret.

The Swiss banks for years have been bankers for the world. They may act as agents for deposed kings or runaway dictators in hiding money in the United States through the purchase of securities in American companies. Or they may act for American bankers.

SOVIET PURCHASE POSSIBLE

One banker observed that it would be relatively easy for a Soviet agent engaging in a number of interbank transactions in Europe to wind up, by transferring funds through a Swiss bank, purchasing stock in an American company engaged in secret defense work.

Taking up the second tool, influence: Political influence has always been of the greatest aid in getting a wide variety of things done.

These may range from getting approval to build an entry across a sidewalk into one's yard to getting a juicy Government insurance contract. The record of how things are done in Washington is too widely known to be belabored here.

In Silberstein's activities there appear to be a few "happy" coincidences. One of his New York lawyers is Benjamin Javits, the brother of Jacob Javits, attorney general for New York State.

As the only winner of a major post in the last election in New York State the attorney general is not without influence when he raises his voice in Republican councils.

In Chicago one of Silberstein's lawyers is W. McNeil Kennedy, who was Chicago regional manager for the securities and exchange commission when the Roosevelt administration was in power.

ALSO SERVES SILBERSTEIN

Serving Silberstein in Washington is Oscar L. Chapman, who was Secretary of the Interior under President Truman. Chapman currently is described as a "Washington lawyer." He is also a director of Penn-Texas.

Harry A. McDonald explained in a court case in Chicago involving Fairbanks, Morse that he was here at the request of Chapman to testify on behalf of the Siberstein interests.

McDonald, a former Detroit, Mich., investment banker who now is a Washington investment adviser, under Truman was chairman of the SEC and later administrator of the Reconstruction Finance Corporation.

We are not sure of Silberstein's status in the present expected Fairbanks, Morse proxy fight. As we previously stated Silberstein on January 5 informed the New York correspondent for The Tribune that neither he nor his company was buying stock in Fairbanks, Morse.

He also emphasized that "under no circumstance will Penn-Texas engage in a proxy fight for control of Fairbanks, Morse." On January 26 he informed The Tribune in Chicago that he owned 100,000 shares and indicated he would engage in a proxy fight.

Meantime, the situation is complicated as regards the Chicago company because of differences of opinion that exist between 77 year old Col. Robert H. Morse, Sr., chairman of the board, and his 82 year old brother Charles H. Morse, Sr., who once was president.

The Farm Bill

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Wednesday, February 29, 1956

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Get Politics Out of Farm Support Bill," published in the Philadelphia Inquirer of February 25, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GET POLITICS OUT OF FARM SUPPORT BILL

Just about the most freakish—and most unsound—legislation ever attempted on America's farm problems is the hybrid bill now before Congress.

It is an election year monstrosity in which Democrats, for perfectly obvious political reasons, are linked with some farm State Republicans to force a return to the high rigid farm-price support system. In this move the high, unalterable and artificial support plan is jammed on top of the administration's soil-bank proposal.

That would make the measure, by which the administration aimed to reduce excess acreage and thereby to hold down huge, unmanageable farm-crop surpluses, worthless.

Is this politically motivated scheme headed toward greater prosperity for farmers? Senator GEORGE D. AIKEN, of Vermont, declared in a speech yesterday, "High rigid price supports never have brought prosperity to the American farmer and never will."

But they have brought the deadweight of vast, unusable, unsalable accumulations of wheat, corn, cotton, and peanuts. We think Secretary of Agriculture Ezra Taft Benson called the turn in his television appearance Thursday night when he declared, "Surpluses are smothering farm prices and income."

They can't be sold to any worthwhile extent; can't even be given away. But they hang like a vast pall over the farmers of the United States; always a threat to existing prices; always a brake on better prices.

Senator AIKEN showed yesterday how the real upsurge of farm prosperity came from the Second World War; then from the Korean conflict. Farm prices, he said, skidded between those two outbreaks; then took another downward turn starting in 1952.

Congress gave President Eisenhower a mandatory directive to continue the high price supports—the 90 percent of parity system—for 2 years, the Senator said. And what happened? It filled the Government and other warehouses to overflowing again. It made farmers—to be paid with tax money—plough and sow acreage far above requirements to produce immense crops that had no place to go except those warehouses.

Mr. Benson has fought valiantly, and continues to fight, for a formula that will cut down unneeded crop acreage, and unusable crops. And in time reduce the need for all this storage of crops nobody wants. Senator AIKEN took a significant jab on the latter point in his speech when he referred to some champions of high-level supports as people "making fortunes out of storage of Government surpluses." Few, if any, of those engaged in crop storage are farmers.

The important thing Senator AIKEN did yesterday, as Mr. Benson has been doing all along, is to shed a clear light on the hard facts about high farm price supports: That they didn't solve farm problems and won't solve them if tried again.

The administration bill seeks, by reducing acreage—for which farmers would receive a subsidy, and a realistic application of flexible farm price supports—to create barriers against greater and greater surpluses.

But the farm-bloc amendments, for the 90-percent-of-parity supports, would wipe out the soil-bank plan. It's plain enough: The soil bank would work to reduce farm crop surpluses; the high level supports would make certain that more surpluses would occur. That shows how charged with politics the farm bloc's 90-percent-of-parity revival is.

For the farmers, and the Nation, it would be a backward step to continue the same faulty attempt to meet farm problems that have failed in the past. No sound, permanent solutions of those problems can be worked out by politicians for political reasons. The Eisenhower-Benson program seeks real and lasting solutions. Without the crippling partisan amendments that have been loaded on to it, that program should have the full support of farmers and all other citizens of the Nation.

Need for Election Legislation

EXTENSION OF REMARKS
OF
HON. EARLE C. CLEMENTS
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES

Wednesday, February 29, 1956

Mr. CLEMENTS. Mr. President, this morning's Washington Post and Times Herald carried an excellent editorial on the elections bill, which has been prepared by the Senate leadership. This editorial sums up well the reasons for the country's need of a new election structure. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LIMITED CAMPAIGN SPENDING

The emphasis on full reporting of political contributions in the Johnson-Knowland "honest elections" bill, introduced yesterday, is unquestionably a major step forward. Truthful accounting for campaign receipts and expenditures is the largest single need in exposing and eliminating unsavory influence. This salutary effort, and the provisions covering broadcast time for major candidates and permitting income-tax deduction of political contributions up to $100, far outweigh the minor defects in the bill.

Among the questions of detail likely to be raised is whether the proposed limitations on campaign spending are themselves realistic. By camparison with the obsolete limits in the present law, the new figures are undoubtedly generous. To some they may seem excessive. But it must be remembered that the present law has never been effective. It has restricted the spending of each candidate and political committee without any control whatever over the number of such committees that may be set up in behalf of a single candidate. The new bill is an attempt to close this loophole, to require the reporting of all contributions for each candidate by a single agency. If it works out that way, some of the limits it would impose may prove to be too low rather than too high.

The present limit on spending by senatorial candidates ranges from $10,000 to $25,000, the basic measuring stick being 3 cents per vote. Under the Johnson-Knowland bill, the minimum limit imposed on candidates in the smaller States is $75,000, with a 20-cents-

per-vote escalator, which, in the case of New York, would permit the spending of about $1,300,000. For candidates for the House the limit would be boosted from $2,500 ,or 3 cents a vote, to $15,000, or 20 cents a vote. While these changes appear to allow drastic loosening of controls, the new figures must be compared to what candidates have actually spent in recent years, and not to the fiction recorded in the statute books.

At first it appeared that the 20-cents-per-vote formula would impose a crippling limitation upon the Republican and Democratic National Committees. This formula would allow each to spend about $12 million in a presidential campaign. But State and local committees could also spend up to $12 million, which means that no effective limit would be imposed on the national parties so long as they operated in large part through State and local committees.

One especially significant provision would require all donors of more than a total of $5,000 to make consolidated returns showing who got their gifts. That should provide a ready index to any major effort to influence votes through the lavish distribution of campaign contributions. Yesterday's evidence before the George committee to the effect that lobbyist Neff attempted to reach the Senators of 5 States in connection with the natural gas bill emphasizes the wisdom of this provision. By contrast, contributions of $100 or less would not need to be reported. Some provisions of the new bill are admittedly experimental, but with its stress on accurate and comprehensive reporting it offers enormous advantages over the present law.

Arms for the Mideast

EXTENSION OF REMARKS

OF

HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, February 29, 1956

Mr. McNAMARA. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Detroit Times of February 25, 1956.

Entitled "Let's Suspend Confusion," the editorial points up the bumbling, confusing role of the State Department in regard to the shipment of 18 tanks to Saudi Arabia. For the record, I should like to say that I agree with the sentiments expressed in this editorial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET'S SUSPEND CONFUSION

The off-again on-again mixup over the shipment of 18 Walker Bulldog M-41 tanks to Saudi Arabia is a disturbing indication that we may not have a clear Middle East policy at a time when war threatens that economically and strategically vital area.

Even the announcement of the State Department about the embargo on shipment, imposed one day and then lifted the next night, is confusing.

Details of the original sale were reviewed and it was stated that it was "subjected to the usual careful scrutiny to determine if it would meet" conditions of law and policy.

The sale obviously met those conditions or the shipment would not have gone ahead.

Then, says the State Department:

"On the evening of February 16, inquiries were made concerning the tank shipment about to leave New York harbor. It was decided to suspend all outstanding export licenses for the area in question pending an examination to insure that such exports were being made in compliance with pertinent laws and regulations and were in conformity with the policies of the United States with respect to the maintenance of peace and stability in the area."

The licenses were suspended the following day and reinstituted the next day.

Thus a deal made in secret and approved in secret had to be suspended and then reapproved when it became public.

Everyone is aware, we feel sure, of the complex difficulties in the Middle East.

Those difficulties are emphasized in the State Department announcement to which we are referring.

It speaks of the "massive shipment of arms by the Soviet bloc to the Near East," meaning the supplying to Egypt of jet planes, tanks, artillery, and submarines.

It calls this a clear signal for the starting of an arms race that would increase the danger of war in the area.

The United States, Britain, and France are opposed to the development of an arms race and said so in the tripartite statement of May 25, 1950.

But questions arise:

"Is this an arms race or is it becoming no contest?

"It has been the policy of our Government to maintain if possible a balance of defensive arms between the Arab states and Israel, but has not this been upset by Egypt's possession of modern jet planes while Israel has no comparable craft?"

It is one thing to abhor an arms race, and quite another to know how to prevent it.

The State Department says this dangerous situation is under continuing review, and we presume that study includes the Israeli bid to purchase $50 million of arms in this country.

A balance of arms has prevented war so far. If it is determined the balance has been dangerously upset, there is less peril in restoring it than in permitting the gap to widen.

Also as part of the continuing review, and in the face of the embarrassing turnabout on the tank deal, we suggest it would be healthful for Secretary of State Dulles to make a full-dress report to the American people.

There is clear danger of Mideast conflict. What are we doing to stop it?

What, frankly and bluntly, are the risks and the remedies?

Let us put an embargo on confusion.

Silberstein Is Both Broker and President

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 29, 1956

Mr. CAPEHART. Mr. President, I request unanimous consent to have printed in the Appendix of the RECORD, an article written by J. A. Livingston, and published in the February 29, 1956, issue of the Washington Post and Times Herald.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BUSINESS OUTLOOK

(By J. A. Livingston)

SILBERSTEIN IS BOTH BROKER AND PRESIDENT

Leopold D. Silberstein, president of Penn-Texas Corp., one of America's sudden tycoons, is a corporate leapfrog. He takes over a company, then, with the help of its treasury, leaps on some other company.

He leapfrogged himself into control of Industrial Brownhoist Corp., Niles-Bement-Pond, and others. Now he is leaping on the 98-year-old Fairbanks, Morse & Co., of Chicago, whose $99 million in assets nearly matches Penn-Texas's $104 million.

On January 27, Silberstein, flanked by attorneys, presented himself to Robert M. Morse, Jr., Fairbanks, Morse president, and volunteered to be chairman of the executive committee or chairman of the finance committee. His Penn-Texas Corp. had become the mysterious possessor of 115,000 shares, or 9.4 percent of the outstanding stock.

One hundred thousand of these shares were acquired from the Union Bank of Switzerland for $4,300,000, on which $2,300,000 is still owing. Question: How did a foreign bank, 3,900 miles from the New York Stock Exchange, acquire 100,000 shares? Was the stock accumulated in expectation of a sale to Penn-Texas at $43 a share? Was a profit made? If so, by whom?

The other 15,000 shares were bought by Penn-Texas at $47 a share from Charles H. Morse, who has had a falling out with his brother, Robert H. Morse, Sr., Fairbanks, Morse chairman, and his nephew, Robert H. Morse, Jr. The Charles Morse-Silberstein contract raises a question of prudence. Silberstein commits Penn-Texas Corp., to purchase within 3 years an additional 27,220 shares, the price to be determined by quotations the day before on the New York Stock Exchange. Fairbanks-Morse stock could skyrocket and Penn-Texas would be stillbound. It's an almost unlimited liability.

At the moment, Silberstein is a white knight fighting the Robert Morses for self-dealing. He's seeking an injunction to prevent the company from swapping Treasury stock on a share-for-share basis for Canadian Locomotive Co., Ltd., already controlled by Fairbanks, Morse. Silberstein has a point. Robert Morse, Jr., as president of Fairbanks, Morse, bargains for Fairbanks, Morse shareholders, then slips over to the other side of the table and, as president of Canadian Locomotive, bargains with himself for Canadian Locomotive shareholders.

Harry A. McDonald, former Securities and Exchange Commission Chairman, called as an expert witness for Penn-Texas, characterized the proposal as unfair to Fairbanks, Morse stockholders. Fairbanks, Morse has been a consistent moneymaker, whereas Canadian Locomotive, after 4 years of losses, has just emerged into the black. Fairbanks book value is about $46 a share versus about $16 for Canadian Locomotive.

If the exchange goes through, it would put additional Fairbanks, Morse stock in friendly hands and dilute Silberstein's equity. Yet in this proxy-battle tactic to defeat Silberstein, the Morses may be too casual in discharging their responsibility as trustees for Fairbanks, Morse shareholders. In a proxy contest, this will help Silberstein's side of the argument.

Silberstein, in turn, may be too casual in his relations with Penn-Texas shareholders. He is president and principal shareholder of Uno Equities, Inc., a brokerage firm whose address is 111 Broadway, New York, the same as Penn-Texas. The telephone numbers also are the same.

I have seen photostats indicating that Uno Equities has acted as broker for Penn-Texas in purchasing 5,000 shares of Fairbanks, Morse & Co., which is listed on the New York Stock Exchange. The commissions charged were double the standard minimum New York Stock Exchange rates. A public relations adviser, speaking for Silberstein, who was too busy to talk, said: "You can say for Mr. Silberstein that none of the stock acquired before February by Penn-Texas was purchased through Uno Equities."

When I said I was referring to stock purchased in February, I was told that I was

engaged in cross-examination, that the question was not material.

I can only conclude that Silberstein has been siphoning off Penn-Texas petty cash—the commissions came to $3,845.74, of which $1,922.87 was the Uno Equities add-on to minimum stock exchange rates—through his own brokerage firm.

As a stockholder in Fairbanks, Morse, Silberstein is properly apprehensive about the Morses' self-dealing. Yet Penn-Texas stockholders have cause for apprehension if Silberstein, as their trustee, charges them, as their broker, more than standard commissions. It suggests looseness with other people's money.

Progress in Artificial Heart-Lung Research

EXTENSION OF REMARKS
OF
HON. ALLEN J. ELLENDER
OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 29, 1956

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the RECORD two items, both published in the New Orleans Times-Picayune. The first is an article from the January 11, 1956, issue, the second an editorial from the issue of January 12 of the same newspaper. Both the article and editorial deal with the subject of progress in artificial heart-lung research.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the New Orleans Times-Picayune of January 11, 1956]

TWO-DOLLAR DEVICE USED IN KEEPING DOG ALIVE FOR 27 MINUTES—ARTIFICIAL HEART-LUNG RESEARCH PROGRESS CITED

(By Pen Wilson)

Five New Orleans doctors performed a heart operation on a dog Tuesday and for 27 minutes kept the dog alive with a $2 device that performed the functions of the dog's heart and lungs until the pup's own organs took over again.

The dog was still alive late Tuesday and there was every reason to think it would fully recover from the surgery, the doctors said.

The $2 apparatus, a device consisting of little more than a plastic bag and several tubes, is an artificial combined heart and lung.

In a cautious and carefully worded announcement, the doctors emphasized that their research with the artificial heart-lung is "in no way complete," noting that it has not yet been used on human beings.

BACKED BY DEMONSTRATION

Other devices, somewhat similar, have been in use elsewhere in the country but this team of doctors believes theirs is the only one in existence that is so ultrasimple it can be mass produced, sterilized and discarded, all for only $2.

The doctors, who released their preliminary report Tuesday, and who backed it up with a surgical demonstration in an eighth-floor laboratory of Tulane University's Hutchinson Memorial, are:

Dr. Reichard Kahle, 45-year-old native New Orleanian, an associate professor of surgery at Tulane.

Dr. Dennis Rosenberg, 34-year-old graduate of the University of Witwatersrand in Johannesburg, South Africa.

Dr. Salem Sayegh, 33, an instructor of surgery at Tulane and a graduate of the Royal College of Medicine in Bahdad, Iraq.

Dr. Edward S. Hyman, 30, a graduate of Johns Hopkins University in Baltimore and now a clinical instructor in medicine at Louisiana State University, and his brother, Dr. Albert L. Hyman, 32, also of the LSU staff. Both are native New Orleanians.

RESEARCH UNDER GRANT

Their research is being conducted at Tulane under a grant from the Louisiana Heart Association to Dr. Kahle.

In brief, their device, which was designed and built by Dr. Edward Hyman, bypasses all the blood from the heart and in their experiments has taken over the functions of the heart and lungs for 30-minute periods, enough time to perform most corrective heart surgery.

The bypassing of the blood from the heart enables the surgeon to work with a "dry heart" and insofar as the team's dogs are concerned has ended the system of groping into the heart and trying to work in a mass of blood.

The present device has been used successfully on four dogs, not counting Tuesday's, and in each case the heart was opened while the device labored away for heart and lungs for half an hour, the doctors said.

The dogs' recoveries have been apparently so complete, said Dr. Albert Hyman, that in one instance he went to feed the dog a few hours after the operation only to have it jump from its cage and scamper playfully about the room.

MORE TESTS REQUIRED

But Dr. Kahle estimated it will take many more dog operations before the lung-heart will be tried on a human patient.

This, much simplified, is the way the team operated on a 23-pound mongrel Tuesday:

The dog was given a general anesthetic and prepared for surgery.

Swathed in surgical sheets and dressings, and with only its shaven chest exposed looking for all the world like a small child, the dog's jugular vein was exposed.

An incision was made under the fourth rib.

Meanwhile artificial respiration took over for the breathing mechanism.

ELECTRICAL PUMP STARTS

Two of the main veins entering the heart were then isolated and a plastic tube was passed into them to aspirate all the blood coming from the heart.

A second tube was passed into the artery and an electrical pump was started to circulate blood through the apparatus.

The artificial respirator was turned off. By this time the artificial heart-lung was doing the dog's breathing.

The surgeons then opened a sac which holds the heart, then opened the heart itself.

The plastic bag and pump drew out all the coronary blood—but the heart continued to beat "dry."

Without the device, the entire cavity would have filled at once with blood, Dr. Kahle explained.

A drug was injected to keep the blood from clotting.

All the while Dr. Albert Hyman checked the dog's blood pressure.

DOCTORS REVERSE PROCEDURE

The dog's heart proved to be in good shape, said Dr. Kahle. He noted: "Now you get a sick baby, and it wouldn't be this easy."

After letting the artificial heart-lung work for 27 minutes, the doctors "backed out," that is, reversed the procedure. In all it took about an hour and a half as compared, Dr. Kahle said, with possibly 5 hours under other systems.

"The dog looks as though it did quite well," said Dr. Edward Hyman.

How many dogs are they away from trying it out on a human? "Perhaps a couple of dozen," they said. Humans "within a few months," said their formal announcement.

How could such a plastic device be made? "It can be stamped out commercially like a beach ball or any plastic toy," Dr. Edward Hyman said. "It's got about $1 worth of tubing and 50 cents worth of plastic."

[From the New Orleans Times-Picayune of January 12, 1956]

PLASTICS HEART-LUNG

As its designer says, the artificial heart-lung apparatus now being successfully experimented with at Tulane University for animal heart surgery owes its chief distinction to its relative simplicity; the plastics of which most of it—excepting, we suppose, some mechanical units—is composed; and its capacity for cheap, mass production. It includes an oxygenator to refresh the blood in its short-cut passage. Plastics have already been found valuable for storing blood; for containing and pumping it in transfusions; and in tubing for artificial heart-lungs.

The main principles of such devices have, in the past decade, exerted great fascination. As we understand it, their use is limited to extreme emergencies where humans are concerned, one of the calculated risks being uncertainties with respect to proper blood circulation over any extensive operating period. As far as practicality in preliminary experiments is concerned, the New Orleans device seems to offer great promise.

It is interesting also that in this Louisiana Heart Association grant project, there are associated with Dr. Kahle, of Tulane, graduates from Iraq and South Africa, and instructors (including Dr. Edward S. Hyman, the inventor) from Louisiana State University.

Investigation of Political Contributions by Big Business

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, February 29, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Whose Ox Is Galled?" by Joseph and Stewart Alsop, in which the resolution submitted by the Senator from Texas [Mr. JOHNSON] and the Senator from California [Mr. KNOWLAND] is very clearly and adequately discussed.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of February 29, 1956]

MATTER OF FACT

(By Joseph and Stewart Alsop)

WHOSE OX IS GALLED?

WASHINGTON.—The grand senatorial investigation of political contributions by big business looks very like turning into an investigation of political contributions by big labor. Not to put too fine a point on it, the grandees of the AFL-CIO are scared pink.

What scares them is the composition of the select committee that the Senate has now named to look into the whole problem

of campaign financing. Sticking out like a sore thumb among the four Republican committee members is Senator BARRY GOLDWATER, of New Mexico, who has been raising the roof about the political activities of labor organizations for some time now.

The committee chairmanship will be allotted, in defiance of the seniority rules, to the young, evangelical Democrat, Senator ALBERT GORE, of Tennessee. If Senator GORE wants to let the chips fall where they may, it is unlikely that anyone will stop him, since there is deep fear in the Senate of any suspicion of a coverup.

But Senator GORE is clearly going to be made to understand that the chips will be very large indeed, and that some of them will fall, in a rather hard and wounding manner, on members of his own faction of the Democratic Party.

Besides Senator GOLDWATER, the other three Republicans on the select committee, BRIDGES, of New Hampshire, THYE, of Minnesota, and PURTELL, of Connecticut, will certainly go along with a move to look into the political money that comes from big labor as well as the money that comes from big business. Equally certainly, at least one of the Democratic committee members, Senator JOHN MCCLELLAN, of Arkansas, will favor such a move.

Some labor leaders have already warned the Senate Democratic leadership of danger ahead. And well they might. Labor contributions take the form of under-the-table money almost as often as business contributions. And it is a reasonable bet that almost every Democratic Senator who is even moderately pro-labor has received some campaign help of this kind.

Every practical politician knows, of course, that there is no truth whatever in the extreme right-wing view that labor money in politics equals or exceeds business money. The total political outlays of the labor organizations certainly do not amount to one-fifth, and probably do not amount to one-tenth of the political outlays of big business. Furthermore, except in congressional elections in the South, at least three-quarters of the money from business sources goes to the Republicans.

Yet the fact has to be faced that a really full and complete inquiry will deeply embarrass everyone, on both sides of the political fence. And this fact in turn suggests that everyone, on both sides of the fence, has been pretty mealymouthed about this business of campaign contributions, which has meanwhile been getting out of hand in all directions.

The behavior of an arrogant minority of the oil industry during the recent natural gas bill fight, which brought on the present inquiry suggests how far out of hand the whole business has got. But there are plenty of other indications.

In the Ohio election that returned the impeccably honest Robert A. Taft to the Senate in 1950, for example, at least $3 million must have been spent, overall, on the Republican side. Yet Truman Newberry was driven from the Senate in 1922, because it was proved that he had spent $195,000 to defeat the elder Henry Ford in the Michigan elections of 1918.

What is urgent, therefore, is not to plow through all the seas of mud that are certainly there to be plowed through by the investigators of campaign contributions. What is really urgent is to subject this business of campaign contributions to reasonable controls, and to establish sensible, workable, nonutopian standards for the future. With his usual good sense, Senate Democratic Leader LYNDON JOHNSON of Texas has seen exactly this point.

JOHNSON has therefore caused to be prepared a revision of the existing statutes, which does three things of cardinal importance, as well as many useful but minor things. First, it brings under control the phony committees that candidates habitually create, often by the score, to conceal the amount of money spent in their campaigns. Second, it sets a realistic ceiling—30 cents per voter in each State—on the amount of money a candidate can spend in a congressional or senatorial fight.

And third, and most important of all, the Johnson bill requires full and complete disclosure of every campaign contribution of whatever kind, so that everyone will know who's influencing whom. With the political campaigns growing more astronomically costly every year, the need for something like Senator JOHNSON'S bill has become more and more acute. And if the present ruckus causes the bill to pass, the net result will be excellent.

Compulsory Licensing—The Path to Creative Atrophy

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. COLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article regarding compulsory licensing of patents provisions of the Atomic Energy Act of 1954, published in the February 27, 1956, issue of Washington Atomic Energy Report:

COMPULSORY LICENSING—THE PATH TO CREATIVE ATROPHY

(By W. Sterling Cole)

The Atomic Energy Act of 1954 provides advanced legislative principles and standards to guide a rapidly expanding industrial, scientific, international, and military program. It contains progressive principles and is a sound law, except for the so-called compulsory licensing provisions.

A compulsory license to a patent is a governmental order which authorizes persons other than the patent holder to use and benefit from his discovery. I consider such a provision in any law unconstitutional, unreasonable, and an invasion of personal and property rights for no good purpose.

Proponents of compulsory licensing of atomic energy patents argued that the Federal Government had spent some $13 billion developing the atomic energy art; and that the corporations who were contractors of the Atomic Energy Commission would capture important patents, conceived while a contractor, to the exclusion of companies with no prior AEC relationship. I sympathized with this concern. However, compulsory licensing is not necessary to prevent this happening. I believe in a different approach, one which looks to the problem itself. I would deny a patent in any case where the invention or idea rightfully belonged to the Government.

The framers of the Constitution provided in article 1, section 8, clause 8 that Congress would have the power "to promote the progress of science and useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries." The Constitution does not refer to patents as such but rather to the exclusive right of authors and inventors. I examined the available historical records of the Constitutional Convention and found that the word "patent" was considered by the framers but the words "exclusive right" were chosen instead. I believe this was purposeful—to protect the integrity of the grant—to prevent such things as the compulsory license.

The First Congress created a patent system, using the words "sole and exclusive right" in the first patent statute to describe a patent. With this the concept of exclusiveness was fortified. The patent statutes provided the base upon which industrial America grew. The patent gave a temporary monopoly to one individual or company; yet the system was such that the concepts embodied in the discovery were published for the world to see. The competitor or patentee then set to work to improve upon the invention to insure that once again he could compete in the national market place. This guaranteed a pyramid of development and gave birth to an industrial giant.

Congress, in acting later to curb combinations in restraint of trade, passed the antitrust laws—but these laws left intact the patent monopoly. In recent years there have been proposals calling for a compulsory licensing system because of alleged monopolistic practices involving patents. Such proposals have failed when faced with the contention that the patent monopoly was a fleeting one—one that passed with the next significant improvement.

The compulsory licensing features of the Atomic Energy Act are the first of their kind. They defy the Constitution because the power of Congress is limited to granting the "exclusive right." This patent with a cloudy title is not exclusive—it is public and open to invasion. Thus, section 153 of the Atomic Energy Act does violence to the patent system and established a dangerous precedent.

The greater reason for having a normal patent system in the atomic energy field exists in the express desire of our Government to quickly bring the benefits of atomic energy development to our people. Compulsory licensing will only lead to the creative atrophy of the Socialist state. Why should one improve upon the patent of his competitor if the Government will give him ready access to the existing invention?

During the debate on the 1954 act, the House at first rejected compulsory licensing and substituted an amendment which I proposed. This is now section 152 of the act. This section provides that any invention or discovery in the nonmilitary atomic field conceived during a relationship with the AEC would be deemed to have been made by the Commission but the Commission can waive this right. The House rejected compulsory licensing, but it was adopted by the Senate, as section 153 of the act. As enacted, the law retained both sections.

In this Congress, I have introduced H. R. 5167 which would abolish compulsory licensing and also modify section 152. The amendment would continue to preclude special patent advantages to contractors—but where section 152 now refers to most any relationship with the AEC, my proposed amendment refers only to those relationships with the Commission which were for the benefit of the Commission. (The Joint Committee on Atomic Energy will hold hearings on the Cole bill in March.) It has been the practice of the AEC of late to enter into various contractual relations which are not specifically for the benefit of the Government or of the Commission. An example of such a contract is the so-called access agreement. In such an agreement the Commission contracts to make available to an industrial corporation certain classified information to assist that company in the development of the peacetime applications of atomic energy. The company agrees in return to protect this information. A later idea or discovery produced by this company would not rightfully belong to the Government. H. R. 5167 would therefore amend section 152 so that it would only relate to those contracts which were ex-

pressly for the benefit of the Government or the Commission.

Progress in the United States is based upon incentive. This incentive is not only material but has its roots in the satisfactions of accomplishment. I am striving to preserve this.

Post Office Red Ink

EXTENSION OF REMARKS
OF
HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

Mr. JOHANSEN. Mr. Speaker, under permission to extend my remarks, I include the following article and tabulation regarding the operating deficit of the Post Office Department which appears in the March 2 issue of the U. S. News and World Report.

This excellent article not only points up the need for a postal rate increase but also highlights measures being taken by the Department to provide increased efficiencies and economies through mechanization and other improved facilities:

ONE BIG BUSINESS IN TROUBLE—SOME COSTS CUT AT POST OFFICE, BUT RED INK FLOWS

Post Office, like other businesses, is booming. But it can't make ends meet. Mail volume is way up. More money is coming in. But costs are up, too.

A solution is not in sight. Congress balks at boost in postal rates asked by White House.

One of the largest business concerns in the world, the Post Office Department, is in trouble.

The post office has more customers, takes in more money, all the time. Yet it is losing approximately $500 million a year. Its costs are rising faster than its receipts.

The managers of the business, backed by President Eisenhower, are now asking Congress for permission to raise prices. Similar proposals have been turned down in the past, and chances of adoption look doubtful this time. The higher postal rates now asked would not enable the post office to make a profit, or even pay its way; but they would permit construction and modernization.

Postal service will suffer post office officials warn, unless new buildings and equipment are provided. The mail load gets heavier and heavier. Old-fashioned methods of handling mail must be replaced, they say, with modern techniques, including automation.

PRICE OF A STAMP

These are the postage rates that are proposed:

Four cents for ordinary letters, instead of the present 3 cents.

Seven cents for airmail, which now costs 6 cents.

Thirty percent increase in the rates for books, magazines, newspapers, and other second-class mail—the raise to be by 15 percent raises in 2 successive years.

Twenty-nine percent raise in postage for advertising matter and other third-class mail.

If Congress allows these increases, they would bring in an additional $406.5 million a year.

With this extra money, Postmaster General Arthur E. Summerfield proposes to launch a 5-year building program. He would spend $125 million for new labor-saving equipment.

The Post Office Department could not do these things, he says, by simply squeezing costs, effecting more economies. It has drastically cut some costs in the last few years. But the payroll expense constantly rises. That's 80 percent of Post Office costs. Congress has granted 6 pay raises since 1932, with few increases in postage rates.

NEW DEVICES

The only way now to cut costs further, Mr. Summerfield believes, is to provide more floor space and better facilities. For lack of space, some mail now is handled on the sidewalks, even in the rain. The movement of trucks often is held up for lack of loading platforms. More conveyor belts, more new-type carts are needed.

Some of the equipment that is needed is just coming out of the inventors' laboratories: Machines with electronic eyes that flip letters and arrange them in front of the stamp-canceling machines in just the right position; machines that, in effect, "read" typed addresses, sorting letters by cities.

With such devices, costs eventually may be cut enough to wipe out the deficit, postal officials believe. But, even if the price of stamps is raised, they see little hope that the Post Office business will operate in the black—during the next 5 years, at least.

Why higher postal rates are being sought

	Year ended June 30, 1953	Year ended June 30, 1955	Change, up (+), down (−)
Pieces of mail carried, billion	50.9	55.2	+4.3
Families served, million	46.3	43.5	+3.2
Letter-carrier routes	123,241	[1] 130,000	+6,759
Post offices	40,609	38,316	−2,293
Total outlays	$2,779,426,000	$2,732,777,000	−$46,649,000
Total revenues	$2,120,498,000	$2,376,478,000	+$255,980,000
Deficit, to be paid by taxpayers	$658,928,000	$356,299,000	−$302,629,000
Deficit of $483,478,000, expected in the year ending June 30, 1956			+$127,179,000

[1] Estimate.

Thus need for service has grown, offsetting most economies in operations. Postal service still runs in the red.

Address by President Gronchi of Italy

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. ANFUSO. Mr. Speaker, all of us were privileged to hear the very fine address by the President of Italy, His Excellency Giovanni Gronchi, this afternoon. It was a message of sincere friendship from the people of Italy to the people of America. It was also an expression of deep gratitude from the Italian people for the aid given them in the rehabilitation of their country after World War II.

President Gronchi gave us an honest and forthright account of one of our stanchest allies in Europe, Italy. He acquainted us with its accomplishments in the past decade since the end of the war, its present conditions and major problems, and its current international position and outlook. It was an encouraging picture coming at a time when many nations of the free world are beset with all sorts of difficult problems. It is particularly encouraging because the leader of a great European country appeals to us "for closer and uninterrupted cooperation, carried on in a spirit of mutual trust and faith."

Of particular interest also is President Gronchi's view that a "better integrated functioning of NATO" is needed.

His views and comments will surely arouse much interest in Washington and abroad and will stimulate some fruitful thinking and planning for the future. His visit has already borne results for the good in the relationship between our two countries and for the benefit of world peace and freedom.

Mr. Speaker, for this reason I urge Congress to take immediate action in approving the resolution which I introduced on February 9, 1956, House Concurrent Resolution 213, expressing the friendship of the American people for the people of Italy and voicing our hope that Italy will remain one of the leading democratic nations of the free world. Similar resolutions have been introduced by my colleagues HUGH J. ADDONIZIO and PETER W. RODINO, JR., of New Jersey; PAUL A. FINO, of New York; DANTE B. FASCELL, of Florida; and ALBERT W. CRETELLA, of Connecticut. I urge the House Foreign Affairs Committee to report out the resolution in the very near future.

Colorado River Storage Project

SPEECH
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 3383) to authorize the Secretary of the Interior to construct, operate, and maintain the Colorado River storage project and participating projects, and for other purposes.

Mr. EDMONDSON. Mr. Chairman, I would like to commend the gentleman from Colorado for his fine speech, and for the outstanding job he has done as chairman of the subcommittee handling this legislation. I do not believe I have ever witnessed a finer demonstration of patience, fairness, and legislative generalship, than has been displayed by Colorado's distinguished representative, WAYNE ASPINALL, during the long and tiring course of committee hearings and consideration of this bill. It has been a pleasure to serve on a subcommittee with such a chairman, and the House may

rest assured that the legislation before it today has received committee consideration in the highest and most careful sense of the term.

Murder in Mississippi

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Roger Goebel which appeared in the Manhattan College Quadrangle shortly after the Till slaying in Mississippi last fall. Since that time, it has been reprinted in numerous publications, including several national periodicals. It was last reprinted in Town and Village, a local publication of lower Manhattan. It was reprinted for its timeliness in connection with Brotherhood Week. Its content seems to me to be sufficiently important to be brought to the attention of every Member of Congress:

MURDER IN MISSISSIPPI
(By Roger Goebel)

My brother is dead. He was just a boy, but he's dead now. Perhaps you knew him—he was your brother, too.

Why are you so startled? Have you forgotten him so soon? His name? His name doesn't matter. He's buried now, just as all news of him has been buried in the back columns of the newspapers. He wasn't really very important, and a murder in Mississippi certainly can't compare with the latest, raciest scandals in New York.

Well, he's dead now. And he was just a boy. He was only 14, just beginning to grow up. He was full of the wonderful feeling that comes when a boy becomes a man. He was on his first holiday, a thousand miles from his Chicago home. He must have been very proud of his years and of his self-reliance; he must have loved to be alive.

And now he's dead. They killed him. They killed him because of a boastful voice and a cocky whistle; they killed him because he was "fresh"—they killed him because he was black. They took him out in the dark of night and led him away; they beat him, and then they shot him with cold steel bullets whose chill could not match the ice in their hearts. They were fools; they murdered him because of the blackness of his skin, but what blackness could ever match the blackness of their hearts?

And now the boy is dead, and soon he'll be forgotten. You feel uncomfortable already, and wonder why I mentioned him. What's done is done, and who's dead is dead; it happened long ago, and you were not to blame. There are more important things now—wars, and tensions, and world crises. You can't remember a murder—even the murder of a boy—forever.

But he was just a boy and he is dead now, and he was my brother and your brother too. And you didn't kill him—but you let him die. You let him die, and now you're forgetting him, just as you'll forget others like him. You let him die when you didn't fight to save him, not from death but in life; when you didn't save him from his slums and when you didn't give him an education like your own, when you made him take the poorest seats on your buses and wouldn't let him live in your neighborhood, when you made him a second-class citizen and a second-class man. Now you're willing to give him justice, but you were never willing to give him love.

He was just a boy, and he happened to be a Negro. He might as well have been a Slav, or a Jew, or a Puerto Rican, or any other whom the breath of prejudice touches. He's dead, but he might as well have lived in the shadow of your indifference for three score years and 10.

My brother is dead. He was just a boy, but he's dead now. Perhaps you knew him—he was your brother too.

The Truth About the Upper Colorado River Project—I

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. McDONOUGH. Mr. Speaker, the American Enterprise Association recently published a booklet on the controversy over the proposed multibillion-dollar upper Colorado River project.

Senator ARTHUR V. WATKINS wrote in support of the project, and the distinguished columnist and writer, Raymond Moley, presented an analysis which illustrated the inconceivable cost and infeasibility of the project.

These pro and con statements were published under one cover. However, Senator WATKINS chose to insert in the CONGRESSIONAL RECORD only his own statements.

Therefore, in the interest of presenting both sides of this matter and providing my colleagues with a fair appraisal of the project, I submit herewith the statement made by Mr. Moley:

THE CASE AGAINST COLORADO RIVER STORAGE PROJECT AND PARTICIPATING PROJECTS
(By Raymond Moley)

FOREWORD

A year ago the American Enterprise Association published a booklet written by me and entitled "What Price Federal Reclamation?" It presented facts and conclusions which were the result of several years of observation and study of the various Federal enterprises in western reclamation States. Included therein was a brief analysis of the Colorado River storage project, which, in various forms, was then before Congress, and which is now pending in still other forms. My analysis a year ago indicated that under the terms of a bill then pending, which embodied the plans of the administration, the costs would be so excessive as to be wholly indefensible, despite the trick bookkeeping incorporated in the bill and habitually practiced by the Government in reporting such projects.

It was clear that the farmers who would become the unfortunate beneficiaries of the measure could repay only on an average 12 percent of the costs of the original construction, even though under the Government's interpretation of the law they are relieved of any interest charges on the unpaid portion for an indefinite number of years. Figuring not only the burden assumed by the Federal Government in the original construction costs and the interest charges, each 160-acre farm would be subsidized to the extent of $212,000. This, I contended, was an excessive burden to saddle upon the taxpayers of the 44 States who would derive no benefit from the project.

In addition, I noted that this is a strange time indeed to propose the addition of some hundred thousands of acres of productive land, when the Government is seeking means of relieving the burden of surpluses through retiring land from use. The facts which I presented in that study have not been refuted except in a general derogatory manner by some sponsors of the project, blinded to facts by the power of regional interest.

This year Congress and the taxpayers of the Nation are faced by the same general project, but in two proposals which are different not only from those before Congress a year ago, but different from each other. It is my purpose herewith to analyze those two proposals. I feel it proper to state, since my contribution to this booklet follows that of Senator WATKINS, that I am not replying specifically to his arguments. I am going to analyze specific legislative proposals, one of which passed the Senate last year and the other of which emerged from the House Committee on Interior and Insular Affairs.

My position as an opponent of both of these bills is exactly what it was a year ago, when I opposed the measures pending at that time. I am concerned with the solvency of the Nation and with the interests of those millions who are called upon to bear, through their taxes, the costs of Government.

I am not directly concerned with the differences which extist among the States that share in the waters of the Colorado River. Moreover, I am only incidentally concerned with the issue of conservation raised by a proposal to build a great power dam in the Dinosaur National Monument. The essential problem of conservation is to conserve the solvency of the Nation and the taxpayers who dwell therein. I may add that it has been food for bitter reflection that so many commentators and others have interpreted this controversy only as a battle to preserve the sanctity of a beautiful national monument and that so few have comprehended the enormity of the engineering folly and financial waste involved. In any event, the Echo Park Dam will probably be eliminated as a means of escaping the protests of the conservationists. That will leave the issue as it should be, a question of the wisdom of the proposal in its entirety.

I shall show in the text that follows that the project, despite the length of time during which it has been discussed, is ill planned in part, and in other parts not planned at all, that it is not self-liquidating, that it would involve an excessive, not to say an incredible cost per acre benefited, that the power aspects are with the possible exception of the Glen Canyon Dam financially infeasible, that in order to manufacture a case for feasibility the bills embody dubious exercises in bookkeeping, and that the national interest demands that the entire proposal should be reviewed by a genuinely independent and competent board.

MAINLY HISTORICAL

Under the famous Colorado River Compact, created to some extent through the expert and energetic efforts of Herbert Hoover, Secretary of Commerce, 30 years ago, it was agreed that the water of the Colorado should be allocated between two groups of States, with a remainder to be at the disposal of the Mexican Republic. The lower group of States include Arizona, California, and Nevada. The upper group are Utah, New Mexico, Wyoming, Colorado. I believe that it is fair to say that it was assumed at the time that the Federal Government would materially assist each group of States to regulate and store the water of the river thus allotted, in order to stabilize and conserve the water involved and for consumptive use.

The first report prepared by the Bureau of Reclamation on the upper basin of the river was transmitted to Congress by the Secretary of the Interior in 1947 (H. Doc. 419, 80th Cong., 1st sess.). This plan presented an inventory of more than 100 projects for development in the upper Colorado Basin. It was assumed that all of these could not be built, because they would require at least 25 percent more water than was allocated to the upper basin States. Their enumeration was merely an exercise in imagination by the Bureau Engineers and a showcase of selection for the use of congressional representatives from the States concerned.

Later, in 1950, the Bureau of Reclamation presented a more refined plan (the so-called project planning report, H. Doc. 364, 83d Cong.). This plan includes 10 major dams and reservoirs, the hydroelectric capacity of which was estimated at 1,500,000 kilowatts. The reservoirs named would, it was estimated, store 48 million acre-feet of water. There would be an indefinite number of water-use projects, some irrigation, some industrial, and others for municipal purposes.

It is important to note that in these various plans and in the subsequent legislative proposals based upon them with only 1 or 2 exceptions the storage units would not directly serve irrigation or other water-use projects with water directly. For the most part the dams proposed—especially the major ones—are exclusively power projects, and the reservoirs which they would create would be used to regulate the flow of the rivers involved. These dams would be dedicated to raising the revenue necessary to build the irrigation and other water-use projects. In short, the connection between such dams as Glen Canyon and irrigation would be exclusively financial.

One of the bookkeeping devices embodied in this plan would be a basin account, a fund into which all revenues would be poured for use in financing additional projects whenever possible. It is important to note that this basin-account scheme has never been specifically approved by Congress in an authorizing statute. The cost of the 1950 plan was estimated in 1949 prices at $1,408,189,000. In recent prices (1954) the cost would be $1,620,000,000.

This plan was held up during the remaining years of the Truman administration. It was halted by lack of approval of the Budget Bureau.

THE 1953–54 EISENHOWER-M'KAY PLAN

Secretary McKay in December 1953 submitted a supplemental report recommending the authorization and construction of 2 dams and storage units, Glen Canyon and Echo Park, and 11 participating projects: Central Utah (initial phase); Emery County, Utah; Florida, Colorado; Hammond, N. Mex.; LaBarge, Wyo., Pine River extension, Colorado, and New Mexico; Seedskadee, Wyo.; Silt, Colo.; Smith Fork, Colo.; Paonia, Colo.; and Lyman, Wyo. In addition, Eden, Wyo., previously authorized, was included for participation. The Secretary also recommended the Shiprock division of the Navaho project, New Mexico, subject, however, to a further feasibility report.

In March the Budget Bureau generally recommended the Secretary's program, but threw out the Shiprock-Navaho item. The Budget Bureau asked that the economic justification of the irrigation projects be reexamined before authorization. Bills were introduced embodying the recommended plan, but no final action was taken on them by the 83d Congress.

With the advent of the 84th Congress in 1955, two new bills were introduced, S. 500 and H. R. 3383. The present concern of Congress is with these. They differ in certain respects. I shall analyze and criticize each of these proposals in order.

S. 500—PASSED BY SENATE IN 1955

The bill passed by the Senate in 1955 by a vote of 58 to 23 is an omnibus measure. The Senate committee, as the result of logrolling on a massive scale, added a considerable number of projects to the plan recommended by the Secretary of the Interior in 1954. Instead of 2, it names 6 storage units—Glen Canyon, Echo Park, Flaming Gorge, Curecanti, Juniper, and Navaho. It adds no less than 21 participating irrigation projects to the 12 originally proposed by McKay and the 11 approved by the President in 1954. However, the bill states that the 21 additional projects are authorized subject to the submission of feasibility reports by the Secretary of the Interior and further action by Congress.

This sort of legislation, while it has been done before, is plainly a perversion. If a project is only vaguely justified and needs study and report by the Interior Department, why should it be named at all in a bill? In this case, the naming of the 21 additional irrigation projects and the 6 storage units establishes a moral commitment to the States and communities which would be benefited by these projects and would make further and final action by the Department and Congress more or less a formality. The total estimated cost of the various units named in S. 500 would be $1,658,460,000, of which $782,883,000 would be spent on the storage units. However, in arguing for the bill Senator WATKINS and others claim that the money represented in the bill would be only $1,092,999,800.

In a letter to Senator PAUL H. DOUGLAS on June 28, 1955, I said of this sort of legislation:

"Clearly this bill was designed by its architects to mean whatever the interested sponsor happened to want it to mean at a given moment. Specifically, it was intended to tell the people in the beneficiary States that they were to have practically every 'participating project' their hearts desired, while it was to tell anxious taxpayers in Pennsylvania, South Carolina, or Michigan that it was to cost only a billion dollars. To attempt a serious discussion of such a bill would be like trying to anticipate the humors of a coquette. You only know that she will be expensive and that she will never be satisfied."

The essential reason for this characterization was that the bill is and is not an authorization. It contains several different kinds of qualified authorizations. Four storage units seem to be conditionally authorized. Two others must have further study of various sorts and certifications.

THE HOUSE BILL, H. R. 3383

On July 8, 1955, the House Committee on Interior and Insular Affairs reported out H. R. 3383, which differs materially from S. 500. Instead of 6, it would authorize 4 storage units—Glen Canyon, Flaming Gorge, Curecanti, and Navaho. It also contains 11 "participating projects"—the ones originally approved by the Secretary and the President. Most notable is the omission of Echo Park as a concession to the conservationists and to eliminate their strong opposition to the entire project.

However, the bill directs the Secretary of the Interior to complete and submit planning reports on the 22 "participating projects" which were added in the Senate bill to those approved by the Secretary. (See p. 76 for full list of participating projects involved in both bills, with pertinent cost data.)

The House bill is only a bit more covert in its purpose than S. 500. The intent is clearly to open the way to the authorization of all the irrigation projects named in the bill. The provisions of H. R. 3383, as those of S. 500, would set in motion the machinery which ultimately would involve something like a billion and a half dollars in construction costs alone.

H. R. 3383, moreover, provides an across-the-board, arbitrary reduction of the Bureau of Reclamation's estimate by 10 percent. This has no engineering or financial justification, because in all estimates of the Bureau of Reclamation, history shows that the figures are on the low side, often by as much as 50 percent or more. The action of the committee in presenting this phony estimate is purely political. It is intended to misinform and mislead the Congress and the public.

Thus, at this writing the two bills, S. 500 and H. R. 3383, are before the House for action.

WHO PAYS AND HOW

Since the taxpayers in the 44 States which are not beneficiaries of this project are vitally concerned with the problem of how the vast expenditures from the Treasury for these projects are proposed to be repaid, and since proponents of the project assure us that it is 100 percent self-liquidating, I shall give major attention to this problem. The subject of engineering is also involved, but that is of less concern to the taxpayer remote from the scene, and I shall only briefly mention it in what follows.

This project, like practically all reclamation projects during the past 25 years, provides that the revenues from the hydroelectric projects be used to subsidize in part, and usually in large part, the irrigation projects. Moreover, in the cases where there water for industrial and municipal use, those aspects pay for themselves. The flood control, navigation, and wildlife preservation aspects are nonreimbursable. They are a Federal expense. But in the Colorado River storage project these latter purposes and allocations are negligible.

As I shall show, the main cash box from which the alleged restoration to the Treasury of the money expended is to come, is the revenue from the power aspects of the project.

The plans for repayment from power revenues in the two bills, S. 500 and H. R. 3383, differ somewhat in detail, but are alike in the patent fact that they absurdly overestimate the capacity of the power units to bear the financial load assigned to them.

Repayment in S. 500 is through a financial gadget known as the Collbran formula. It provides that the net from the power revenues is to be devoted to paying off the costs of the power aspects of the project, the dams, reservoirs, and other essential installations. This, it is estimated, will take about 50 years. After that, the net from the power revenues will be used to pay the 85 percent or so of the irrigation costs without interest, which have not been paid by the water users. The term during which that would be paid cannot accurately be estimated. It is clear from all reasonable assumptions, including the highly doubtful one that there would be any revenues at all, that the time would be 50 years or more in addition, thus bringing the period of repayment far into the 21st century.

The financial plan in H. R. 3383 would use the net power revenues first to pay the irrigation costs, without interest, of course, that the water users cannot pay. It is estimated, quite optimistically to say the least, that this repayment of the 85 percent of the irrigation costs would take about 50 years. Then, and not until then, would the power installations be repaid, with interest. H. R. 3383 provides that the power investment should be repaid within the useful life of the project, not to exceed 100 years.

The Bureau of Reclamation testified in connection with the initial (1954) plan of Glen Canyon, Echo Park, and 11 participating irrigation projects that under this plan the repayment would take a little less than 100 years. But at the same time it was stated by the Bureau's witnesses that if more projects were added the period would extend beyond

100 years. With the long list of 21 new projects envisioned in both bills, this would assume that power projects would have to be running at top efficiency for more than a century and a half. This may well be the most absurd implication ever contained in a legislative enactment.

THE CAPACITY OF POWER PROJECTS TO PAY

Among the primary and incorrect assumptions, there is the assertion that the assorted power projects, even those contained in S. 500, can pay for themselves. On this point I wish to offer the testimony of a man who first appeared in print on this subject within the month. On January 31, 1956, Robert LeRoy Cochran retired from the Bureau of the Budget. For 11 years he had been a major expert on water and other civil works projects in that Bureau. He was never called upon to testify, and it can be assumed that his wise advice was not observed by the two Budget Directors who have been concerned with this Colorado storage project. Mr. Cochran served in the State engineer's office in Nebraska for 20 years, during which he was State engineer for 12. He was elected Governor of his State in 1934, 1936, and 1938. He was raised in a reclamation country and has owned a reclamation farm for 40 years. On the basis of this unparalleled experience and his 11-year study in the Budget Bureau, he stated for publication in Newsweek (issue of February 20):

"According to the claims of the Bureau of Reclamation and the congressional sponsors of the project, the cashboxes from which most of the repayment must come are the power installations, the largest of which is Glen Canyon near the Utah-Arizona border. On the basis of the figures submitted, only Glen Canyon could be justified as financially feasible. Even if the revenues from that one dam were as good as anticipated, they would be entirely consumed in paying the deficits on the other power dams. That would leave nothing at all for the repayment of the irrigation costs during the first 50-year period.

"The analysis presented by the Department was based upon a 50-year period, generally considered to be the useful life of a project. Such a period may be too long in the light of the future potentials of power production from atomic energy and other sources."

The upper Colorado Basin has a boundless supply of energy potential in coal, natural gas, oil shale, and uranium. The steadily increasing efficiency of coal-burning plants, the availability of cheap and abundant supplies of fuel, the increasing cost of building hydroelectric installations, and the remoteness of the remaining good hydro sites from the centers of population are rapidly making hydroelectric power uneconomical. Moreover, not far in the future and well within the 50-year period which seems to be basic in the calculations of the planners of the Colorado storage project, great atomic energy plants will overtake other methods of producing electricity.

At this very moment, the immense aluminum industry which hitherto has been drawn to the Northwest because of its supply of cheap hydroelectric power is moving to the Ohio Valley because of the presence of large coal deposits and proximity of its market for finished goods.

The fallacy embodied in a plan which must depend not only upon the useful life of hydroelectric installations for 50 years but upon prices for power based upon present conditions must be obvious to all minds not benumbed by self-interest. For the revenues—highly speculative at best—from installations whose life estimate is altogether overoptimistic—must depend upon getting the same price for power far into the remote future.

It is true that in the hearings on the Colorado storage project in 1954 and 1955 representatives of the area's 10 private power companies were heard and they subscribed to the need for water storage. They also said that the companies represented would buy power generated at the projected power installations. But they qualified their promise by saying that they would take the power at a price comparable to the cost of power from other sources. The sponsors of the bill misrepresent this position of the companies by failing to mention the latter qualification, which is vital. Indeed, with the supplies of coal which are available in the very heart of the region, it is doubtful if the companies can afford even now to pay the price embodied in the estimates.

Moreover, it is not true that the market for the bulk of the power that might be generated would be the very people who would be the beneficiaries of the irrigation subsidy. The economic market for the big producer, Glen Canyon, would be in the lower basin, in Arizona and California. A representative from Arizona has already objected to the proposed power rate assigned to Glen Canyon.

The Truth About the Upper Colorado River Project—II

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 29, 1956

Mr. McDONOUGH. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include part II of a booklet recently published by the American Enterprise Association on the controversy over the proposed multibillion dollar upper Colorado River project:

IMMENSE CONSTRUCTION COSTS OF IRRIGATION

Not one single irrigation project in all of the 34 "participating projects" is financially sound. I show in the tabulation on page 76 the construction costs, the area served, the irrigation allocation per acre, and the percentage to be repaid by the irrigators for every one of the 34. If we consider the original 11 approved by the President and Secretary McKay, the cost for area served on the individual projects ranges from $200 to $800 per acre for construction alone. The water users can repay a weighted average of 17.5 percent. This average is that low because the largest of all, Central Utah, is the least feasible.

But these figures of cost per-acre fail to represent a true measure of cost, because nearly two-thirds of the acres to be served are already in production and would receive only a supplemental water supply. In most cases this additional supply would be only a few inches in depth per annum, and thus only a small fraction of the amount of water necessary to put arid land into full production. The real cost of putting enough water on an acre of land in this arid to semi-arid region would on the Central Utah project be over $2,600 an acre.

And it must be remembered that in these figures which I present in this section of my discussion, I am considering only construction costs. I am not considering interest charges on the Government's investment. I shall consider that presently.

Nor do the figures I have presented include another legitimate charge for irrigation. This is the proportion of the cost of building the storage reservoirs, which should be borne by the irrigation projects.

WHAT IS THE LAND WORTH?

As many an unlucky farmer has learned by bitter experience, the real value of his land is not what he has put into it in money and labor. It is what he can get for what he produces. The lands proposed to be irrigated in the Colorado River storage project lie at altitudes of from 5,000 to 7,000 feet above sea level. They are not in tropical or semitropical latitudes. They have a short growing season and are generally capable of producing only forage crops and grains. Land in the region, fully irrigated and improved brings in the market an average of only about $150 an acre.

THE FANTASTIC NAVAHO PROJECT

In the great propaganda campaign of the sponsors of this Colorado storage project, a colorful feature was certain ceremonial dances by Indians. It must be presumed that these shows were not wholly generated in the minds of the dancers. But considering what is planned in the project for the Navaho Indians in New Mexico, it might be added that there was indeed cause for rejoicing. In this case, however, those who did the dancing would not be required to pay for the music. The taxpayers of 44 States would account for that.

The Navaho project was, as we have seen, rejected by the Budget Bureau in its review of the 1954 version of the plan. It was reinstated in the Senate committee, according to press reports in Utah, at the insistence of a Senator from New Mexico.

As we have seen, the irrigation construction cost per acre of the Navaho project would be $1,530, the highest of all 34 projects. Of this, the Indians could repay at most less than 15 percent. It was testified at the hearings by officials of the Indian Bureau that the project would provide for 1,100 Navaho Indian family farms and that the cost per family farm would be $200,000. The same witnesses testified that the gross—not net—income per family farm would be about $5,000 a year. Since the interest charges alone on this investment per farm would, at 2½ percent, equal the gross farm income, this project would seem to be fair neither to the taxpayers nor the Indians. Certainly there might be a less expensive way to provide for these families. Certainly, according to Secretary McKay, it is not in the true interest of the Indians to keep them in subjection as second-class citizens. And there is no better way to destroy them than to support them in this costly manner. The testimony at the hearings also brought out the fact that there is among informed people grave doubt whether the Indians themselves want to farm irrigated land or whether they could succeed as irrigation farmers.

THE SUBSIDY IN TERMS OF COMPOUNDED INTEREST

Under the original plans for reclamation created more than half a century ago under Theodore Roosevelt, it was thought wise to give farmers on irrigated land a bit of a lift by relieving them of interest charges on the unpaid portion of the Federal investment. Considering the brighter promise of some of the projects initiated at that time, such as the Salt River development in Arizona, and the fact that the law contemplated repayment in 10 years, this subsidy seemed justified. However, even the projects initiated then failed to pay out, and Salt River only got itself out of debt on the original project in 1955. The cost of large additions to the Salt River project are still unpaid.

When the time for repayment was extended to 20 and then to 40 and finally to 50 years, the interest factor took on formidable proportions. But in the plans for the Colorado River storage project, even that 50-year repayment period now in the law is extended. Under the repayment provisions of the ori-

ginal 1954 plan—Glen Canyon and Echo Park and 11 participating projects—the Bureau of Reclamation estimated the interest subsidy alone to be $1,153,000,000, which was more than the estimated construction cost of the whole project. This would amount to $3,150 an acre on the 366,000 acres to be served. If there were to be added the four additional storage projects specified for authorization in the Senate bill in addition to the Navaho San Juan-Chama and Gooseberry irrigation projects, the corresponding Federal subsidy, using the same method of calculation as that used by the Bureau of Reclamation in the original project, would total $4 billion—more than $5,000 an acre on the 745,000 acres served. So much for the interest subsidy under S. 500.

Under the repayment provisions of H. R. 3383, the interest subsidy on the minimum projects authorized (4 storage units and 11 participating projects) would amount tof nearly $2 billion at the end of the overall repayment period of 99 years. However, with the inclusion of the additional projects contemplated for later authorization, the interest subsidy would be at least as much as under S. 500, but probably a much greater amount.

However one looks at the financial status of the Colorado storage project, the absurdity of the claim of "self-liquidation" stands out. If we consider the version of 1954, which was approved by the administration for an initial construction cost of about $1 billion, the interest charges at 2½ percent would be $25 million annually. For the larger plan in S. 500, the annual charges would be $40 million. The total annual net revenues estimated by the Bureau of Reclamation would be less than these amounts on the average.

These revenues, assuming that they can be realized, could be used only once. If they are used to pay construction costs, the interest charge would have to be paid by the taxpayers of the Nation. If they should be used to pay interest, the construction costs would have to be paid by the taxpayers.

At this point I wish to present the view of former Governor Cochran as set forth in the interview cited on page 52:

"Question. How then could the costs of the irrigation aspects of the project be paid back to the Federal Government?

"Answer. A small proportion (about 15 percent) of the construction costs alone would be repaid by the farmers during the first interest-free 50 years. While it is proposed that the balance (85 percent) be paid back out of the revenues of the power aspects of the plan, we have already seen that there is no validity in that claim. Payment from that source would not begin anyhow until after about 50 years. By that time, the power features might well be obsolete. It should be emphasized that there appears to be a very serious doubt as to whether any power revenues would ever be applied to the payment of irrigation costs in the upper Colorado Basin. I submit that a proposal to start payment after 50 years on a debt for any purpose is not worth the paper it is written on.

"Meanwhile, because of the high construction costs per acre of the irrigation works and the accumulating unpaid interest, the Federal subsidy would be enormous. Under the ultraliberal construction of the reclamation law by the Department, freedom from interest extends not only through the 40 or 50 years beyond a 'development' period, but indefinitely into the future.

"Something like 90 percent of the irrigation costs (including interest) would be Federal subsidy."

Reclamation Bureau officials and congressional sponsors of this project have a good deal to say about the so-called reclamation fund. This fund is supposed to provide money for this and other projects of the same nature. The inference is that there would thus be little or no charge on the taxpayer.

The fact is that the reclamation fund is largely a matter of bookkeeping. If the money in that fund were not used for unnecessary and uneconomic projects, it could be used to reduce the Federal debt or to reduce taxes.

In the beginning the fund benefited only from the sale of public land. More recently, however, the fund has been kept going largely because there have poured into it revenues from large Federal power projects. However, this money from Federal power projects includes the so-called interest component from those revenues which should properly go into the general fund of the Treasury to repay the interest charges on the Federal investment in power projects.

THE BURDEN ON THE STATES

The concern which each of the 48 States should have in this vast subsidy can be calculated by determining the percent of the Nation's tax burden which each State must normally pay, then by applying that percentage to the sums stated above. The States directly benefited, Utah, Colorado, New Mexico, and Wyoming, pay only 2 percent total Federal taxes. Thus the 44 other States must carry approximately 98 percent of the costs. Assuming a total subsidy of $4 billion, the percentages borne by the States and the amounts involved appear on the accompanying table. I have used in this calculation a list of percentages compiled by the Tax Foundation, a nonprofit research agency.[1]

Colorado River storage project—Federal cost to be borne by Nation's taxpayers, by States

State	Percent of Federal taxes by States	Federal cost to be borne by taxpayers of each State
Alabama	1.15	$46,000,000
Arizona	.51	20,400,000
Arkansas	.68	27,200,000
California	9.32	372,800,000
Colorado	.91	36,400,000
Connecticut	1.74	69,600,000
Delaware	.37	14,800,000
Florida	1.69	67,600,000
Georgia	1.53	61,200,000
Idaho	.34	13,600,000
Illinois	6.90	276,000,000
Indiana	2.56	102,400,000
Iowa	1.55	62,000,000
Kansas	1.31	52,400,000
Kentucky	1.27	50,800,000
Louisiana	1.34	53,600,000
Maine	.47	18,800,000
Maryland [1]	2.56	102,400,000
Massachusetts	3.19	127,600,000
Michigan	4.91	196,400,000
Minnesota	1.74	69,600,000
Mississippi	.65	26,000,000
Missouri	2.50	100,000,000
Montana	.40	16,000,000
Nebraska	.85	34,000,000
Nevada	.17	6,800,000
New Hampshire	.30	12,000,000
New Jersey	3.60	144,000,000
New Mexico	.38	15,200,000
New York	12.34	493,600,000
North Carolina	1.67	66,800,000
North Dakota	.30	12,000,000
Ohio	5.90	236,000,000
Oklahoma	1.12	44,800,000
Oregon	1.10	44,000,000
Pennsylvania	6.94	77,600,000
Rhode Island	.52	20,800,000
South Carolina	.86	34,400,000
South Dakota	.33	13,200,000
Tennessee	1.39	55,600,000
Texas	4.86	194,400,000

[1] Includes District of Columbia.

[1] The Tax Foundation has made these compilations of percentages each year for a long time. These percentages were not computed with this particular piece of legislation in mind, but, rather, in line with the foundation's policy of bringing home to the people of all the States the meaning of the burden of Federal taxation in these years of great expenditures.

Colorado River storage project—Federal cost to be borne by Nation's taxpayers, by States—Continued

State	Percent of Federal taxes by States	Federal cost to be borne by taxpayers of each State
Utah	0.40	$16,000,000
Vermont	.19	7,600,000
Virginia	1.69	67,600,000
Washington	1.71	68,400,000
West Virginia	.89	35,600,000
Wisconsin	2.20	88,000,000
Wyoming	.20	8,000,000

THE COSTS OF REHABILITATION

Former Governor Cochran in the course of his long service in the Budget Bureau took note of the very considerable costs incurred by the Federal Government in rehabilitating irrigation projects. Since the ditches, gates and other mechanical aspects of an irrigation project suffer somewhat rapid deterioration, the Federal Government lends a hand without charge to the water users in repairing the damage. In the interview noted above, Mr. Cochran says: "Experience with irrigation projects indicates that after 30 years or so it is necessary in a considerable number of cases to spend further money on rehabilitation. This is another large item of expense for the Federal Government."

I have not taken account of these rehabilitation costs in my analysis because it would be difficult to anticipate their amounts in a generation in which inflationary forces seem to be uppermost. But they would be considerable and they would also be borne by the taxpayers of the Nation.

BENEFIT-COST TRICKERY

Sponsors of the Colorado River storage project, unable to contradict the plain arithmetic involved in the repayment calculations which I have set forth, fall back upon a speculative hocus-pocus known as "indirect benefits." This sort of thing is a product of the new economic thinking which flourished in the 1930's. Out of it came the so-called benefit-cost ratio. While it has no standing in the law, it has been used to a greater and greater extent since 1939 by the Bureau of Reclamation in claiming economic as distinguished from financial justification of projects.

In simple terms, a benefit-cost ratio means a ratio between the various economic benefits alleged to stem from a project and its cost in actual dollars. But in order to have a ratio mean anything, the two items must be comparable. In the usage of the term by the Bureau of Reclamation and the sponsors of the Colorado River storage project, each side of the ratio is measured by quite different criteria. Hence the ratio is meaningless.

The new and radical social and economic philosophy on which this comparison of the incomparable is based has never been more brazenly stated than in a report of President Truman's Water Resources Policy Commission in 1950:

"Financial feasibility is not the same as economic feasibility. * * * For this reason the Commission is recommending that Congress eliminate the requirement that irrigation projects show financial feasibility * * * the principle of full reimbursement has ceased to be useful or necessary. The Government has come to be recognized as an agency for social and economic action which need not follow the rules of the private capital market * * * social benefits and national interests should be clearly differentiated from those for which reimbursement should be required. * * * Where the public interest is clearly established, public expenditures to promote it cannot properly be regarded as subsidies. * * * The justification for public investment in irrigation is that there are

public ends to be attained which the commercial price system cannot reflect."

Such vague terms as "social benefits," "public ends," and "national interests" can have no determination in financial terms. Their projection in calculations of reimbursability raise the question of who is to determine their value. Who is to be the judge? In this case it would be the bureaucrats who would love to spend more and more public money and the representatives of the beneficiary States. They presume to offer their own ex parte judgments. Indeed, their presumption is so great as to tell taxpayers in States far from the scene what they themselves stand to gain in selling more automobiles, carpet sweepers, and baby carriages to families subsidized at the rate of $5,000 an acre.

The Engineers Joint Council, a group including representatives of five of the great engineering societies of the Nation, had this to say of the benefit-cost ratio in a statement (Principles of a Sound National Water Policy) issued in 1951:

"(Increases in trade and commerce) have usually been computed on the gross volume of new business without recognition of the fact that there is no benefit to be derived from the mere circulation of money. Actually for such benefits to accrue there must be tangible gains to those who transport, process, and distribute goods to the ultimate consumer, all without increased cost to him."

The conclusion of the Engineers Joint Council, it would seem, must be the consensus of all people who believe in honest and understandable public accounting:

"Direct benefits should be limited to those new and increased values which are definitely measurable. Such tangible offsets to cost, under ordinary business standards, would be limited to the capitalized value or present worth of future net revenues to be derived from operation of the works constructed."

DISSENT FROM THE DEPARTMENT OF AGRICULTURE

In a review of the report of the Bureau of Reclamation on the Colorado River storage project, the Department of Agriculture seriously questioned the estimates of agricultural benefits. Moreover, the Bureau of the Budget, in reporting on the initial project recommended by Secretary McKay, specified that the econmic justification of all of the 11 reclamation projects should be reexamined in cooperation with the Secretary of Agriculture.

The Truth About the Upper Colorado River Project—III

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 29, 1956

Mr. McDONOUGH. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include part III of a booklet recently published by the American Enterprise Association on the controversy over the proposed multi-billion-dollar upper Colorado River project:

GLARING MISREPRESENTATION OF BENEFITS

One example of the abuse of the "benefit-cost ratio" is in the Bureau of Reclamation's estimates for the Seedskadee project. It is claimed that there are "indirect" benefits of $638,500, "public" benefits of $313,100, and direct benefits of $614,500. When all these are added and compared with the cost in real dollars of expenditure, a "benefit-cost ratio" of 1.46 to 1 is reached. Thus it is easy to see that if only direct benefits were considered, the "ratio" would betray the unsoundness of the project. Now let us see what these so-called indirect and public benefits are. "Indirect" benefits are "the increase in profits of all business enterprises handling, processing and marketing products from the project and profits of all enterprises supplying goods and services to the project farmers." "Public" benefits are "increase or improvement in settlement and investment opportunities, community facilities, and stabilization of the local and regional economy."

It is difficult to find a proper characterization for an agency employed by the Government to serve the interests of the Nation which could seriously place a monetary estimate upon such a jumble of indeterminates as this.

The Bureau's estimate on the Hammond project is a benefit of $41.50 per acre per year. The Bureau also estimates that the irrigation farmers on the project will be able to pay only $2.02 per acre per year for water. Thus the "direct benefits" would seem to be 20 times the farmers' ability to pay.

It should be noted that in the recent report of the President's Cabinet Committee on Water Resources Policy, which the President transmitted to the Congress on January 17, 1956, it is recommended that only direct or primary benefits be used in the calculation of benefit-cost ratios and that the evaluation period be limited to 50 years. In contrast, the Reclamation Bureau has included large indirect or secondary benefits evaluated over a 100-year period.

IS MORE CULTIVATED LAND NECESSARY?

Since vast surpluses have not only burdened the economy with subsidies running into billions but have partially darkened the farm economy with a cloud of falling prices, it has been necessary for the sponsors of such reclamation projects as these to invent a means of justification based upon pure speculation of future needs.

The favorite date when they say that the grim spectre of famine will come (unless we heed their advice) is 1975. To meet the vast appetite of 200 million people in that year, the Bureau asks that before 1959 there be authorized and initiated the irrigation of 1,400,000 new acres and that there be supplementary water provided for 1,711,700 acres now irrigated and in cultivation. For this the minimum construction cost would be $2,110,834,000—a per-acre cost of $700.

I have in my brochure, "What Price Federal Reclamation?" to which I have already referred, shown with abundant reference to authorities in the Department of Agriculture and elsewhere the utterly groundless nature of this claim for more irrigated land, in 1975 or any other year. Here I should like to call attention to another survey made from data gathered by the Soil Conservation Service of the Department of Agriculture. This shows that there now exists on improved farms nearly 21 million acres of good land lying idle in 19 Eastern, Southern, and Midwestern States. This land is neither woodland, pasture, nor publicly owned. It is located in regions where there is plenty of rainfall and, in most States, where the growing season is much longer than in the upper Colorado region. All that might be needed to bring this land into cultivation would be an expenditure of from $50 to $150 an acre when and if there is need for more food and fiber. The distribution of this presently existing soil bank is as follows:

South

State:	Acres
Alabama	823,564
Arkansas	2,723,547
Kentucky	671,673
Louisiana	2,487,300
Mississippi	1,270,691
Tennessee	279,563
Total	8,256,338

Southeast

State:	Acres
Florida	2,037,392
Georgia	972,748
North Carolina	4,264,763
South Carolina	492,309
Virginia	919,307
Total	8,686,519

Midwest

State:	Acres
Illinois	627,185
Indiana	231,780
Michigan	1,761,390
Minnesota	564,702
Ohio	491,098
Wisconsin	124,133
Iowa	50,759
Missouri	143,249
Total	3,994,296
Grand total	20,937,153

This, I repeat, is a soil bank already in being. But with production bursting at the seams on the land already cultivated, this reserve need not be touched for years to come.

Indeed, the necessity now faces the Congress to put more millions into the reserve. This is what is meant by the "soil bank" plan submitted by the President to Congress. That would retire 40 million acres which are now in cultivation. This will mean that between the American people and the famine portrayed by sponsors of more irrigation, these are no less than 61 million potentially productive acres.

Even to consider irrigating the 1,228,000 acres in the Colorado Basin contemplated in S. 500 while we are attempting to eliminate 40 million that we don't need is a matter so irrational as to suggest that it could happen only in the mystic land of political legislation, the land in which regional and bureaucratic ambitions are paramount and the national interest is forgotten.

But the proponents of this project have apparently convinced some people, including themselves, that the crops to be raised upon these high arid slopes are a very special kind of crops—rare, exotic, never to be in surplus, and highly essential to the Nation's welfare. The reality is that the produce to be raised will be just like the crops that are raised on millions and millions of acres now in cultivation. They are mostly grains, dairy products (from the cattle which eat the forage which is to be raised on the land and which the proponents say is not in surplus), and wool (from the sheep which also partake of the said forage).

ENGINEERING DOUBTS CONCERNING GLEN CANYON

My analysis of the economic and financial aspects of the proposed upper Colorado River project presupposes that the Bureau's engineering plans and cost estimates based thereon are adequate. However, it appears that there are physical and geologic problems in connection with Glen Canyon—the major storage unit—which cast doubt on its engineering and financial feasibility.

The geologic formations along the walls of the reservoir pose two problems. First, there are huge formations of pervious sandstone which might cause such large losses of water from the reservoir as to seriously depreciate its conservation value and curtail anticipated power production and reve-

nues. Secondly, there exists along some 50 miles of the reservoir a formation known by geologists as "Chinle shale," overlain by massive sandstone. This Chinle disintegrates into mud on contact with water. Thus when the reservoir fills, the entire mass of Chinle and sandstone overburden would be precipitated into the reservoir—with possible adverse effects on the functioning of the reservoir.

In addition, there is the serious problem of providing adequate protection of the world-renowned Rainbow Natural Bridge. The reservoir as planned would back up close to the arch and endanger this fragile structure of soft sandstone. Thus far, no adequate protective plan has been perfected and there is doubt that the cost of protective features is provided for in the cost estimates for this dam.

Finally, there is doubt as to the adequacy of the plans for Glen Canyon Dam on which the Bureau's cost estimates are based. Comparison with Hoover Dam which is about the same height indicates that a much more massive structure than now planned would be needed to secure a safe dam, involving a much greater construction cost than estimated.

The engineering and financial feasibility of Glen Canyon storage unit remain uncertain until these doubts are resolved.

THE REPORT OF THE PRESIDENT'S CABINET COMMITTEE

Nearly 2 years ago, when the Colorado Storage project first became a matter of national concern and the Hoover Commission's task force began to survey the problem of water conservation, the President appointed a committee on the general subject, no doubt to guide him in passing upon the demands upon the Federal Treasury. That committee consisted of Secretary McKay, chairman, and Secretaries Benson and Wilson. Their report, which appeared in December 1955, if scrupulously followed by the administration and heeded by Congress, could do a great deal to rationalize the Government's reclamation policies.

It proposed that State and local governments share the cost of water projects. That is exactly what I would suggest.

It also proposed that there be set up "an independent board of review * * * to analyze the engineering and economic feasibility of projects and report to the President." That would indeed be a step toward rationality. It is what many of us have been talking about for a long time. The only advice the President can now get officially is from a bureau whose propaganda in the past has completely discredited any standing it might have for impartiality, accuracy or concern for the public interest and from Congressional committees stacked with members from the beneficiary States.

The President's Committee also proposed that in setting up reclamation plans and estimates, interest should "be shown clearly as a Federal cost." In short, that all the cards be laid on the table when a project is presented to Congress. Hitherto this charge, which I have shown herein to be immense, has only been given when some Member of Congress has pried it out of the representatives of the Bureau.

This interest charge, since it is a vital, not to say the vital, element in determining the justification of reclamation projects, has always been hidden as much as possible by proponents. This recommendation of the committee hit a vital spot in the defense of the upper Colorado project. For a Congressman from Colorado, WAYNE N. ASPINALL, immediately objected, saying that "if they did not favor the elimination of the interest charge immediately after adding it to the cost of construction, there wouldn't be a reclamation project in the United States that would be economically possible." The Congressman in that simple statement has eloquently summarized practically all of my argument here and in everything I have written on the subject for years. It is a confession of the utter weakness of the case for this project.

A TRUE PARTNERSHIP

There is a strange claim by some proponents of the Colorado River storage project that they are supporting a partnership plan such as has been advanced as an administration policy in the Northwest. There is no resemblance at all. The party of the first part, the Federal Government, is paying for the entire project and is constructing it. The parties of the second part supply the arid land. I favor, with the President's Cabinet Committee and with the earlier report of the Hoover Commission, a true sharing of the responsibilities in this project.

I have never contended and do not contend now that the four States in the upper basin are not entitled to the share of the water of the Colorado and its tributaries which was specified in the Colorado River compact. Nor do I deny that the Federal Government should build the means to store that water when needed. For the Federal Government by long prescription has assumed the responsibility of regulating the flow of interstate rivers. But this does not mean that the Government should build huge storage dams unless and until needed for water conservation and regulation.

Beyond that, I do not believe the Federal Government has an obligation. The power companies of the region which offered their testimony to the effect that there was a market—at a price—for the power should finance the power aspects of the storage dams themselves and dispose of the power where such storage dams can be justified. That is exactly what the Eisenhower-McKay partnership policy means, as illustrated by the proposed John Day Dam on the Columbia River.

Moreover, those cities which are in need of water for domestic purposes should provide the means of getting the water from the storage reservoirs. Finally, those industrial companies which are in the area and which are now so eagerly seeking subsidized water, should provide the means of getting the water for themselves. In short, the Federal Government should provide storage for the water as needed, and the users should go and get it. This would be true of the irrigators who are in need of supplementary supplies and those people—unnamed—who are anxious to try their fortunes on new irrigated land. This could be done through the States concerned if—and this if is very large indeed—the bestowal of water will indeed produce the wealth which proponents of this project claim. So far as the Navaho Indians are concerned, surely a Government which has been engaged for a century or more in caring for and regulating the life of these natives can provide a less expensive way to make them self-reliant than to set them up on farms at a cost to the taxpayer of $200,000 a family.

THE ISSUE IN MORALS AND EQUITY

If the issue were a simple matter of taking from rich States and giving to poor States, there might be a case despite the financial, engineering and economic factors which I have mentioned. But these are not needy States. Their potential wealth is considerable, and their well-being is reflected in all that they pay for the benefit of the outside world. On the basis of per capita income, they rank with the average among the States.

There is, moreover, a final consideration. It can be shown that the propaganda of the Federal Government for reclamation has in innumerable cases imposed a cruel hoax upon the farmers who attempt to cultivate the land. Indeed, the progressive lengthening of the payout period from 10 years in 1902 to 20 years in 1914 to 40 years in 1926 to 50 years in 1939 has been in response to the cries of distress of the unfortunate farmers and their congressional representatives. Since I have been writing about this subject over the past 2 years, I have received pathetic letters from farmers whose state of affairs has progressively turned to the worse. Despite the immense amount per acre that it takes to put water on arid land, the cultivation of that land and the management of the irrigation itself is a heavy burden upon the farmer. It is time to play fair with these farmers, as well as with the taxpayers of the 44 States in whose interest this discussion of the Colorado River storage project has been written.

Colorado River storage project—Participating projects

Project	Project construction cost (in thousands)	Total area served (acres)	Irrigation allocation per acre	Percentage of irrigation allocation to be repaid by irrigators
1. La Barge	$1,673	7,970	$210	29.6
2. Seedskadee	23,272	60,720	383	20.6
3. Lyman	10,564	40,600	260	21.3

Have We Let Soviet Take Lead in Missile Field?

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 29, 1956

Mr. PRICE. Mr. Speaker, in the forthcoming issue of Collier's magazine, Hanson W. Baldwin, the military editor of the New York Times, presents one of the finest and clearest pictures of our problems and programs for the intercontinental ballistic missile I have seen to date. Mr. Baldwin outlines with cold sober precision the effect of this ultimate weapon on our international policy of survival and the extreme dangers we now face in having fallen behind in this race for deterrent power. He has not sought to place the blame for this situation and he has not tried to lull us into a false sense of security by poohpoohing the basic facts. He has done us a great service in digging up and presenting the cold facts as they are and drawing their logical consequences. The door of public understanding of our position has finally been opened.

In the same issue the editors of Collier's go one step further in an editorial entitled, "There Can Be Too Much Secrecy," and point up one of the most disquieting aspects of the entire subject. Why has it taken so long for the United States public to be informed on our failure to keep up in the race? Why were the alternatives not presented to the people at a time when a decision made by them could have kept us in the lead. The editors of Collier's state the clearest democratic truth that—

The security of the United States is the primary, but not exclusive, concern of our elected representatives and our appointed military leaders. The great outlines of our defense policies and a broad knowledge of our relative defensive posture should be known not merely by a small group of leaders, but by all citizens. In a democracy, in a free society based on the wisdom and judgment of all its members, the final great decision must be made by the Nation as a whole.

This is apparently a philosophy foreign to the minds of our current administration. The ICBM is not the only example of deceit, duplicity, and double talk by an administration which places budgetary considerations above the risks of national survival, but it is one of the most alarming. I would like to call the attention of my colleagues both to Mr. Baldwin's article and the thought-provoking editorial which accompanies it:

ICBM

(By Hanson W. Baldwin)

It will not be long. In 10 years, 5 years, perhaps only 2 or 3, the historic countdown will start: "Ten, nine, eight, seven, six, five, four, three, two, one." At zero a new era will open up on the earth the era of push-button war. A giant rocket, 100 to 135 feet high, will lift slowly from its launching pad and, with voice of thunder, tongue of flame disappear into the stratosphere. Some 20 to 30 minutes later and 5,000 miles away, the world's first intercontinental ballistic missile will plunge toward the earth.

Where will it come from?

It could be launched from Cape Canaveral, Fla., at the United States Air Force Missile Test Center, to splash harmlessly into the South Atlantic near Ascension Island.

Or, the missile might be launched from a Russian desert to arch, in unseen ellipse, high above the uninhabited tundra of the north.

It will make a difference, at most, the difference between peace and war; at least, the difference between added security for the West and possible Communist domination of more of the world.

Dubbed ICBM in our research laboratories and Pentagon offices, the intercontinental ballistic missile has been called the ultimate weapon. This giant ocean-spanning, mountain-leaping rocket, mated to a hydrogen warhead with a destructive capability of megatons (millions of tons of TNT), is a supreme instrument of offense. It arches so high (600 to 800 miles above the earth), and moves so fast (12,000 to 16,000 miles an hour) that, once it has been launched, defense against it will be nearly, if not entirely, impossible. The German V–2, the small 200-mile range forerunner of the ICBM, bombarded London during World War II, and even the conventional explosives then used in the warhead caused thousands of casualties and blew whole buildings apart. The ICBM will, when developed, threaten every city on earth, not merely with damage but with destruction.

The implications are frightening, and sobering. In the early period of the coming ICBM era, before radar missile-detection and possible antimissile defenses are developed, an enemy could probably devastate the United States with a surprise ballistic missile bombardment before we could even detect the attack, much less before we could launch a retaliatory attack. One or two missiles for each of our 50 biggest cities might cause 10 million to 50 million casualties, knock out perhaps a third of our industrial capacity, and turn parts of America into radioactive deserts.

But if we beat Russia in the race to develop the first practical ICBM, the weapon could be still another deterrent to nuclear war and to overt, large-scale armed aggression of any sort. Our capability of retaliation against aggressors would be considerably increased; the aggressors would have certain knowledge that they might have to pay a very high price indeed.

How is the race going?

No one—in Washington or Moscow—can answer that positively. "We just don't know," a high United States official says.

But many of our intelligence officials and some of our scientists believe Russia leads today. The Communists are not ahead of us across the whole broad band of the missile spectrum. We don't think Russia has anything to equal our Nike or Terrier antiaircraft guided missiles, or the Army's short-range surface-to-surface bombardment missile, the Corporal. We are fat with other good missiles—air-to-air and ship-to-shore.

But in the field of long-range bombardment missiles—in which the ICBM is the ultimate objective—the Russians seem to be off to a head start. There is unmistakable evidence that last year they tested an intermediate-range ballistic missile—a bombardment missile of unknown accuracy but with a range of at least 800 miles, far greater than that of anything we have yet fired; a missile which is clearly a first cousin to the ICBM. Moreover, Senator HENRY M. JACKSON, chairman of the Military Applications Subcommittee of the Joint Congressional Committee on Atomic Energy, warned in the Senate last month that "there is a danger" the Soviets may fire a 1,500-mile ballistic missile before the end of this year. Possession of even these two intermediate weapons would give Russia the means to bombard from her own territory most, if not all, of our allies in Europe and Asia—the means perhaps to blackmail them into throwing in their lot with the Soviet bloc, denying us their bases and isolating the United States.

The truth is that the Russians have emphasized the finished hardware, and they are getting it. We have emphasized research and refinements, and ultimately this approach may pay off. However, our policy has been questioned within the administration itself; last month Trevor Gardner, who has urged a bigger, faster missile program, resigned his post as Assistant Secretary of the Air Force for Research and Development as the culmination of his long disagreement with the Pentagon on that subject.

Policy disputes aside; there is little doubt that time is important. We are coming into the homestretch of the race. In a year or so—perhaps less—the first earth satellites will be launched into outer space, and Russia may put hers upstairs first. The earth-satellite program, despite the general scientific knowledge it will produce for all, is really a dress rehearsal for the ICBM so far as the launching phase of the program goes. It will supply, too, some data—much needed for calculating accurate ballistic trajectories—about nature's unknowns in space. So the heat is on.

Last month Defense Secretary Wilson took cognizance of the need for speeding up our efforts by announcing that he shortly would name a special assistant to direct all our various ballistic-missile projects.

"We have always been under pressure," a misisle scientist working on the ICBM says—"only more so now. We cannot afford to believe in a 20-year peace; we have to pace our development as if war were just around the corner."

We must learn, then, whether we like it or not, to live with the ICBM, and hence we must understand not only what makes it tick and how it fits into our military armory, but what effect its development will have upon war and peace, strategy and society.

Let's suppose, for a moment, that the worst happens and Moscow does win the race for the most powerful offensive weapon known to man. The Soviet advantage would be temporary—and brief. No matter who wins the race, the other power will not be far behind—6 month, 1 year • • • 3 years. Moscow, then, would have a transitory advantage in offensive delivery capabilities, a temporary monopoly of long-range ballistic weapons. But this could not be "absolute" advantage; the ICBM won't cancel out all other offensive and all defensive systems, both active and passive. It won't mean world domination for the Kremlin—unless Russia also develops a virtually airtight defense against all other nuclear-explosive delivery systems, well-nigh an impossibility.

But Russia with an ICBM would be like a bully with a really big stick. Regardless of whether he used it, he would have the means to throw his weight around dangerously—and the other boys in the block might go out of their way to avoid offending him.

To the present Communist advantage of superior land power, then, the ICBM would add a temporary—though definite—qualitative superiority in the air offensive.

I don't agree with those prophets of doom who hold that a Russian monopoly of the ICBM—even though short-lived—would enable Moscow to accomplish her objective of absolute world power. It is true, and it is a frightening thought, that if Russia wins the ICBM race, some of the tough men in the Kremlin might (figuratively) push a button and destroy New York. But Moscow has the capability of destroying New York today—though with far more difficult and less certain methods. And Russia could not hope to escape heavy retaliatory damage, whether or not we had developed the ICBM, for the intercontinental ballistic missile will not automatically replace all other ground, ship, and air-based weapons. Short- and intermediate-range missiles and piloted planes, some of them firing aid-to-ground missiles like the Rascal, would still pack a powerful offensive punch. Some of these would get through, no matter how good the Russian defenses.

What might happen if Russia wins the ICBM race is suggested by the events that followed her conquest of the atom, when she broke our atomic monopoly. Her diplomacy became bolder; the Reds were more willing to take a chance. They started a war in Korea, got tough in Indochina and off Formosa. Right now, they are getting tough in the Middle East.

In other words, the Soviet political and psychological offensive would be greatly strengthened. Many of the world's peoples are band-wagon jumpers; they want to be on the side they think will win. We can depend on Soviet propaganda to exploit to the full a Soviet victory in the ICBM race. The Russians would be certain to hammer on the theme that the Soviet Union has displaced the United States as the most advanced industrial and technological nation in the world. The resultant loss of face for the United States could be damaging for the cause of freedom.

Furthermore, just as Soviet diplomacy would be strengthened by the new weapon, so ours—if we didn't have it—would be correspondingly weakened. Without the power of full retaliation, it would take a bold President and a bold Secretary of State to stand completely firm against Communist aggression and Soviet demands if our military leaders advised them that Moscow could destroy 20 major United States cities and pulverize our industrial plant in half an hour.

So, in my opinion, while a Russian victory in the ICBM race wouldn't mean all-out nuclear war or Communist world domination, it would mean a very critical period, indeed, in which United States diplomacy—already behind the eight ball in many parts of the world—would be still further handicapped. The danger would be that during this period Russia might make very large political-economic-psychological gains which would prejudice our future global position. The danger would be that Russia might press her campaign for the world to a point where another small war—like Korea or Indochina—might start, with unknown ultimate consequences.

What is the story behind the development of this amazing missile which can change the course of history?

The arms race today and tomorrow is centered around carriers of nuclear weapons rather than the weapons themselves. The world already has a whole family of A-weapons; it has about maximized weapons of destruction. The race now goes to the side that first develops the most efficient carriers for nuclear weapons: planes, ships, submarines—and missiles.

If any one man deserves the title of "Father of the Ballistic Missile," he is Dr. Wernher von Braun, a dynamic young German-born scientist. During World War II, he headed the German scientific team at Peenemünde which developed the granddaddy of the ICBM—the V–2 rocket, used against London. He and many of his countrymen were recruited by the United States Army after the war and brought to the United States to help develop our missiles. Now American citizens, they are an important part of the Army's missile-development team at Redstone Arsenal, near Huntsville, Ala.

To this group's pioneering research has been added a vast volume of basic and developmental work by United States scientists and engineers. As a result, the United States is already flying medium-range and long-range surface-to-surface bombardment missiles—all of them to date, however, operating in the earth's atmosphere and hence relatively easier to intercept than the space-flying ICBM. The United States Navy's Regulus, the Air Force's Matador—both of them small pilotless planes, with ranges of about 500 miles—are much improved versions of the German V–1 pilotless aircraft which bombarded London prior to the development of the V–2. Drone planes—really a form of guided missile—have flown coast to coast with their own self-contained navigation system.

The Snark—the first of this Nation's intercontinental-range guided missiles—has been test-fired at Cape Canaveral on Florida's east coast, and Northrop Aircraft Co., its developer, is reported to be about to receive a production contract. The Snark is a pilotless plane, powered by a turbojet engine, and it flies at aircraft altitudes and speeds (under 50,000 feet, 500 to 600 miles an hour) for about 5,000 miles.

The Navaho, North American Aviation's contribution to the armory of intercontinental war, is still in the development stage. Powered either with a turbojet or with a ram-jet engine, it is designed to fly higher and faster (50,000 to 75,000 feet and 1,000 to 2,000 miles per hour) than the Snark.

But all these missiles are really pilotless bombers, not intercontinental artillery like the ICBM. In fact, the wingless ballistic missile differs from a conventional artillery shell only in that it has its own integral propulsion system and can be guided from the ground in at least the initial stages of its flight. The path of a long-range artillery shell is an arc looping high into the air, then curving downward toward the target. A long-range ballistic missile follows the same elliptical trajectory—but loops into outer space and covers a few thousand miles instead of a few thousand yards.

By contrast, the long-range winged missiles now in use all follow so-called "cruise" or flat trajectories. Like piloted planes, they take off from runways, ramps, catapults or other launching rigs, climb to cruising altitude and level off. They are limited in speed, altitude and trajectory, by the need of their engines for the oxygen in the atmosphere and by their dependence on their stubby wings for lift. These limitations mean that missiles like the Snake and Navaho can be intercepted by fast piloted planes or by other missiles.

The ICBM—because it follows a ballistic trajectory outside the earth's atmosphere, because it flies so high and so fast—may become the world's first unstoppable weapon. Scientists envisage, in theory, a system of automatic tracking and intercepting missiles which might in time make possible a small "kill rate." But the time between launching and impact is so short, the technical difficulties so immense, that any such defense system is a long way off. Furthermore, even when it is developed it can never be more than fractionally effective—and that just wouldn't be enough. Only a few ICBMs would have to get through to knock out our own principal cities—and a good part of our warmaking potential.

Imagine trying to hit an artillery shell in midflight with another artillery shell. This is—in minuscule—the problem of intercepting an ICBM. The expensive and extensive radar, interceptor and missile-defense system we are now so hastily and painfully erecting will be of little use against the ICBM. We cannot even track a giant rocket through its entire ballistic trajectory with our present early-warning and control radar—much less intercept it. The ICBM represents, for the immediate future at least, the ultimate triumph of the offensive in war.

Russia's probable lead in the ICBM race can be traced in part to the way in which the Soviets were able to capitalize on the preliminary work done by the Germans in World War II. While Von Braun and a number of his colleagues came over to the West, the Soviets seized the Peenemunde station itself and found a number of V–2 production lines more or less intact. Recruiting those scientists who had not already fled to the West, the Reds started up the production lines again, stockpiled V–2s and, as time went on, gradually improved the range, accuracy, and performance of the missiles.

On the other hand, our immediate postwar effort in missle work was centered on basic research and preliminary development. We carried out a series of test-firings of V–2 type rockets and other research vehicles at the White Sands Proving Ground in New Mexico, and awarded research contracts to a number of companies and universities. Not until the Korean war started did we attempt to turn basic knowledge into finished hardware, and even then the emphasis was more on the pilotless-plane-type missle than the ballistic kind.

Then, more than 2 years ago, Assistant Air Secretary Trevor Gardner built a fire under the ICBM. Such a missle had been under consideration ever since World War II, with Convair doing research and design studies, part of the time at its own expense. But a missile is very different from an airplane, and rather "early on"—as the British put it—Convair encountered some of the same difficulties other aircraft companies have since met in attempting to adapt to missle work. The ICBM studies, therefore, were more or less inchoate until Gardner appointed a scientific committee in 1953 to study the project and make recommendations. This committee—and another later—not only found that an ICBM was feasible, but laid the groundwork for the present high-priority organization.

That organization is centered around a specially created western development division of the Air Research and Development

Command, with headquarters at Los Angeles. Here, Maj. Gen. Bernard A. Schriever of the Air Force, with the aid of a sizable staff and of the Ramo-Wooldridge Corp., is directing the development of the ICBM. (Dean Wooldridge and Simon Ramo are two brilliant young physicists who did some trailblazing work in electronics, while with Hughes Aircraft, on the Falcon air-to-air guided missle and on various Air Force fire-control systems.) An advisory committee, including Brigadier General Charles A. Lindberg and headed by the famous scientist Dr. John von Neumann, "kibitzes" and monitors progress.

Last year, the effort was broadened to a dual and competing approach. While Convair continued to develop its Atlas project, the Glen L. Martin Co. is attempting a different approach to the air-frame and configuration problem in a separate program. Companies working with Convair or Martin on propulsion matters include North American, Aerojet-General division of General Tire & Rubber Co., and Reaction Motors; while General Electric, Bell Telephone Laboratories, Sperry Rand, Bendix, AVCO, AC Spark Plug Division of General Motors, and American Bosch Arma Corp. are among firms assisting in solving guidance and other problems.

The United States has also entered—belatedly—the intermediate range ballistic missile race. The Air Force has a project of its own underway, and the Army and Navy have begun a joint high priority program centered at Redstone Arsenal under Maj. Gen. John Bruce Medaris and Dr. von Braun; their missile will be for both ground and shipboard launching.

All these competing projects will exchange technical data; a great increase in funds is to be provided in the next fiscal year, starting July 1, and in mid-1957—the year, incidentally, in which the United States hopes to launch some earth satellites into the upper atmosphere—the entire project will be reviewed. After considerable hesitancy and delay, the United States ballistic missiles program at last appears to be in high administrative gear.

But the technical problems are still immense, especially as they apply to the ICBM. Imagine a giant rocket—a Gargantuan version of a Fourth of July skyrocket, more than 100 feet high, weighing more than 100 tons—hurled to an altitude of 600 to 800 miles above the earth into a region of no air. Then envisage, if you can, the warhead or nose of this huge gadget slanting downward through the denser atmosphere—speeding at 15,000 miles an hour toward a target a couple of thousand miles away. How can you hit anything with such a long-range weapon? How do you even get this great mass to budge from the earth?

It can be done. One expert has said, "The missile can be built with the scientific knowledge now available, but basic research will enable us to do the job better. The work ahead is chiefly engineering."

There are three primary problems (and thousands of subsidiary ones) that collectively make up the problem of the ICBM. These are propulsion, guidance, and heat or reentry.

"It is going to take much or most of the engine development of the country to get the ICBM upstairs," a scientist predicted in outlining the propulsion problem.

The world's fastest rocket today probably loafs along at 4,000 to 5,000 feet per second. The Atlas (Convair's name for tme ICBM), if it is to travel 5,000 miles, will have to be moving in its first stages 5 to 6 times as fast, or 20 to 25 times the speed of sound.

The engines that will give the ICBM this "oomph" are rocket engines; they spew hot gases out of an exhaust in the tail and the reaction lifts the rocket. They differ from other jet engines in that they run on chemicals and carry their own oxygen with them to permit combustion. The fuels can be either liquid or solid. The V–2 used a combination of alcohol and liquid oxygen; the Army's corporal guided missile—a battlefield weapon with a range of under 100 miles—uses an acid-aniline combination.

Liquid fuels—chemicals in all sorts of combinations—produce a higher impulse, a greater thrust, than solid fuels, and they can be more easily "cut off" (combustion stopped) at a desired point in flight. But they are volatile, explosive and hard to handle, and the rocket engines that use them require a lot of "plumbing" in the form of piping. Solid propellants—really powder in various forms—haven't yet equaled the "kick" of the liquid fuels, and cutoff control is more difficult. But they are simple, reliable, rugged and give promise of providing a somewhat slower but more even acceleration.

Another potential fuel of great promise for the future (but unlikely for the first models of the ICBM) is fissionable material. A very small nuclear pile to heat and expand some type of gas might ultimately prove to be the most efficient type of propulsion for an ICBM.

But the ICBM's first rocket engines are likely to be powered with liquid fuels, or perhaps with liquids and solid propellants in combination.

A single rocket motor big enough to lift a hydrogen warhead sufficiently high for a 5,000-mile range has not yet been built. On the other hand, engines now under development could be used in multiple to provide the total thrust needed. The earth-satellite program (which really serves—in its launching phase—as a sort of "dry run" for the ICBM) will depend upon a multistage rocket for launching. Two liquid-fuel rocket engines will be connected in tandem. The first "stage" will lift the entire device rapidly into the skies; when its fuel is exhausted, a servomechanism will detach it from the main body, and the second "stage" will take over. Finally, at the apogee (top) of the trajectory, some 200 or 300 miles above the earth, a solid-propellant engine will tilt the satellite on its side and give it a final "kick" up to 30,000 feet per second in a path parallel to the earth's orbit. Thus, the earth-satellite launching program will probably involve what is called a "three-stage" rocket—three rocket engines connected in tandem, one behind another—the power of all of them used successively to get the satellite to the required speed and altitude.

The advantage of the staged rocket for the ICBM is obvious; speed increases as bulk and weight decrease, until finally the warhead—on its own and with all its propulsion mechanism dropped behind it—follows a ballistic trajectory, like an artillery shell, to its target.

Rocket motors thus can be linked in tandem, or stages, to provide the boost needed to put the warhead upstairs. Each stage would function successively; as each used its fuel and was detached the rocket would become lighter and lighter and its speed greater and greater.

But rocket motors can also be linked in parallel—or radially, like the cylinders of a radial gasoline engine. This so-called "honeycomb mesh," or "six-shooter-revolver" configuration, could also be arranged so that one or more of the engines would be detached from the central cylinder and would drop off when it had done its job.

No one yet knows which configuration—tandem or parallel motors—offers more promise; both can and probably will be used. But the ultimate ICBM will almost certainly be—as experts see it now—a staged rocket, perhaps 1½ or 2 propelling stages with the warhead on top.

That brings us to the second major problem—guidance. Like the jabberwockian talk of Alice in Wonderland, there have been a lot of semantics used to define guided missiles. One might ask: When is a guided missile not a guided missle? The answer would be: the ICBM. It will be guided only for about the first 300 miles of its 5,000-mile flight.

Imagine a gun barrel about 300 miles long. This represents the "guided" part of the ICBM's trajectory—the burning time when the rocket motors are functioning and accelerating the warhead for its 4,700 miles of free flight. Up until the last rocket-motor stage falls off, some control, some guidance is possible; after that, no human effort is likely to modify the ICBM's trajectory.

The guidance of the ICBM simply endeavors to put the warhead on a proper course at a proper speed at a fixed predetermined point in space. This is done primarily in two ways. The course and speed required to reach a fixed and known target are precalculated (as they are prior to the firing of an artillery shell), the amount of fuel and acceleration needed is determined, and the servomechanisms which will automatically cut off the fuel supply at the right point are adjusted before firing. Similarly, control mechanisms which will tilt the rocket toward the correct great-circle course can be preadjusted. These mechanisms can take two forms. The German V–2 rocket used graphite control vanes which were set in the blast of the jet stream; the angle at which these vanes were set deflected the jet blast and tilted the rocket. The United States Viking rocket, on the other hand, changed the angle of the jet blast by tilting the entire rocket motor.

In addition to careful prefiring calculations and adjustments (called "programed guidance"), some electronic control over the rocket during its climb into the blue-black emptiness of outer space is possible. The rocket is fitted with a so-called "transponder," or radar beacon, and its course during the 300 miles of guidance is tracked by ground radar. The data recorded is fed into computing machines, which immediately determine whether or not the rocket is on its predetermined course. If it is not, a new course is calculated by the machines, the correction flashed by electronic waves to the rocket, and servomechanisms deflect the jet stream and tilt the rocket, shut off, open, or regulate the fuel flow. If the rocket promises to be a "wild" one (like one of our test V–2's which went the wrong way at White Sands Proving Ground and landed across the border in Mexico), a self-destroying mechanism can be activated.

This limited guidance for the ICBM may in time be supplemented. A system of so-called inertial guidance, or automatic self-navigation, now applicable to cruise-type missiles like the Navaho, can be tailored to the propulsion stages of the rocket, and—perhaps—to the warhead to keep it in the proper flying attitude during its free flight. A so-called terminal guidance system, which would take over when the missile was approaching its target and would attract the missile to the target by light, heat, or infrared, might also have some future application to the ICBM. But the difficulties would be enormous.

The ICBM as now envisaged, therefore, is subject in free flight to the whims and vagaries of nature. And some of these are irregular and variable—one reason why the ICBM will never be a "bomb in a pickle barrel" weapon, but essentially a weapon of limited accuracy for area bombardment.

There are three groups of errors which affect the guidance of an ICBM, and none of them is easily susceptible to correction.

The first of these categories might be called "errors due to nature." There is a constant and unpredictable fluctuation in the thickness of the ionospheric layers of the atmosphere which influences the propagation of radio waves through space, and hence the accuracy of any electronic guidance systems.

There is, moreover, no way to predict variable changes in the direction and strength of gravitational forces, which could tend to pull an ICBM off course. And, finally, the earth's rotation—long considered a constant—has been found to change unpredictably and without uniformity; such a change could cause a missile properly launched to score a clean miss.

The second category of errors are instrument errors. These are more susceptible to human control, but will probably never be eliminated completely. Tiny errors at launching—and during the 300-mile gun-tube guidance phase—are multiplied geometrically by the long range to enormous errors on impact. An error in speed of 1 foot per second at the time of combustion cutoff could cause an error of 1 mile on impact.

The third category of errors are errors of mapping and surveying. To put it baldly, we don't know where the true north is, or where, say Sverdlovsk is. The ICBM follows a great-circle course from launching point to target. If it is to hit we have to know exactly where—on the earth's surface—the two points are. This is not as simple as it sounds; one of the great problems of missile warfare is the incorrect coordinates of many of the cities and points on earth, particularly those in Russia. Many of the world's maps are in error, especially those that show the vast area of the Soviet Union east of the Urals.

If the coordinates given on your maps and charts are in error you will miss. This may be one reason, incidentally, why the Russians are hostile to President Eisenhower's mutual aerial-inspection proposal. They know we don't know the exact location of cities and industries east of the Urals, and they know there is probably no good way for us to find out except by a great remapping job.

All these categories of errors, many of which appear unpredictable, mean that the ICBM will have to compensate for its inaccuracy by the frightful power and the extensive destructive effect of the explosive it carries, the hydrogen warhead. Just how inaccurate it will be no one now knows; the first ICBM obviously will be far less accurate than later models. An error of 1 percent in 5,000 miles, a figure once discussed, could mean that the missile might fall 50 miles from the target. That, scientists and military men agree, is not good enough. Scientists seem to believe that ultimately they may be able to reduce the circular error at 5,000 miles' range to 5 to 10 miles, provided the target is where it is supposed to be.

Dwarfing the tremendous, though, soluble, problems of propulsion and guidance, virtually all scientists agree, is the problem of heat generated by skin friction when the missile reenters the earth's atmosphere. Meteors that constantly bombard the earth nearly all burn up and disintegrate long before they reach the surface; the tremendous heat generated by their passage through the earth's atmosphere destroys them. The ICBM will be, in effect, a meteor; it will be hurled into upper space, and then fall back at high speeds into the denser lower atmosphere. The denser lower air will slow it up, perhaps down to Mach 2 or 3, but also it will heat and perhaps burn it up. In fact, the skin friction caused by the passage through the atmosphere will be so enormous that until some way is found of absorbing, or draining off, or neutralizing this heat, no intact ICBM will reach the earth.

This is a problem for metallurgists, chemists, physicists and a half a dozen other specialists with long names, like aerothermodynamicist. It is a giant problem, in fact, the major problem of the ICBM today. Reentry temperatures might, for example, reach 6,000 degrees or more, and today most of our low-carbon alloy steels lose their strength at about 1,000 degrees.

There are several approaches to this problem—and they are all being tried. You can try to slow the missile up—with wings or spoilers or some similar devices—and thus reduce the temperatures. You can plunge right on through, reducing the duration of heating, though increasing the temperature. You can try ceramic skins, or porous or sweating jackets, which exude moisture for liquid cooling. You can devise higher-temperature alloys. Or you can take a leaf from the lesson of the larger meteorites that sometimes reach the earth; you can increase the thickness of your missile's skin (and hence the bulk and weight) and provide a heat sink. This is the so-called brute force or boilerplate approach; it obviously takes longer for a thick metal skin to melt than a thin one. But the brute-force approach has its disadvantages; it increases the weight of the missile and thus greatly increases the problem of the propulsion engineer.

Today, there is no clear-cut answer in sight to the heat problem—though one will be found. But again, as in the guidance problem, the power of the weapon that the ICBM will carry—the thermonuclear explosive—reduces somewhat the importance of the re-entry factor. You don't have to design a missile that will remain intact all the way to earth. It can miss vertically as well as horizontally and still do tremendous damage.

Here, then, is what some military men have called "the ultimate weapon," "the absolute weapon"—"the weapon that will rule the earth." It will tower perhaps 100 to 135 feet above its launching pad. Its gross take-off weight—with fuel—may be between 100 and 120 tons. It will lift, slowly at first, virtually straight into the air, burning thousands of pounds of fuel in 60 seconds. It will slowly tilt toward its great-circle course. Probably under 100,000 feet its first stage will break away; the second stage will ignite and the smaller rocket will continue its climb toward the stars. At 300 miles—above the earth's thin envelope of air—the second stage will be detached and the great warhead, perhaps 30 feet long, 4 feet in diameter, will streak on alone toward outer space under the tremendous momentum given it. It will reach its apogee between 600 and 800 miles above the earth and will then start its elliptical fall—perhaps tail first (for there is no bite of thin air to straighten it out). It may tumble, particularly as it gathers speed and reaches the upper atmosphere; it should nose down under the resistance of thicker air—but erratic gyrations are possible. Finally, glowing white and slowed down to Mach 2 or 3, it will burst like a violent meteor above some unsuspecting metropolis of man.

The ICBM will be an awesome weapon—with frightening capabilities. It is well named Atlas; truly it carries man and his future on its shoulders.

Eisenhower Administration Risks National Security by Withholding Information on Russian Military Strength

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 29, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to present this editorial from the current issue of Collier's magazine for the attention of my colleagues. This editorial calls attention to the failure of the administration to keep the American public informed on an issue vital to the survival of this Nation.

The editorial from Collier's follows:

THERE CAN BE TOO MUCH SECRECY

While we and the Soviet leaders have moved from one postwar conference to another, each of us has been building up his supply of weapons and perfecting new ones, in case of war. On the basis of recent assertions in Washington by responsible political leaders, and on the evidence adduced by Hanson W. Baldwin in this issue of Collier's, it has become at last abundantly clear that we and the Soviets are involved in a critical contest to develop the first intercontinental ballistic missile, otherwise known as the ICBM. This is not a guided missile in the sense that its automatic guidance apparatus carries it through its flight until the moment it finds and strikes its target. Although some form of terminal controls ultimately may be included in the weapon, although it is subject to guidance and correction during its first several hundred miles of flight, it is for most of the great arc of its trajectory very like a bullet. While, as pointed out by Mr. Baldwin, severe engineering problems still exist, the ICBM ultimately will be able to take off, achieve a velocity many times the speed of sound, and descend perhaps half an hour later on its target 5,000 miles away. There is no presently known method of stopping—or, as the military say, of interdicting—the missile once it has been launched.

Whether or not this is, indeed, the ultimate weapon or the absolute weapon, as it has sometimes been described, is a matter the experts may debate. Meanwhile, no one can argue the appalling capacities of a hydrogen bomb encased in a 5,000-mile-range missile which cannot be stopped. It is dangerous nonsense to quibble over the relative power of a weapon when, at a minimum, it can bring under the threat of total devastation any city on earth.

Nor may we, in relation to our military requirements, be greatly concerned with Soviet intentions. These, as has been abundantly illustrated, are highly fluid as to tactics, rigid only as to ultimate aims. To understand Soviet political aims and the various techniques used in pursuing them is the primary concern of our State Department. It is the task of the Department of Defense to make certain that regardless of Soviet intentions our Defense Establishment is at all times equal to or better than Soviet armed strength. That is its mission in peacetime no less than in wartime.

Yet there is increasing evidence that in the critical field of the ICBM the Soviets may well be ahead. As Mr. Baldwin points out, no one (including, fortunately, the Russians) can be entirely certain that this is so. But other statements have not been reassuring. Senator SYMINGTON has said flatly that the Soviets are well ahead in the race. Senator JACKSON of the Joint Committee on Atomic Energy also has indicated this in his speech in which he voiced the possibility that the Soviets soon may fire a 1,500-mile missile, with all that this threat implies against our present allies and our bases in Europe, Africa, and Asia. Many a leader in defense, in science, in politics has expressed the same opinion—that the Soviets are ahead of us.

Assuming that this is true, we should like to raise and examine the question—why? In a nation which has achieved one technological miracle after another, which rightly prides itself upon its enormous gifts of scientific brains and technological know-how, why is that we should fall behind a nation which we have all too often, out of smugness or vanity or plain bad judgment, underestimated?

Is it because the Soviets have concentrated their main effort on producing the

weapon with the clearest decisive advantages while we have scattered our effort over a variety of weapons, all excellent but none with the essential capability required?

Is it because, through dilatoriness or indecision or mistaken preoccupation with cost, we have proceeded on the ICBM program on a "business as usual" basis, keeping the essential plants on a single-shift basis when nothing less than a round-the-clock program will suffice?

The facts are, at least, that the plants have not been working at or anywhere near capacity; that only now, when the race has been in progress for nearly 3 years, has anything resembling a crash program been set in motion. And the apparent fact is that, as a result, we have let the Soviets get off to a head start in a matter which is of life-and-death importance to all of us.

Another, highly relevant, fact is that the vast majority of Americans have been going about their daily lives completely unaware not only of the fact that we are trailing in the race, but even of the significance of the race itself. In plain logic, such a situation is intolerable in a democracy such as ours.

This is not to quarrel with the basic requirement of maintaining essential security on many aspects of our national defense. It is obvious that a vast amount of technical data on individual defense projects, and information related to their progress, must be protected by secrecy. We clearly cannot afford to leak to the Russians data that enable them to widen their lead in the race for the ICBM—this is accepted by all.

But neither is it possible—and the ICBM may provide the grimmest example of this—for this democracy to exist in circumstances where the people are sealed off from all inkling of the great, strategic considerations which govern their very lives. This is a cynical denial of both the commonsense of the American people and the validity of the principle of self-government. More than that, it is harshly impractical, and self-defeating.

It is impractical, for one reason, because regardless of all else the people are invested with the power to govern, and they will govern, for better or worse, depending precisely upon the quality of information upon which their decisions are based. Every penny of money spent by the military on any project is provided by the House of Representatives, which alone has the power to initiate appropriation measures, and which, to a man, must return to the voters every 2 years for license to stay in office.

Ultimately any program such as that of the ICBM is inevitably based on public support, for it is only the public which can provide, out of pocket or through its existing institutions, the money, education and training, and scientific research programs to do the job.

The security of the United States is the primary, but not exclusive, concern of our elected representatives and our appointed military leaders. The great outlines of our defense policies and a broad knowledge of our relative defense posture should be known not merely by a small group of leaders, but by all citizens. In a democracy, in a free society based on the wisdom and judgment of all its members, the final great decisions must be made by the Nation as a whole.

But those final decisions can be made only when people have sufficient information to exercise thoughtful and careful judgment. The risk is great, but less great than when decisions are made in an absence of public knowledge, when the public has been deprived of access to information which will enable it to make competent decisions on the gravest matters of life and death and the survival of all we believe in.

It is not enough to know after the fact. It is necessary that the public be made aware of the great alternatives confronting it. Only thus do we, as a free people, retain ultimate custody of our lives and our freedom. Certainly neither history nor any possible future casualties will forgive those in power who feared to put into the hands of Americans the knowledge they needed to help prepare for their survival, but instead told them too little and too late.

The American Legion Story

EXTENSION OF REMARKS
OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 29, 1956

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Department Commander John Andrew May, of the department of South Carolina, American Legion, at Greensboro, N. C., on January 14, 1956.

Mr. President, it so happens that the department commander of the department of South Carolina was for 2 years my military aide when I was Governor of South Carolina in 1943 and 1944. On my recommendation he was later sent to Germany by the President as an attorney in the Nuremberg war crimes trial. Commander May is an outstanding South Carolinian who has served well his country in both peace and war. As commander of the South Carolina American Legion he has rendered outstanding service. I think his address which I send to the desk tells well the story of the American Legion and the great work it is doing in preserving Americanism.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE AMERICAN LEGION STORY

My first experience with the American Legion was on July 4, 1932, when the Department of South Carolina held their annual convention in my hometown of Aiken. I was not a member of the Legion, because I was not eligible, but I did attend the social affairs of that convention, and I remember very well what a good time those Legionnaires had. I saw them having fun at the dance, enjoying the beauty contest, and the parade, and that was all I knew of the the American Legion.

I believe that there are those today who have not had the opportunity to know the Legion and who still look upon it as I did back in 1932—as an organization of good fellows having a big time.

Since that time I have had the opportunity to work in the ranks of the American Legion, and now I know firsthand that there is much more to it than a bunch of good fellows having a big time.

I know now that the American Legion has become the most successful of all veterans organizations, because it has combined effectively high purpose with resolute action, and that its justification for existence is measured by what it stands for and what it does.

I know now that it is built around a great ideal and that ideal is the preservation of the free institutions of America. In its Preamble to the Constitution, that has often been called one of the great classics of the English language, we find an expression of the practical idealism of the American Legion. Sparkling with the purest gems of patriotic thought, the preamble is part of the oath of membership which every Legionnaire assumes—

"For God and country, we associate ourselves together for the following purposes:

"To uphold and defend the Constitution of the United States of America;

"To maintain law and order;

"To foster and perpetuate a 100 percent Americanism;

"To preserve the memories and incidents of our association in the great wars;

"To inculcate a sense of individual obligation to the community, State, and Nation;

"To combat the autocracy of both the classes and the masses;

"To make right the master of might;

"To promote peace and good will on earth;

"To safeguard and transmit to posterity the principles of justice, freedom, and democracy;

"To consecrate and sanctify our comradeship by our devotion to mutual helpfulness."

The American Legion has four basic major programs. They are: Americanism, child welfare, rehabilitation, national security.

The Americanism program can be broken down into four main groups of activities. They are—

First, the protective activities. This is a program of militant and aggressive opposition to all subversive and un-American influence and activities. This is the fighting phase of our Americanism program. In this phase we man the ramparts. In this field we attack.

The second group is the educational activities. This is a program to educate all in America—young and old—to appreciate fully the blessings of our free American way of life. In this field we teach.

Our third group is the youth training activities. This is a program to inculcate American ideals and principles into the youth of America as the basis for future good citizenship. We make use of activities popular with youth to accomplish this objective. In this field we build.

The fourth group is a community service activity. This is a program to make every community in America a better neighborhood, as a steppingstone toward making all the world a good neighborhood. In this field we serve.

There you have the four cornerstones of the Americanism program of the American Legion.

Attack enemies of our freedoms.

Teach appreciation of our blessings.

Build solidly for America's future.

Serve our fellow men in Christian spirit.

I did not know, in 1932, of the Legion's fight against communism. I know now that since its organization in 1919 the American Legion has been the No. 1 enemy of communism and that the American Legion was responsible for the creation of the House Committee on Un-American Activities.

I did not know in 1932 of the community service program. I know now that 17,400 posts last year engaged in some form of community service, and that thousands of cities have better civic facilities because of the activities of the Legion.

I did not know in 1932 of the school medal awards, awarded annually to deserving students throughout the land. I know now that last year over 16,500 medals were awarded to outstanding pupils selected by their teachers, who best exemplify good citizens.

I did not know of the Boy Scout work, but now I know that last year over 4,000 troops were sponsored by American Legion posts, and that thousands and thousands of Legionnaires served as Scout masters.

I did not know about junior baseball, but now I know that it is the largest organized amateur athletic program in the world for teen-agers—that last year over 17,000 teams

and almost a million boys participated in this great American sport.

I did not dream of such a thing as Boys' State and Boys' Nation. But now I know that this is one of the most effective youth training activities. Two hundred and fifty thousand boys have participated as Boys' Staters, where they learn by doing; and Boys' Nation—two from each State—attend the annual Boys' Nation in Washington; that they hold mock national conventions, elect a boy president, and hold a senate session; visit all historical and Federal points of interest in Washington, and are personally received by the President at the White House. For the past 2 years I have been counsellor and instructor at Boys' Nation. In this dramatic manner the American Legion brings to these boy leaders the never-to-be-forgotten insight into the functions of our Government, in order that they may make it better when they become active citizens.

I did not know of the American Legion oratorical contests based on a study of the American Constitution and Bill of Rights. Last year over 400,000 high-school students participated, and this year the national finals have been awarded to South Carolina, and will be held on April 16 in Columbia.

I had no idea in 1932 of the legion's great rehabilitation program. A program to make disabled veterans fit again to earn their livelihood. The American Legion has no equal in its service to the disabled veteran, war widows, orphans, and dependent parents, and all ex-service men and their families. We have a Veterans' Administration today because the American Legion convinced our Goverament that such an agency was necessary to administer veterans' benefits.

Of course, none of us knew about the GI bill of rights, but it is the American Legion's greatest single legislative achievement. Approximately 7½ million World War II veterans have had some form of educational training under the GI bill, and 3½ million have attended college, 1½ million received on-the-job training, and one-half million received farm training.

That under this bill almost 4 million veterans purchased homes; 221,000 received business loans; 68,000 secured loanas to buy farms; and that since this bill went into effect almost 11 years ago, it has produced 744,000 scientists, 700,000 mechanics, 750,000 modern farmers, 238,000 teachers, 145,000 engineers, 63,00 doctors, and 100,000 lawyers.

I had no conception whatever of the wonderful child-welfare program, but now I know that the American Legion is the leader in this great field of unselfish service and that together with the auxiliary and the 40 & 8 last year $10 million was provided for emergency financial help for the needy children of America. Most of this money went for food, clothing, and medical care.

I did not know in 1932 that those fellows who were having such a big time at the dance were also a religious-minded group, because now I know something of the great back to God movement that is sponsored by the Legion. The very first words of our Preamble are "For God and country we associate ourselves together." I know now that basic spiritual principles have always been the foundation of the American Legion. In 1950 the American Legion launched the nation-wide divine guidance appeal movement, and in 1952 we redesignated it as the "back to God movement." It has a three-fold program; first, to encourage regular attendance at churches; second, family prayer and devotion; and third, religious training of children. The American Legion believes that the church and home are our greatest character-building institutions and the American Legion is leading a nation-wide effort to bring the church and home into close partnership.

Let me mention some of the worthwhile things that I did not know about:

Mental health: Convinced that something should be done in this field, the American Legion contributed $25,000 to start this movement. This was the first major contribution to the newly established National Association for Mental Health, and 8 years ago the American Legion and Auxiliary donated $50,000 to help launch the first program of the American Heart Association.

Foreign relations: Foreseeing the approach of World War II, long before the public became conscious of the impending global conflict, the American Legion was the first to recognize the world-wide march of aggression. We were the first to demand that Hitler be stopped; that appeasements be condemned; to protest shipments of scrap metal to Japan; to call for an embargo on war materials to aggressor nations; to advocate the repeal of the Neutrality Act; and to demand the fortification of Guam and the Philippines. The American Legion urged an effective association of free nations long before the U. N. was a reality.

National security: From its birth in Paris in 1919, the American Legion has been the foremost champion of national security. Legionnaires, being war veterans, are keenly aware of America's need for a strong defense. We know, from experience, how important it is to go into combat with good and sufficient equipment. Between World War I and World II, the American Legion almost alone kept the torch burning for peace through strength. We were called militaristic by the pacifists, and subversive elements, but we point with pride that for 35 years we have championed adequate national defense.

The march of events has always justified the rightness of the American Legion, and our position on preparedness. In that connection, the American Legion favors universal military training. The framework of the American Legion's entire national security program has always been universal military training for the Nation's young men. In this atomic age when the payoff is on military "know how," the American Legion regards such training as security insurance for the Nation and survival training for its youth.

Civil defense program: Nine months before Pearl Harbor, the American Legion sent its own mission to England to study the functions of civil defense in modern warfare. The findings of this mission became the groundwork of the first civil defense program in America. The American Legion conducted 56 air raid warden schools in 31 States. We graduated 8,000 instructors, who, in turn, trained 225,000 wardens, and the American Legion paid for all these expenses. Since World War II, we see the need for continuing this program, and we vigorously supported the passage of Public Law 920 providing for the appointment of an administrator for civil defense.

Forty and Eight: Within the American Legion is a fun and honor society known as the 40 & 8. The official name is La Societe des 40 Hommes et 8 Chevaux. Translated it means 40 men and 8 horses. This name comes from the foreign boxcars which hauled American troops in the World Wars. American soldiers got a big laugh out of these cars, so when the Legion needed to laugh at their troubles after World War I, they thought of these cars and formed the Box Car Brotherhood. To become a member of the 40 & 8, a veteran must be a good Legionnaire. He must have served at least 1 year in the American Legion and performed some service of note for his post. Although primarily a funmaking organization, the 40 & 8 specializes in hard American Legion work. The voyageurs have been called the shock troops of the American Legion. The 40 & 8 actively supports the child welfare program and each voyageur contributed 50 cents annually to the child welfare fund.

The American Legion Auxiliary: Working in support of the American Legion in all its activities, is its fine auxiliary. The largest women's patriotic organization in the world. It is composed of the wives, mothers, sisters, and daughters of Legionnaires, and those of deceased veterans, and also of women who, themselves, served in the Armed Forces. Its membership is almost a million. The sole purpose of the auxiliary is to aid in the accomplishment of American Legion objectives. The auxiliary's work is especially effective with the Legion's work for disabled veterans. Trained volunteers from the auxiliary are on duty in veterans' hospitals throughout the country. Their cooperation in child welfare work is also highly effective. In supporting the other training programs, they sponsor girls' state and girls' nation, similar to the Legion's boys' state and boys' nation. The help us in many ways and they make our work much more pleasant and much more successful.

In conclusion, let me say that I have now discovered that the American Legion is the largest veterans' organization in the world history. It is the greatest patriotic society ever formed. Its name today is the greatest name in genuine Americanism, national security, and community service.

The veteran who joins the Legion no longer faces the world alone. He marches side by side with millions of his comrades, all working together for a common objective—keeping America always American.

Why People Go Communist

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Guardpost for Freedom, published by the Veterans of Foreign Wars:

WHY PEOPLE GO COMMUNIST—MOTIVES WHICH INFLUENCE PARTY MEMBERS AND THEIR SYMPATHIZERS

Communism can be fought effectively only if we understand the true nature of the Communist Party, just what a Communist is, and the motives that impel people to become Communists. The "Handbook For Americans" recently released by the Senate Internal Security Subcommittee is an excellent exposition of the nature of the Communist Party, what it is and how it works. The purpose of this study is to treat briefly the impulses that make people go Communist.

Before trying to analyze these motives, we must know exactly what a Communist is. Many people believe that only those who hold membership cards in the Communist Party are Communists. Others believe that anyone who is "very radical" is a Communist. Both of these views are wrong.

Radicals—people who disagree violently with generally acepted political, social, moral and economic ideas—existed long before communism came into being. They will exist long after communism is a thing of the past. Left radicalism may lead to temporary affiliation with the Communist movement. But a true radical is so much an independent thinker, a nonconformist, that

he will never remain a Communist. Communism demands complete conformity in thinking and thorough subjection of the individual to the will of the party. A real radical, by his very nature, cannot and will not accept communism.

The Communist Party, as a protective device, has not issued cards or books to any of its members since 1948. And even during and prior to 1948, when the great majority of Communists carried party membership cards, many members did not have them. These people were thoroughly Communist. They believed in the principles of Marxism—Leninism and accepted the dictates of the Communist Party on all matters. Because of the sensitivity of the positions they held, however, the party decided that it must never risk their exposure by issuing membership cards to them, even under fictitious names.

As a number of former high-ranking Communist have testified, a Communist is anyone who accepts the discipline of the Communist Party. He may or may not be radical. He may or may not have had a Party membership card in the past.

SYMPATHIZERS

In addition to party members, there are many kinds of "Communist sympathizers." A Communist sympathizer is a person who approves and, in many cases, carries out part of the program of the Communist Party. He may endorse just a small segment of the party program, or he may go all out for it, only stopping short of actual membership. The latter type of sympathizer is also known as a "fellow traveler."

COMMUNIST ORGANIZATIONS

There are different kinds or "layers" of Communist organization with which the average American may come in contact. They fall into three main groups: the Party itself, Communist-front organizations, and Communist-infiltrated groups.

No less an authority than Stalin described the relationship of the Party to its front organizations as that of the sun to the planets. Just as the sun radiates energy to the planets, the Communist Party supplies the directive force to its front or "mass" organizations. Naturally, the farther away any organization is from the party, the less force or control the party can exercise over it. For this reason, some front organizations are less "red" than others.

When Communists cannot take over an organization, they try to infiltrate it in order to exercise some control over its policies. Strictly speaking, an infiltrated organization is not a front. From the viewpoint of Communist influence, however, it becomes very important. Communists try to inject more and more Communist energy into its activities until it finally becomes a front in the true sense of the word.

BACK TO MOTIVATIONS

Keeping in mind these definitions of the various kinds of Communist personalities and organizations, we may now try to answer the original questions: Just why do people go Communist? Our answers will apply to both the party member and the sympathizer, since the motives are similar in each case.

A party member may have more reasons for accepting Moscow's line than the sympathizer and will, in all probability, feel deeper conviction about the necessity of doing so. But the reasons which drive sympathizers into front organizations, while usually weaker in number and degree, are fundamentally the same in kind as those that drive others into the party itself.

TWO MAIN REASONS

All motivations that impel people to become Communists can be classified under two main headings:

I. Misguided sympathy for oneself or others (honest reasons).

II. Excessive personal ambition (a dishonest reason).

Every other reason can be fitted under these two headings. People follow the party line either because they believe they can obtain justice for themselves or others by doing so, or because they are seeking power.

I. HONEST REASONS

Many people who get mixed up in the Communist movement do so for more or less honest reasons. Please note that qualification: "more or less." No motive for following the party line can be regarded as completely "honest."

Troubled people often take a short-range view of their problems. They do not think their action through to their logical consequences. This lack of prudence common to troubled people is especially prevalent among the type of people who fall for the party line.

It should be kept in mind that while people may first join the Communist movement for more or less honest reasons, they inevitably become corrupt if they remain in it for any length of time. The indifference of the American Communist Party to any genuine redress of wrongs is such that, after a while, even the most excitable person must catch on to the deception. He or she will then either get out of the movement or remain in it for reasons which cannot be called honest.

1. Desire to correct an injustice done to oneself

It is not dishonest to seek after justice and equal treatment under law. People who suffer injustice contrary to the law of the Nation may, in their distress, imprudently turn their attention to a group which promises speedy relief, without inquiring into the organization's ulterior purposes.

2. Desire to redress wrongs done to others

Many charitable people want to help others less fortunate than themselves. In order to accommodate these eager souls, the Communist Party has built a system of front organizations espousing numerous apparently worthy causes.

It is easy to laugh off these fronts as obvious hoaxes that ensnare only emotional do-gooders. But the fact is that many of the causes which the party appears to support through these organizations are worthy of the efforts of honest people. The party manipulates its fronts so cleverly that, for a while at least, even well-educated people may not detect their real objectives.

3. Confused protest

Uneducated or perplexed people, taking a short-range view, may support the Communist movement out of a desire to protect against the seeming failure or inactivity of established, respectable organizations.

The Communist strategy of exploiting the protest vote of confused workers and peasants paid high dividends in Europe after the war. Because revived prewar methods failed to restore immediate prosperity in some countries, Communist short-range appeals to worker frustration received a ready ear. The Communists, by claiming to offer a quick and easy solution to all problems, gave the people an outlet through which they could express their dissatisfaction with what appeared to be the failure of legitimate political parties.

4. Being useful in life

A legitimate goal of every normal person is to be useful in life. Unfortunately, less talented people are too often brushed aside in the fierce competition of human society. Success should have its rewards—but the high achievements of a few should not be idolized to the neglect of the many who lack the opportunities and talents which are essential to success.

Through its front organizations, the Communist Party has shown great skill in utilizing the neglected talents of "little people." Such lowly folk are given assignments proportionate to their ability. The task itself may be slight, but the Communist sympathizer is made to feel that he is important, that he is contributing to the future welfare of humanity. From being a nobody in the established systems of modern life, the Communist sympathizer quickly becomes a somebody in the fight for socialism and progress. And if he eventually joins the party itself, he receives an elaborate education in techniques of self-expression and revolutionary leadership.

5. Desire for social participation

People are not naturally hermits. They have an inborn desire to belong to human groups, to associate with other human beings. We must carefully observe that this desire for association with other people is not necessarily the same as the ambition to be useful in life. What is referred to under this number is not the desire to be of service, but merely to belong.

By setting up a network of fronts that embraces many different fields—foreign relations, civil liberties, labor, politics, veterans affairs, music, the theater, photography, etc.—the Communist Party has been able to capitalize on the natural desire of people with varying interests to belong, to get together with others, especially those having interests similar to their own.

6. Opposition to Hitler

One of the most effective tricks the Communists ever pulled was to make it appear that they were the most energetic opponents of Hitler. During the late thirties, some people who were rightfully distraught at the Nazi persecutions came to think of activity in certain Communist fronts as the most effective means of fighting Hitler, nazism, and fascism.

II. MOTIVES BASED ON EXCESSIVE SELF-INTEREST

Not even a short-range point of view can make the following list of motives honest. Their inspiration and driving force is inordinate self-interest. God has endowed men with certain talents and capacities which they may—and should—develop. Such self-improvement, however, must be effected within the framework of honest society. A person has a right to get ahead in life, but he must respect the rights of others in doing so.

Many people who associate themselves with the Communist movement do so not in order to help humanity, but to further their own interests at the expense, and even through the extinction, of others.

1. Lust for power

Some people have an intense passion to dominate. This aggressive trait manifests itself in many different ways, one of which is attachment to the Communist movement. The party cultivates in its members the idea that they, and they alone, have a preferred right to reshape the destiny of the human race.

Anyone who has ever had personal contact with well-indoctrinated Communists cannot but be amazed at their insolence and contempt for other human systems which have passed the test of time. Communists know better than anyone else. They know that Communist ideology can remake human nature, that Soviet biologists can change the laws of animal heredity. This sense of unlimited superiority intoxicates some people who have contracted the fever for power over their fellow men.

In all probability, lust for power constitutes the strongest of all motives with the top command of the Communist movement. These party leaders work extremely hard. They also risk much, even their lives. But in exchange, they enjoy the delirium of "re-

creating" lesser people and, sometimes, of annihilating millions of them. What greater satisfaction can the tyrant who lusts for power over his fellow man hope for?

2. Frustrated capitalism

This is the principal motive of the superior-feeling Johnny-come-latelys who want the shortest and surest way to the top. These ambitious people may convince themselves that their intentions are altruistic, that they will help humanity once they got the right position. Actually, however, self-interest, conceit, and impatience are their real motives for joining the Communist movement.

Many students who prattle the Marxist line during their college days find it distasteful after they have found a good job. Vested interests make people cautious. It is better to have comfortable security within the capitalist system than to live in hopes of someday being a commissar in a Soviet "paradise."

Nevertheless, because not every Marxist-minded college student will be able to find a "bourgeois" position that satisfies him, the party can count on a steady flow of recruits from the ivy-covered halls of our universities. And since ambition is by no means limited to college students, some other Johnny-come-latelys will continue to take their chances with the Communist Party.

3. Cold-blooded opportunism

This motive has much in common with the immediately preceding one. But while the frustrated capitalist may deceive himself as to why he joined the Communist movement, the cold-blooded opportunist suffers from no such delusions. He knows very well why he is following the party line.

Cold-blooded opportunism has motivated people in many fields to use any device to further their avarice. It is no wonder that we find many instances of clever Communist manipulation of self-seeking individuals in the fields of entertainment, labor and the press—anywhere, in fact, where such individuals are in a good position to promote party propaganda.

4. Ambition to be esteemed outside one's own field

People who are successful in one field or profession often dream of being hits in other endeavors for which they lack qualifications. The Communist Party has been particularly successful in exploiting variations of "social climbing" and love for acclaim in undertakings outside the areas of prominent personalities' real competence. A successful astronomer or physicist, for instance, is put on a program about China with a Broadway or Hollywood actress. The actress gets the confused idea that she has become learned, the scientist thinks he is glamorous—and both believe they are "China experts." Everybody is happy, especially the Communists who collect the folding money.

5. Desire to have everybody chopped down to size

This is a negative, selfish motive of lazy people who want to deprive others of fair recognition and legitimate opportunities for advancement. Such people may lack the talents, enterprise, and courage which are necessary to get ahead. At the same time they hate to see others succeed. Love of deadening equality is much more popular with them than love of liberty and fraternity.

Fortunately this motive is far less common in the United States than it is in certain European countries where the culture is old and tired. After V-E day many Frenchmen and Italians joined the Communist movement out of cynicism rather than out of any expectation of seeing their country rescued from the exhaustion of the war. Voluntarily, they chose to be Communists without hope.

III. MOTIVES RELATED TO PERSONAL DISINTEGRATION

Some of the following motives have already been discussed in the two preceding sections. Here, however, a new approach to them is taken. They are considered as impulses which proceed from emotional instability, a psychological disorder.

1. Neurotic restlessness

To regard everybody who joins a Communist front as neurotic would be a serious mistake. Communist control over a front organization may be so cleverly concealed in the early months of its existence, that only its worthy motives show during that period. Moreover, enthusiasm for honest causes cannot be dismissed simply as an indication of neurosis.

On the other hand, a person's emotional life is certain to become twisted if he remains closely associated with the Communist movement over a long period of time. Superficial contact with one or a few front organizations may do no or relatively little harm. But close affiliation with the Communist Party itself makes people progressively unfit for normal human relations.

Those who doubt that life in the Communist Party involves a self-imposed segregation from normal human life need only read a few of the personal accounts of those who have had the courage to break away from it: Louis Budenz' 2 books, This Is My Story and Men Without Faces; Fred Beal's Proletarian Journey—or a work composed by 6 well-known ex-Communists, The God That Failed.

These saner people who could not continue to bear the abnormality and inhumanity of Communist existence poignantly depict the problems of psychological adjustment which an ex-Communist must face. In doing so they have shown that party membership can often be an escape hatch into a kind of unreal world for the restlessly neurotic person who cannot adjust himself to life in normal society.

2. Rebellion against the existing order—the conspiratorial appeal

Adolescents believe their freedom is unjustly restricted by the older generation. They therefore resent authority and are rebellious. Because they are also insecure, they join in gangs to give themselves confidence and the courage to defy authority. The Communist Party is a rebellious gang defying established order. As such it has a certain natural attraction for young people, who will accept strict discipline as long as they believe they have something to do with its making and it is not "the old kind."

Related to this is the conspiratorial and secretive appeal of the party. Doing things secretly and making plans against the existing order satisfies youths' resentment against authority.

The rebellion and conspiracy appeal of the Communist Party may be considered as a more or less natural appeal for adolescents. But when operative, as they often are, in the cases of adults who join the party, they are definitely indications of emotional immaturity and maladjustment.

3. Showing off

Communist organizers put to good use the urge for exhibitionism common to some young people. These youngsters are directed to show off on a picket line or on a visit to government officials. Communist leaders pretend to favor legislation which they secretly hope to defeat; social security, housing reform, etc. By sending a delegation of neurotic exhibitionists to visit a Congressman or Assemblyman, they can satisfy the craving of youth for excitement and also kill good legislation while pretending to be in favor of it. There are always some adults in such delegations, older Communists who have never grown up and crave the exhibitionist outlet this type of party activity gives them.

4. Desire for unihibited sex relations

This motive has been extensively employed as a come-on for certain types of people. A few years ago loyal party-line girls were directed to concentrate on the New York waterfront by providing entertainment and intellectual readjustment for the members of a maritime union.

In the early days of the party, sexual license was extremely common, especially in the case of the Young Communist League. This secondary end of party policies actually proved so interesting to certain uninhibited youth that the effectiveness of the YCL as a revolutionary organization was threatened. Nevertheless, since Moscow had encouraged sexual freedom, no American Communist would have dared to check it.

By the middle thirties the Soviet government had begun to revise its ideas about sexual morality. Somehow, free love and the 5-year plan had not mixed. Officially encouraged abortions had not provided sufficient heroes for the fight against fascist aggression. When the Soviet government went "puritan," the American Party had to follow suit—at least in theory.

5. Vague humanitarianism

This is an extremely cogent motive with many inveterate Communist fronters. One might call it the fundamental belief of the confused, actually psychopathic liberal who wants ever so much to do good but has only the faintest idea of how to go about it. Such warm-hearted but muddle-minded people pulsate with obscure vibrant sentiments that lack foundation in a rational philosophy of life.

As a result they become the natural prey of everalert, hard-boiled party organizers who herd them into a variety of "innocents clubs." In these heartwarming organizations the "softheaded liberals," as they are contemptuously referred to by party leaders, cannot refuse any humanitarian appeal. This type of person does the Communist Party the further service of befuddling and paralyzing many progressive movements.

6. Disillusion and pessimism as to the value of western civilization

This is the excuse often given by "lost liberals" for their uncritical acceptance of the Soviet myth. These people will search out every little defect in our own civilization with an X-ray eye, but will find nothing wrong with the Soviet way of life. They claim to be rational, but, like blinded moths, rush blissfully toward the bright light of Soviet concentration camps—while declaiming against some minor injustice in the United Staes of America. This is the nonthinking kind of pessimist who lacks the energy and ability to work out an adequate philosophy of life.

Other pessimistic and disillusioned people who have thought things through have also associated themselves with the Communist movement. Back in the depression days, many brilliant minds—such as those of Whittaker Chambers and Alger Hiss—could see no way out. They coolly and deliberately hitched their fortunes to what appeared to be a rising star, the red star of international communism. For a time this new course seemed to solve their problems.

"Realists" of this sort are not so much attached to the Soviet Union as to the desire not to make a failure of their lives. The effectiveness of Communist propaganda is shown by the fact that it has made such discontented people identify the goals of theoretical Marxism (their rational answer to life's problems) with those of the Soviet Union.

Hardheaded people do not like their objectives to remain abstract and vague. They want their goals expressed in concrete form.

This has helped Stalin's agents in their job of selling the Soviet Union as the concrete embodiment of theoretical Marxism. The fact that the real product was thousands of miles away and not, therefore, available for critical inspection has also helped a great deal in the marketing of this idea.

7. Desire for complete regimentation

Some people would much rather follow the leadership of others than be burdened with the problem of figuring things out for themselves. Party membership satisfies this desire. Communists carry submission to the utmost extremes.

What they ask of the party is total guidance, without which they know they will err dialectically and expose themselves to the horror of being purged. Not regimentation, but expulsion, is their greatest fear.

8. Personal reintegration through party activity

Without doubt, some unstable personalities achieve a measure of reintegration by absorption within the whirl of party and party-front activities. In the Communist movement the "whole of their lives" is made over and given a purpose. Louis Budenz in his book, "Men Without Faces," has vividly described the importance of this endless round of party functions for people who have hitherto been neglected or, at least, have failed to receive the attention they crave. There is one great catch to their newfound happiness: Never can they question the absolute will of their leader, even though it bring them personal annihilation. Their submission to this is a sign of still existent disintegration.

9. Identification with the powerful world force, Russia

A timid, weak man can act bravely and boldly when he thinks he has a strong protector. The might of the Soviet giant transforms the insecurity of many Communist sympathizers and infuses in them great vicarious power. For the party member, identification with Russia marks the summit of personal reintegration. What more is there to hope for in the universe than union, through the conspiracy, with one's glorious and mighty father in Russia?

IV. MOTIVES OCCASIONALLY EFFECTIVE AMONG WELL-TO-DO PEOPLE

To many people the most puzzling thing about the Communist movement is the fact that a minority of wealthy people have become involved in its meshes. While it may not seem illogical for a genuine proletarian to go Communist, the sight of a millionaire doing so is something to ponder.

1. Sense of guilt deriving from an unearned fortune

Sometimes rich people feel ashamed at having inherited a fortune which they realize they could not have earned. Communists have a wonderful talent for divining such delicate consciences. Very soon the guilt-stricken angel is promoting worthy causes under neatly concealed Communist direction.

2. Making a nuisance of oneself to attract attention

This is a variation of the tactic which the dumb boy adopts in order to get attention in school. If he cannot succeed at his studies, he may be able to annoy the teacher and thereby draw attention to himself. Every now and then a scion of a great business family realizes that he cannot make good at the profession of his father but that if he joins up with the enemies of capitalism, he can attract a lot of attention to himself. So he does just that.

3. Boredom, thrill-seeking

The jaded society woman may be looking for something different. So she tries a little proletarian slumming in a Communist front. Next year it may be yogi or yo-yo. Before she wearies of her penthouse communism she will have parted with a heap of folding money.

4. Desire to dominate others through the use of one's fortune

Occasionally, a person of great wealth will get the itch to influence public opinion with his ideas. For several years a male millionaire doubled as angel to an eastern newspaper popularly referred to as the uptown Daily Worker. When the wealthy man wearied of his progressive cause, an elderly female millionaire eagerly snatched at the opportunity to keep alive the fires of only slightly concealed communism.

V. MOTIVES RELATED TO RELIGION

1. Violent hatred of all God-directed religion

This is diabolical rebellion, the defiant cry, "I will not serve." One of Lenin's last acts was to order an intensified attack on religion. While party members may for a while retain vestiges of religious superstition, all top personnel must actively profess atheism.

2. Thrill of personal deification

In a vague, pantheistic way the Communist Party becomes the material substitute for God and each comrade, as part of the dialectically evolving force, somehow shares in its "divinity." Being a tiny segment of this all-absorbing monster provides an immensely flattering substitute for the old religion which required submission to a Creator outside oneself. When a comrade believes he is a part of the great force that imposes party discipline, he can endure that abnormal regimentation more patiently. If he is not near the top of the organization, however, he has to be a facile dreamer to suppose, after some years in the party, that his share in the world force amounts to anything.

3. Hunger to fill the void left by loss of the old faith

Attachment to communism is often a desperate effort to fill the emptiness left by the abandonment of God-directed religion. The lost liberal, wanting only to be "rational" and yet starving for something to believe in, ends up by making an act of faith in his daydreams—that is, in his own illusion of what the Soviet system ought to be. Any resemblance to reality is purely coincidental.

4. Paradise on earth

"God-directed religion promises pie in the sky, by-and-by," say the Communists. The materialist wants a big piece of cake with cream on top right now. And the comrade is sure that he will get it, along with strawberries and peaches, on Khrushchev's happy collective farms.

THE ENCYSTED MIND—AND SOUND ANTI-COMMUNISM

The person who fellow travels or remains a party member for any length of time, for whatever reasons, moves farther and farther away from normal human existence. Around himself he steadily erects a wall of Communist servitude. In the end he becomes completely encysted within the very dark world of a self-imposed segregation from healthy human society. Material success may come his way. But in order to live a normal life again, he must submit to a long and painful readjustment. The way of the ex-Communist is by no means easy.

This analysis of why people go Communist—a previously published study somewhat revised by the director of the VFW sovereignty campaign—is presented here as an aid to sound anti-Communist action.

The Senate Internal Security Subcommittee's Handbook for Americans states that all anti-Communist programs must have two objectives in view:

"(1) The first objective must be the reeducation of Communists through methods of persuasion and experience in order to reincorporate them into the ranks of sane and constructive citizens. It must be recognized that this is difficult since we are confronted in many cases with hard-bitten bigots. Nevertheless, it should be attempted, since it is far more desirable to have a sophisticated, well-informed, and loyal citizen who can contribute his knowledge and experience to the fight against communism than one who is dedicated to defiance of the American Government.

"(2) The second objective must be to invoke the full penalty of the law against recalcitrants both as a deterrent and as a means of reeducation of those not responsive to objective number one."

It is hoped that this attempt to explain the principal motives that impel people to embrace communism in one form or another will aid in the accomplishment of the first objective outlined by the committee. It is difficult to get anyone to break with communism when you have no idea of why that person went Communist in the first place. Cause and cure are closely interwoven.

This study is designed to be of assistance in uncovering the principal reasons why certain individuals have become Communists or fellow travelers and thus providing a clue to the best means of promoting their defection from communism and their reintegration into normal society—an undertaking certainly worthy of the efforts of all lovers of freedom and men of good will.

Hon. Chauncey W. Reed

SPEECH

OF

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 10, 1956

Mr. CHIPERFIELD. Mr. Speaker, it was with profound sorrow and the keenest sense of personal loss that I learned of the passing of our good friend and beloved colleague from Illinois, CHAUNCEY W. REED. As a Member of this body he lived up to its highest and best traditions in the performance of his duties; he had the mature wisdom of an understanding heart, a mind enriched with a knowledge of government and a full-rounded experience in legislative procedure. He guarded zealously the integrity and prerogatives of the Congress and the Committee on the Judiciary, which he served as chairman during the 83d Congress.

It was my good fortune to look to CHAUNCEY for guidance when I was first elected. I came to admire him and respect him as a fine, patriotic, conscientious public servant, and a friend of all who knew him. He was unassuming in his manner but stood firm as a rock for the principles which he believed were for the betterment of our country.

Everyone takes pride in a man who thinks straight, says what he thinks, and votes the way he talks. Such a man was CHAUNCEY REED. He worked and voted for what he believed was right. He had unbounded courage to publicly state his convictions and stood steadfast by those convictions.

I join with my colleagues in extending my sympathy to his family. We will miss his human qualities which endeared him to us all.

Inauguration Day Should Be a Legal Holiday

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. MULTER. Mr. Speaker, I wish to call to the attention of our colleagues the following statement which I submitted on February 24, 1956, to the House Committee on the Judiciary during its hearing on bills providing for a legal holiday on Inauguration Day:

Mr. Chairman and members of the committee, I appreciate the opportunity you have given me to present a statement in support of the resolution, House Joint Resolution 19, which I introduced on January 5, 1955, for the purpose of declaring a legal holiday on January 20, 1957, and on the day in every fourth year thereafter which is celebrated and known as inauguration day.

Permit me to say that I had the privilege to appear before your committee in behalf of a similar resolution on June 17, 1953. In that statement I stressed the importance of the event and the fact that, in practice, all over the country the national economic life, public and private, comes to a standstill.

We all recognize inauguration day as a significant event in the public and private life of our great country. On that day the attention of all persons is unremittingly fixed on the auspiciousness of the occasion. Through the media of radio and television our country and, indeed, the entire world, participate in the solemnity of the occasion and in the festivities of the day.

In this statement I wish to emphasize the unique moral and ideological importance connected with this vital quadrennial occurrence in our national life. Generally, holidays are directed to the memory of a past event, and in their commemoration the event becomes a symbolic example and a guiding pattern for our future life. We are grateful for the past and, implicitly, we promise to make our future life more and more worthy of those sacred ideals.

Inauguration day is the day which celebrates the most outstanding expression of the will of our people and elevates it as a symbol of the will of our Nation. On this day the Nation more than ever is one and united; on this day we look with new confidence, assurance, and faith toward the future. In the ensuing 4 years the political, economic, cultural, and moral life of our people will establish new landmarks.

Why do we allow free time for our people to vote if we do not permit them the opportunity to celebrate nationally the direct result of their voting. We look upon the right to vote as the blessing bestowed upon us by a true democratic way of life. If we esteem it as a transcendent privilege for the old and young, for all classes, races, and creeds, should we not afford our countrymen the opportunity to celebrate in their political choice—the final outcome and expression of their will.

On inauguration day we do not rejoice in a single man, in a certain name, in a particular political leader. On that day we reaffirm our faith in and our allegiance to a most sacred institution—we honor and extol the office of President as the cornerstone upon which our Constitution is preserved, protected, and defended.

The proposed legislation is not without precedent in the annals of our history. Permit me to call to the attention of the committee the act of March 2, 1889 (25 Stat. 980, 50th Cong., 2d sess.), which declared a national holiday on April 30, 1889, the centennial anniversary of the inauguration of our first President. It provided:

"That in order that the centennial anniversary of the inauguration of the first President of the United States, George Washington, may be duly commemorated, Tuesday, the 30th day of April, anno Domini 1889, is hereby declared to be a national holiday throughout the United States. And in further commemoration of this historic event, the two Houses of Congress shall assemble in the Hall of the House of Representatives on the second Wednesday of December, anno Domini 1889, when suitable ceremonies shall be had under the direction of a joint committee composed of 5 Senators and 5 Representatives, Members of the 51st Congress, who shall be appointed by the presiding officers of the respective Houses. And said joint committee shall have power to sit during the recess of Congress; and it shall be its duty to make arrangements for the celebration in the Hall of the House of Representatives on the second Wednesday of December next, and may invite to be present thereat such officers of the United States and of the respective States of the Union, and (through the Secretary of State) representatives of foreign governments. The committee shall invite the Chief Justice of the United States to deliver a suitable address on the occasion."

Various public groups have given their support to the purpose of this proposed legislation. It is common knowledge that most businesses come to a standstill that day.

In view of all the above factors, I do hope the proposed legislation will receive the favorable consideration of this committee in order that all our countrymen may participate to the fullest extent in the importance of Inauguration Day.

Nixon Would Subvert the Eisenhower Ticket

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. DINGELL. Mr. Speaker, in view of the President's announcement today, I feel that the article which I found in the Fresno (Calif.) Bee of February 22, 1956, is of most vital concern to the people of our country:

NIXON WOULD SUBVERT THE EISENHOWER TICKET

Every thinking American with the best interest of his country at heart must pause before these words of Walter Lippmann, the eminent New York columnist.

"This central thing is that Eisenhower unites the country and heals its divisions. This precisely is what NIXON does not do. Instead of being a national leader, he is a ruthless partisan. He is a politician who divides and embitters the people."

Coming from a man of sober and moderate expressions, this indictment is both devastating and completely perceptive.

Lippmann is saying the Republicans in good faith cannot run both Vice President RICHARD M. NIXON and President Dwight D. Eisenhower on the same ticket. To do so would be to build a moral contradiction into the ticket. To do so would be to sak the people to sign a contract for one set of principles in the full knowledge events might foist an entirely different set of principles upon them.

Such a contract would be dishonest. It would reveal the Republican Party to be a Janus-faced monstrosity. It would display it as devoid of all consistency of principle and as willing to peddle disunity and rancorous partisanship as it is to sell constructive unity.

It would be one thing for the party to bait its ticket with a man like NIXON to catch the more virulent party vote if it were reasonably certain the second would remain the second and the first the first. But is is quite a different thing when the tragedy of the President's illnes has made it less than certain that the ticket's bottom will not become its top.

Under such circumstances it is vital, if Eisenhower is to run again, that the second man on the ticket partake of the character of the first man. It is of course unthinkable that a man who has suffered a crippling blow to his health would run again. But if he should do so, the least to be expected of an honorable party is that it be able in the character of its ticket to assure the American people 4 years of the best qualities possessed by Eisenhower.

It would be an act of historical and unprecedented bad faith to ask the American people to vote for a ticket which contains within itself the exact reversal of its best principles and qualities.

Declining Farm Prices and Greater Foreign Imports

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a letter which I have received from Mr. John Zellerman, secretary of the United Farmers of America, Inc., Edwardsville, Ill.

Mr. Zellerman asks some very pertinent questions concerning our Nation's farm problem. He expresses greatest concern over low hog prices in the United States, while each year brings an increase in importations of hams, shoulders, and bacon.

In checking for the information requested by Mr. Zellerman, I personally was amazed to find that the Department of Agriculture records indicate imports from Canada, Denmark, Germany, the Netherlands, and Poland chiefly of canned hams in dollar value and by years as follows:

1947	$24,000
1948	252,000
1949	1,535,000
1950	18,462,000
1951	29,370,000
1952	46,976,000
1953	88,247,000
1954	95,752,000

It is evident that Mr. Zellerman and the membership of his farm organization have cause for concern. Mr. Zellerman's letter follows:

UNITED FARMERS OF ILLINOIS, INC.,
Edwardsville, Ill.

Hon. Congressman MELVIN PRICE.

DEAR SIR: I wish to take this opportunity of writing you on behalf of myself, my neighbors, and the membership of the United Farmers.

I don't know what you found out about the farm problem in your recent adjournment of Congress, but I have a few questions I wish you would answer for me so that we can report them to our membership.

Many of our members are hog producers, and my first question pertains to hog prices. Hogs are selling here for about $12 per hundred with many undesirable weights bringing less than $10.

Now under the present administration the Government is spending your and my money trying to keep the prices of hogs up. At the same time millions of pounds of pork are being imported and sold in our local stores.

Question: "Who is responsible for these conditions?"

I have been reading the papers looking for the major farm organizations to take a stand on the imports of farm products. To date I have not seen or heard one of them mentioning the fact that we are importing many farm products that we are told we have in surplus here.

Question: "Why are imports of farm products allowed when we are told we have them in surplus here? Who is responsible?"

If you do not have the answers to the above questions, I hope you can get them and forward them to me. The loss of farm income is beginning to have its effect on all types of business in the rural communities.

To bring this important matter before all the Congressmen, Senators, and the public I would like to request that you have this letter inserted in the CONGRESSIONAL RECORD.

Best wishes for the New Year.

JOHN ZELLERMAN,
Secretary, United Farmers of America.

Proposed Soviet-American Treaty of Friendship—Some Reasons for Its Rejection

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. DINGELL. Mr. Speaker, recently the press throughout the Nation gave headlines to the report that President Eisenhower had received a friendly letter from Soviet Premier Nikolai A. Bulganin. It was eventually disclosed that this letter was in fact a Soviet proposal for a treaty of friendship and cooperation with the United States Government. In a letter to Premier Bulganin on January 28, President Eisenhower politely but firmly rejected the proposed pact.

Could the President have acted otherwise?

The answer is "No."

In the Bulganin proposal the Soviet Government asked the United States to conclude a pact "on the basis of equal rights, mutual respect for State sovereignty, and noninterference in internal affairs." It also declared that all disputes arising between the two countries were to be settled by peaceful means. Both contracting parties were also pledged to "contribute to the development and strengthening of economic, cultural, and scientific cooperation between the two States, on the basis of the principle of mutual benefit and equal rights."

On the face of it the Soviet proposal seems harmless. Indeed, to some it may be desirable; for the Bulganin letter and the proposed treaty read like a perfectly sensible appeal by the head of one government to the head of another to cooperate in easing international tension and to promote world peace.

After a careful and thoughtful analysis of the instruments, however, it is clear that the entire proceeding is nothing more than a propaganda trick, and if the United States Government were foolhardy enough to conclude such an agreement, it would mean a diplomatic victory of the first order for the U. S. S. R.; it would destroy the unity of the Western coalition; it would undermine the strength and spirit of the free world; it would in the long run lay open Western Europe and other areas of the world to Soviet aggression and expansion. In a word, the conclusion of such a pact would gravely endanger the life of our Nation.

The Soviet Government cannot be trusted.

Here is the first and foremost reason for rejecting the proposed pact.

Our relations with the Soviet Government have been a source of continuous disillusionment. In nearly four decades of our experience with the Russian Communist regime that regime has done little to inspire the type of confidence and trust that should exist among nations who want peace. No sooner was the Bolshevik regime established in Moscow than the Third International, the so-called Comintern, was founded; and at once the C. P. U. S. A., the American counterpart of the Russian Communist Party, began its work of subversion and intrigue to destroy the American Republic. When the United States finally recognized the Soviet Government in 1933, one of the key agreements in the negotiations was the Soviet pledge that it would not carry on subversive activities in this country. The agreements bearing on recognition were excellent agreements; they provided for every safeguard, except the one that rests with the intent of the contracting parties to fulfill their obligations in good faith. This, of course, the Soviets did not do; and even to this very day its agents, the members of the C. P. U. S. A., ever faithful to the Socialist homeland, the U. S. S. R., continue their destructive work in the name of "Americans."

The necessities of war brought the United States and the Soviet Union together as allies in 1941. Important agreements were concluded by the Allies at Yalta and Potsdam which, if carried out in a spirit of truth and justice, would have meant a real peace for the world today and genuine democracy in Eastern Europe. Our postwar experience with the Soviet Union has, however, demonstrated to us how little faith one can put in Soviet agreements. The ruthless sovietization of Eastern Europe was carried through in outright violation of engagements negotiated between the United States and the Soviet Union. Civil war in Greece was a graphic demonstration of Communist calumny and Soviet interference in the internal affairs of another state. The blockade of Berlin was another attempt to undermine the word and the spirit of allied agreements bearing on the occupation of Germany. And finally the Moscow-inspired Korean war—a hard and bitter experience for all of us—demonstrated beyond a shadow of a doubt how faithless the Communists really are.

Nor has Soviet conduct with other nations inspired any greater confidence and trust. In 1939, when Hitler was about to launch World War II, the Soviet Government concluded a pact with the Nazi government which divided Poland and other areas of Eastern Europe into spheres of conquest. At that time Soviet Russia had in force a pact of friendship and nonaggression with Poland, but it did not stop it from violating this pact by wantonly invading eastern Poland and annexing those territories to the U. S. S. R.

The Baltic States suffered the same fate. Pacts of friendship and nonaggression had been concluded between the Soviet Union and the Baltic States. A network of unilateral and multilateral treaties bound the Soviet Union to recognize the sovereignty, independence, and territorial integrity of those states and to pledge its word not to intervene in their internal affairs. But all these treaties were no barrier to Soviet conquest in 1940 and reconquest in 1944.

Nor has the British or French experience with the Soviet Union been any more wholesome. Pacts of nonaggression were concluded during the war between the Moscow government and the British and French. Those pacts, however, did not prevent the launching of a Soviet-inspired Communist campaign to destroy French sovereignty over Indochina and to undermine British constitutional authority in Malaya. Only recently the Soviet Government tore up these pacts when West Germany joined the western coalition. This is itself a striking demonstration of the respect with which the Soviet Union holds formal international engagements.

Soviet Russia need not have a pact of friendship and nonaggression with the United States or any other member state of the United Nations. This is the second reason for rejecting the Bulganin proposal.

All major points proposed by the Soviet Premier are in fact substantive articles in the Charter of the United Nations. Soviet Russia and the United States agreed, when they signed the charter, "to develop friendly relations, based on respect for the principle of equal rights and self-determination of peoples." By this solemn treaty they agreed to settle their international disputes by peaceful means. And they agreed to work for "solutions of international economic, social, health and related problems" and strengthen "international cultural and educational cooperation."

Both the United States and the Soviet Union are pledged by the United Nations Charter to advance world peace and in-

ternational cooperation. What end can be served, therefore, by heaping upon this fundamental agreement pledge after pledge, reiterating the very same principles? Is not this initial pledge of peaceful intent and nonaggression sufficient if Soviet Russia did not have other motives? There are, in fact, many areas of the world where international tension could be eased and peace assured if Soviet Russia indicated a willingness to do so. We need no pacts of friendship to do that. At the Geneva Foreign Ministers Conference in October of last year the Moscow government had every opportunity to indicate a desire to resolve the German question, which is the central problem of Europe today, and thus ease tension in that quarter. To solve the German question would be to set off a chain reaction that would lead to peace in Europe if not the whole world. But Soviet Russia would not risk a genuine German election, the key to reunification, knowing full well that it would mean the end of the East German Communist regime and thus the loss of a springboard for the eventual Communist conquest of Western Germany and perhaps even Western Europe.

Disarmament, too, is a question that could be brought within workable limits of negotiation if the Soviets desired to do so. Rather than taking a positive attitude, they have shown marked intransigence in accepting a formula that would insure genuine arms control.

Recent Soviet activity in southern Asia and the Middle East is another instance where Soviet conduct in international affairs is not calculated to inspire trust among nations and peace in the world. On their tour of the subcontinent Premier Bulganin and Nikita Khrushchev, the First Secretary of the Soviet Russian Communist Party, resorted to every distasteful technique, even outright lies, to open up old wounds inflicted long ago by Western colonialism. Easing tensions was not their purpose in condemning the West; it was rather to stir up an already excited Asian nationalism and direct it against the West to their own peculiar advantage.

At the same time Moscow had acted in the most questionable way by pledging arms to Egypt. The Israeli-Arab question is an explosive question which could, if out of hand, spread war and destruction throughout the Middle East. Surely, if Bulganin were sincere in his desire to ease world tensions and insure peace, as he professed to President Eisenhower, he would not have intervened so recklessly in the troublesome Middle East.

Soviet policy in this area exposes the insincerity and duplicity of Bulganin's proposal to the President and points out clearly another reason why its rejection was imperative.

Finally, if the President had chosen even to negotiate with Bulganin within the terms stipulated in the proposed treaty of friendship, the United States would have done irreparable harm to the unity of the Western coalition. In the first place, the pact itself was intended to undermine the unity of the West when it singled out the United States among the Allied Powers as a contracting party. A pall of suspicion would unquestionably descend upon the capitals of Western Europe if the United States—the heart and core of the Western coalition—decided to step outside the framework of the Western defense system and negotiate unilaterally with Moscow. Such an unwise step would have almost required the nations of Western Europe to seek an accommodation with the Soviet Union in which case the Western coalition would have been smashed to shambles.

Clearly the Bulganin proposal could not be otherwise than obnoxious to the United States. So extraordinary is this proposal that no other conclusion can be drawn than that it was nothing more than a propaganda trick. Soviet Russia can, and probably will, throw its vast propaganda machinery into action and hammer this point relentlessly in the countries of the neutralist world. There is no doubt that this pact was drafted with Soviet eyes not upon American leaders in Washington but upon the men of the East.

In many respects the proposed Soviet pact points up the dilemma of America and the Western nations in the conduct of international relations today. In every conceivable manner Soviet Russia has tried to exploit the natural desires of humanity for peace. We want peace more thany any other people on this earth. Democracy thrives upon peace; it abhors war, and engages in it only as a last measure of defense. But we are dealing with a nation whose ideology thrives not upon peace but upon contention and war; for communism is a creature of struggle, oppression, and misery. It seeks to conquer and destroy; and peace is nothing more than a tactical weapon in its array of armaments. Such a dilemma in which we are caught up presents no happy prospect for future generations, but it is one, nonetheless, that we must live with. However, as long as the leaders of our Government never lose hight of the wide and irreconcilable ideological breach that separates the democracy of the United States and the communism of the U. S. S. R., the interests of our Nation will forever be protected. For, it is only upon this knowledge that a wise and enduring policy can be based.

Korea's Fight for Freedom and Independence

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. FEIGHAN. Mr. Speaker, on February 1 I was given the privilege of the floor to speak about the tragic death of Maj. Gen. Kim Chang Young, who was shot down in cold blood on the streets of Seoul, Korea. I came to know General Kim and was very much impressed by his dedication to the cause of human freedom and the preservation of the national independence of the Republic of Korea. That is why I brought to the attention of the Members of Congress the many things that the late General Kim did to support the cause that is as dear as life itself to all Americans.

I received a letter from His Excellency, You Chan Yang, Korean Ambassador to the United States, after he had read in the RECORD my speech of February 1 concerning the late Maj. Gen. Kim Chang Young. The letter of the Ambassador contains a number of observations which I believe the American people will not only understand but for which they will be most grateful.

The letter follows:

KOREAN EMBASSY,
Washington, D. C., February 8, 1956.

The Honorable MICHAEL FEIGHAN,
House of Representatives,
Washington, D. C.

DEAR MR. FEIGHAN: Your eulogy of the tragic death of General Kim Chang Young on the floor of the United States Congress on February 1 is one of the finest tributes paid to anyone. You have made very clear the constant threat and menace of communism in Korea as well as in any other part of the free world.

When I go around in this country to fulfill my speaking engagements, I find, to my great amazement and disappointment, that too many American people are too complacent and think that it cannot happen here, i. e., Communist attack, but slumber with dreams of peace.

The Communists work day and night to conquer and enslave all the free peoples of the world while we of the free world only wake up when the pain gets too great, but men like you and others in the United States Congress who have traveled to these trouble spots in the world due to aggressive communism realize more than anyone the dangers ahead and what will happen to all of us.

I congratulate you from the bottom of my heart on your informative statements regarding our late General Kim and the warning of the constant menace of communism and the sad plight of Korea, the frontier of freedom today.

Sincerely yours,

YOU CHAN YANG,
Korean Ambassador.

Conclusive Case Against United States Supreme Court

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. COLMER. Mr. Speaker, among the many splendid editorials which have appeared in the public press throughout the Nation in recent months on the unfortunate and tragic decision of the United States Supreme Court on the school-segregation matter appeared in the editorial column of the February 19 issue of the Mobile Press Register, Mobile, Ala.

The analysis of this decision is both devastating and true.

I am sure that there are few constitutional lawyers who would find fault with the conclusions reached therein. Moreover, I am confident that there are few laymen familiar with the situation in the South who would deny the assertion that in rendering this political decision the handpicked Court did a monumental disservice to the splendid progress that

was being made in the country, and particularly in the South, in the elevation and advancement of the Negro race. For surely that progress has not only been stymied, but it has suffered a setback that will require many years to overcome.

The editorial follows:

CONCLUSIVE CASE AGAINST UNITED STATES SUPREME COURT

The case against the United States Supreme Court of today in its ill-founded, injudicial decision on school segregation is clear, complete, and conclusive.

This decision, a concoction of psychology, sociology, and politics, flouts at precedent after precedent established by able judicial minds. It astonishingly invades the Federal legislative prerogative. The Court puts itself so up a tree that it tries to save face by licensing an indefinite continuation of the constitutional violation it says exists in racially segregated public schools.

Never before in American judicial history has the highest court in the land bungled its way into the embarrassment which this tribunal as now constituted has brought upon itself.

On this court sit the Roosevelt-made Justice Black of Alabama, the Eisenhower-appointed Chief Justice Warren of California and other justices whose political backgrounds are well etched but not their reputations for judicial acumen.

What a disappointment—what a misfortune—has come to the United States when the Federal Supreme Court usurps a power it does not have to amend the Federal Constitution and then seeks to extricate itself by presuming for itself the authority to license, for an unspecified period, the very violation of the Constitution it charges is being committed.

Since when, from whom, and from what source did the United States Supreme Court of Chief Justice Warren, Justice Black, et al., inherit an incongruous double-pointed power never before assumed by the Court—namely, the power first to so amend the traditionally recognized and accepted law of the land as to charge a violation of it, and then to expressly give permission for this alleged violation to be carried on indefinitely?

Something new and disturbing is witnessed when the highest Court in the Nation holds that any division of Government operating segregated schools is violating the United States Constitution in a manner historically subject to punishment for contempt if the violation persists, but shows itself to be so uncertain of the tenability of its decision that it retreats to the point of saying the alleged violation may be kept up, subject only to the understanding that ultimately it should cease.

This is the incredible, amazing, and astounding position of the present-day United States Supreme Court.

It is nothing less than a distressing national misfortune when the highest Court in the land so departs from its own prescribed field of function as to maneuver itself into the position of the present-day United States Supreme Court.

The blunder of this Court is colossal in the disservice and damage done by it. The prestige of the Court, which should so function as to maintain the greatest respect for it and the fullest confidence in it, has suffered in a way that is incurable so long as the present makeup of the Court sits on the bench.

The vacillation of the United States Supreme Court of today almost to the point of open contradiction in its action on the school-segregation issue is, to us, equivalent to a confession by the Court of its blunder in overruling all manner of earlier United States Supreme Court decisions to declare segregation unconstitutional.

What has happened is more than a national misfortune. It is a national disaster, a national catastrophe.

Reclamation Projects Do Not Increase Surpluses

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. MOSS. Mr. Speaker, in recent months there have been many specious arguments advanced by the opponents of western reclamation against bringing farmlands into production in a so-called period of food surpluses.

The corporals of disaster who view with alarm any increase in reclamation acreage might with great profit read an editorial entitled "Reclamation Projects Do Not Increase Surpluses," which appeared in a recent issue of the Sacramento (California) Bee. The editorial in question reads:

RECLAMATION PROJECTS DO NOT INCREASE SURPLUSES

One of the cries raised by opponents of western reclamation projects is the question: Why construct these projects to bring more farmlands into production when the Nation already is burdened by staggering agricultural surpluses?

The question becomes apocryphal in the light of a survey recently made by the Federal Reclamation Bureau at the request of Senator ARTHUR V. WATKINS, of Utah.

The answer is that crops grown on lands irrigated by the Federal projects have a negligible effect upon the farm surpluses and the Government's price-support program.

As of September 30, 1955, nearly nine-tenths of the Government's investment in price supported commodities was in wheat, upland cotton, corn, tobacco, and rice.

The reclamation projects produce none of the tobacco, less than 2 percent of the national yield of wheat, one-third of 1 percent of the corn, less than 1 percent of the rice and about 6½ percent of the upland cotton. And, of this, only from 5 to 50 percent of the production has been under price support.

Commissioner of Reclamation W. A. Dexheimer points out the great bulk of the agricultural yield on reclamation lands consists of fruit, nuts, vegetables, and seed crops, which are not in surplus, and forage which gives a stable spring feed supply for livestock on the West's 700 million acres of rangeland.

The opposition to reclamation projects obviously is phony and is raised either out of ignorance of the facts or as a coverup for antagonism to the low cost public power features of the developments.

As a matter of fact, agricultural land is being retired from production by urban and industrial expansion 10 times as fast as irrigation dams are making new lands available for tillage.

Agricultural experts estimate the increase in population will eliminate the Nation's food surplus within 3 to 5 years, or as soon as an irrigation project begun today could be completed.

Beyond that time, these experts figure, the Nation will face a food deficit unless steps are taken at once to bring the potentially irrigable land of the West into production. But this threat is not apt to faze those special interests which profess to see the great reclamation projects only as creeping socialism.

Statement on International Trade

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. WILLIAMS of New Jersey. Mr. Speaker, I wish to call the attention of my colleagues to a particularly important statement made by the AFL–CIO executive council in Miami on the question of international trade. The continued solid support of the labor movement for the vital trade agreements program is of first importance. They urge the establishment of the Organization for Trade Cooperation, a matter which will soon be before the Congress.

May I also point out that the newly merged labor organization urges legislation to assist workers, enterprises, and communities which are adversely affected by adjustments in trade legislation. This is directly in line with the purposes of H. R. 229, the trade adjustment bill, of which I am the sponsor. It is my hope that the Congress will give attention to this critical problem soon.

The statement follows:

STATEMENT ON INTERNATIONAL TRADE BY THE EXECUTIVE COUNCIL, AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS, MIAMI, FLA., FEBRUARY 7, 1956

Expansion of international commerce and the lessening of barriers to international trade must be key objectives in this country's total foreign policy. Economic development—in many instances, the economic survival—of many countries throughout the world is dependent upon the ability to buy American goods and products. Many American industries are dependent to a substantial extent upon the exports of their products.

On the other hand, many basic commodities needed to continue production in key American industries are available only in overseas countries. Certain foodstuffs used daily by American families must be imported.

There is a great interdependence among nations of the world. Many nations actually depend upon trade as their vital bloodstream. It is in the interest of the free world to keep this vital bloodstream flowing.

If the United States does not foster mutually advantageous trade relations with the other free nations, there is a real danger that the Soviet bloc will step into the breach. If the United States is interested in preserving a free world, in building strong and effective economies in these countries, in preventing the spread of communism and totalitarianism, in maintaining markets for many of our products, in preserving a steady flow of raw materials and foodstuffs into this country, then we must actively support and participate in the extension of multilateral trade among the free nations of the world.

Such a program was started in the middle thirties when the reciprocal trade agreements program was enacted. The American Federation of Labor and the Congress of Industrial Organizations have consistently supported the reciprocal trade agreements program from its inception. It has been extended

periodically, with modifications, ever since. At first, the United States negotiated bilateral agreements which incorporated the most-favored-nation clause. The program of reciprocal trade, which includes the escape clause and the peril-point procedure, was designed to promote exports and imports without causing serious injury to American industries. Beginning in 1947, multilateral trade agreements were negotiated. There are now some thirty-odd countries that are parties in one way or another to these negotiations.

The next vital step is to tie these nations together in an administrative organization to coordinate their work between negotiating sessions, as well as to facilitate their periodic negotiations. To accomplish this objective, a charter for the establishment of an Organization for Trade Cooperation (OTC) has been drafted. President Eisenhower has submitted this to Congress for approval. We wholeheartedly endorse this proposal and urge that the Congress not delay its approval. The establishment of OTC will not affect trade policy, decisions, or concessions in any way. It is purely an administrative body.

On the policy side, there are many questions. As long as the reciprocal trade agreements program is carried out without doing serious injury to American industry, it will have the wholehearted endorsement and support of the AFL-CIO. Serious injury, in the main, can be avoided by the continuation of the present procedure for peril-point findings which precede all multilateral negotiations. The peril-point concept goes a long way toward implementing the basic tenet that trade concessions shall be granted without doing serious injury to American industries.

Every trade agreement, as the result of a legislative mandate, contains an escape clause that permits the affected industry to appeal to the United States Tariff Commission and the President for relief from serious injury or the threat of serious injury resulting from tariff concessions. This provision should be continued.

Many times the industries affected by increased imports are located in communities dependent upon one industry. Such communities are hit quite hard and become distressed areas. Legislation should be enacted to assist these communities by aiding the workers, industrial enterprises, and communities to adjust to the situation.

In addition, injury that might result from tariff concessions can be minimized by improving labor standards of workers abroad. During the multilateral trade negotiations, no tariff concession, for example, should be granted on products made under labor standards that are considered substandard in the exporting country. Failure to establish and maintain at least minimum labor standards in the exporting country should be considered valid cause for withdrawing United States tariff concessions.

American labor will continue to work with the ILO and the ICFTU, so that national labor centers in countries throughout the free world will be better able to attain living standards that enable their countries to compete more equitably on the world market.

With the improvement of worldwide living standards, the development of an adjustment program in the United States, the continuation of an effective administration of the escape clause and the peril-point procedures, and the approval of the OTC by Congress, we in the AFL–CIO are confident that the free world will be aided by the continued, but necessarily gradual reduction of trade barriers and the expansion of international trade and commerce.

Inconsistency, Thou Art a Jewel—We Are Helping Russia To Build Armaments, Believe It or Not

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an article by that outstanding political writer, Mr. David Lawrence, which recently appeared in the Evening Star. Mr. Lawrence points out the inconsistency of our concessions to our allies for the release of strategic material which is surely helping to rearm the Communist world:

HELPING RUSSIA TO BUILD ARMAMENT—CONCESSIONS MADE BY UNITED STATES TO ALLIES FOR RELEASE OF STRATEGIC MATERIALS

(By David Lawrence)

Sometimes the most sensational news is overlooked in the hurry of modern news gathering and maybe it's because the subjects themselves are not easily grasped.

Thus a $2,500 contribution to a campaign fund makes headlines because it is easily understood or is announced under dramtic circumstances. But one would think that the revelation of a scandal in which the allies of the United States obtain American money and then proceed to help to arm and industrialize Soviet Russia might also get full coverage in the press. But it received scant mention.

On Thursday of last week, Senator JOHN L. MCCLELLAN, chairman of the Senate Subcommittee on Permanent Investigations, made a sensational speech on the floor of the Senate which was recorded verbatim in the CONGRESSION RECORD. He spoke of the most asounding secret concessions made by our Government in a conference with its allies. He gave instance after instance of strategic materials released which will help the Soviet Union to build an armament machine that some day can be used to kill American soldiers and to devaste American cities.

Senator RICHARD RUSSELL, of Georgia, Democrat, chairman of the all-important Armed Services Committee of the Senate, rose afterward to characterize it a most startling state of affairs. Three other members of the Armed Services Committee joined to deplore a scandal that shocked them. It was disclosed that Defense Department experts had protested in vain.

Senator MCCLELLAN reported to the Senate this his investigating committee had conducted hearings to try to find out how and to what extent the United States Government had agreed to allow its allies to arm Soviet Russia. After reading the Arkansas Senator's speech, one wonders whether the American Government in refusing to let Israel have arms or in letting tanks go to Saudi Arabia isn't straining at a gnat in the Middle East while swallowing a camel in central Europe.

For Senator MCCLELLAN said that in August 1954, at a secret meeting of the United States and its allies, 200 of the 450 items previously under embargo to the Soviet Union were released. The Soviets know what the items are because they are buying them, but to this day the executive branch of the Government here refuses to disclose to Congress just what the items are that have been released though they have been published in technical periodicals abroad and in an official journal of the British Government's Trade Bureau.

Here are four conspicuous examples of the 200 articles released to the Russians:

1. Boring mills essential to the manufacture of tanks, artillery, aircraft, and for atomic reactors used in submarines.

2. Vertical boring mills essential to the manufacture of jet engines.

3. Dynamic balance machines used for balancing shafts on engines for jet airplanes and guided missiles.

4. External cylindrical grinding machines which a Defense Department expert testified are essential in making engine parts, guided missiles, and radar.

"It was emphatically stated," says the Arkansas Senator in describing the testimony of a Defense Department expert on machine tools, "that it would be better to permit shells, guns, or guided missiles to be disembargoed and sent to the Soviet Union, for they could be used against us only once while these machine tools will be used to make armaments of war which could be used against us many times."

Mr. MCCLELLAN said that the testimony showed, moreover, how metals and minerals—which were being stockpiled in the United States because they are essential—were now removed from the embargoed list of strategic materials. While America was forced to divert 143 million pounds of copper from its stockpile to help industry here, our allies have shipped since August 1954 about 250 million pounds to the Soviet Union and everybody who knows anything about strategic materials knows what a vital material copper is in armaments of all kinds.

Senator MCCLELLAN and other Senators served notice in the same debate that they wouldn't vote for the $4.9 billion asked by the administration for aid to our allies unless the whole matter was satisfactorily cleared up. Mr. MCCLELLAN said to the Senate:

"If we are providing these funds to our allies for the purpose of helping them to develop their military power and strength as a defense against communism, then how inconsistent is it for the same allies, for the sake of trade and profit, to place in the hands of the Communist bloc the machines, materials, and other essentials of the war potential in a war effort? Is not the advantage we are trying to gain and for which we are trying to provide being offset by the making of such machines, tools, and materials available to a potential enemy?"

Also in the offing is a demand in allied circles abroad that the list of articles now permitted for export to Soviet Russia should be released as well to Red China though there is still a state of war between the United Nations and the government of that country due to the unfinished business in Korea.

Plainly the administration is in for trouble in the Senate on the whole foreign-aid program because of what has been done secretly and injudiciously to satisfy allied pressure for more trade with the enemy.

The Communists Are Anti-Semitic

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. FEIGHAN. Mr. Speaker, Members of Congress have long known the

destructive force of communism and the efforts of the Kremlin to create a Soviet man who will be completely responsive to the will of his Russian masters. We also know that the Communists will stop at nothing to attain their evil goals. They have even destroyed entire nations of people such as the Crimea Tatars, the Chechen-Inguish, and the Kalmuks. But I thought Members of Congress would be interested in a current piece of intelligence concerning a new crime of genocide being carried out by the Communists. A recent Associated Press dispatch from Baltimore quoting a well-known Israeli journalist and labor leader to the effect that the Jews in Russia will be exterminated within the next 15 years should be of special interest to all, and under leave previously granted, I include it with my remarks, as follows:

SOVIETS SEEN ANTI-SEMITIC

BALTIMORE.—An Israeli journalist and labor leader says he has found strong evidence of a Russian governmental policy of obliterating the Jewish people of Russia.

Chaim Shurer, editor of Israel's largest daily newspaper, Davar, said in a speech he reached this conclusion last year while studying Jewish life during travels in the U. S. S. R.

"Russian Jews will cease to exist in 10 or 15 years unless the trend is changed inside the Soviet," he said.

The Howard A. Hanson Dam

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. TOLLEFSON. Mr. Speaker, I would like to call to the attention of my colleagues an editorial which appeared in the Seattle Times. All who live in the western King County area know of the contribution of Colonel Hanson to the construction of this flood-control project and feel it only fitting that the dam should bear his name.

The editorial follows:

NOTHING COULD BE MORE APPROPRIATE

In a resolution introduced by this State's Representative Pelly, Congress is asked to name the flood-control dam to be constructed at Eagle Gorge in honor of Col. Howard A. Hanson, Seattle attorney. It would, in fact, be impossible to think of a more appropriate designation for this improvement, for Colonel Hanson for more than a quarter of a century headed every phase of this area's protracted effort for a flood-control program for the Green-Duwamish River Valley.

Colonel Hanson assumed leadership of this fight in the late 1920's as the chairman of a Seattle Chamber of Commerce rivers and harbors subcommittee and continued to head the effort as support was widened to include all the principal communities of western King County. Dozens of others worked with him, including members of the State's congressional delegations and of the State legislature, district engineers of the Army Corps of Engineers, county and city officials, members of the Seattle Chamber of Commerce, and its staff, and a host of others.

It was Colonel Hanson, however, who was always on hand to carry the ball. Few efforts of this type have enjoyed, from first to last, the sustained leadership of a single devoted individual.

The naming of the Eagle Gorge Dam to honor Colonel Hanson thus is a natural. Representative PELLY'S resolution will have the support of all the communities and organizations that are interested in flood control for the Green-Duwamish Valley and the future agricultural and industrial development of that area.

John P. Holland—Floating an Undersea Venture

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New Jersey Business, February 1956:

YESTERYEAR IN NEW JERSEY

(By William Casperson)

JOHN P. HOLLAND—FLOATING AN UNDERSEA VENTURE

The history of the submarine is replete with romance. The idea of navigating a vessel under water caught the fancy of men with inventive imaginations as far back in history as 322 B. C., when Aristotle advised the diver to provide himself with an inverted kettle to keep out the water and provide a supply of air for breathing.

One of the earliest references to a submarine is in the Wonderful Power and Art of Nature by Roger Bacon in 1557.

The oldest submarine of history of which a drawing exists is described by Borelli in 1680. Propulsion was by a flexible oar which worked like the tail of a fish. Submergence was by changing the volume of water in sacks within the boat.

Other inventors of undersea craft were David Bushnell who built the *Tortoise* in 1775; Robert Fulton with his *Nautilus* in 1800; Wilhelm Bauer with the *Brandtauscher* in 1859; and Theodore Stormy who built the Confederate submarine *David* in 1864. Another Confederate submarine, *Hundley*, blew up the United States boat *Housatonic* February 17, 1864.

All submarine boats up to this time were propelled by manpower and thus were not practical. With the advent of electric power and the gasoline internal-combustion engine, a new chapter opened in submarine history.

This chapter was introduced by John P. Holland, of New Jersey, who designed and launched the first submarine having the necessary elements of success, the prototype of all modern submarines.

In 1954 the Paterson Museum acquired about 500 original letters, papers, sketches, and blueprints of Holland's. In these, Holland gives some account of his work and experiences, some of them amusing, and some carrying the pathetic story of the inventor deprived of his legitimate rights.

WAR DETERRENT

An interesting sidelight on submarine history is revealed in Holland's statement that adoption of the submarine would have a deterrent effect on war. He lived to see the submarine come to maturity, but he did not live to witness its destructive role in warfare.

Undoubtedly the most fanciful concept of underwater transportation was that given by Jules Verne in his fictional version of the *Nautilus* in Twenty Thousand Leagues Under the Sea, written in 1869. It was while John P. Holland was reading this book to a brother in the Christian Brothers School in Ireland that he became interested in submarine construction.

Holland was born in Liscanor, County Clare, Ireland, February 24, 1842. He entered the United States in 1872 and came to Paterson, N. J., in 1873, where he taught in St. John's Parochial School until 1879, when he moved to Newark. He died on August 12, 1914.

While teaching in Paterson, Holland originated a plan for a submarine and drew up specifications which he submitted for acceptance in 1875, to the United States Navy.

His specifications were rejected by the Navy in a letter signed by E. Simpson, captain inspector of ordnance, in charge of station at Newport, R. I., dated February 25, 1875.

The reason given for the rejection was, principally, because there were so many gadgets to attend to, that even if the boat were successful, no man could handle them all.

The rejection did not discourage Holland. He writes in one of his personal papers, "I held a good deal back, and described something I didn't want to do as I believed they would have no regard to my desire for secrecy." He further comments: "I was right in this point for Commander Barber published the drawings and an abstract of the specifications."

Holland's papers say that the boat described in these specifications was never built but that a larger one was built and equipped with a petroleum engine, which proved a failure, but that "the experiments were not prevented."

AN EXPERIMENT

What happened was that he secured a steam launch owned by William Dunkerly of Paterson, and Dunkerly towed the submarine up and down the Passaic River with Holland in it. In this way, the inventor was able to determine by experience what was required to make it successful. He states that the longest time he remained submerged in the boat was 1 hour.

This was his first submarine. The boat, as he referred to it, was built at the Albany Street Iron Works at the corner of Albany and Washington Streets in New York City, during the year 1876–77. It was brought unfinished to Paterson and completed in the Todd & Rafferty shops. The boat measures 14 feet 6 inches in length, 3 feet in width and 2 feet 6 inches in depth. It weighs approximately 1,400 pounds. It is constructed of riveted sheet iron plates. It was completed and tested in the Passiac River at Paterson in May, 1878.

Holland's idea of a submarine submerging was that it should descend and ascend in water as a prorpoise dives and rises, with the keel of the boat at an angle parallel to the desired angle of travel down and up in the dive and ascent.

In order accomplish this operation he placed in this first boat a shaft running transverse to the longitudinal axis of the boat, from side to side at the center of gravity. The shaft extended out on either side past the hull. On each end he fastened a flat plate to act as a rudder in lowering and raising the boat in water.

NO RESPONSE

He found the boat would not respond to the action of these rudders. He then adopted the principle of water ballast within compartments of the boat, designed and operated to increase and decrease the specific gravity of either end of the boat as desired. Holland strongly opposed the principle of having water ballast operate full lengthwise of the boat, a feature which later caused submarine disasters.

In furnishing the inventor with calculations required for successful navigation of an underwater craft this No. 1 submarine proved to be of inestimable value. It must be given its rightful place in submarine history. It is now on exhibition in the Paterson museum.

With calculations based on actual experience completed, Holland began the construction of his second boat on May 3, 1879 This is known as the *Fenian Ram*, and it is now mounted in Westside Park, the property of the city of Paterson. The *Fenian Ram* received its name from the newspapers because financing of the boat was done by the Fenian Society.

In his notes on *Fenian Ram*, Holland says: "There is scarcely anything required of a good submarine boat that this one did not do well enough, or fairly well."

The *Fenian Ram* was launched in April 1881. Tests were begun in June of that year. It was equipped with two 15-horsepower internal combustion engines. It marked the first successful use of an internal combustion engine in a submarine.

STOLEN SUB

The inventor was not able to complete all his tests with the *Fenian Ram*. It was stolen by creditors of one of Holland's financial helpers and hidden. It came to light many years later and was purchased by E. A. Browne and presented to the city of Paterson.

With the success of the *Fenian Ram* and public interest in submarines growing, Holland succeeded in attracting capital. A company was formed which absorbed the J. P. Holland Boat Co., under which Holland had been operating. The new company became the Electric Boat Co., which is today a division of General Dynamics Corp.

Under contract with the United States Navy, Holland and his associates built the *Holland*—the first submarine purchased and commissioned by the United States Government. It was constructed in 1898. After 2 years of rigid testing, it was purchased by the Navy and commissioned in 1900. The *Holland* was propelled on the surface by a gasoline engine, and by electricity furnished by batterys when submerged. The Electric Boat Co. subsequently built a large number of submarines for the United States Navy.

The third chapter in submarine development opened with the construction and commissioning of the Navy's atomic submarine, *Nautilus*. What the future holds in this new chapter in submarine history is an unfinished story.

Hill Report Does Not Claim California Will Receive Less Water Than Due Under Compact

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 29, 1956

Mr. ENGLE. Mr. Speaker, during the debate on the upper Colorado River project yesterday and today, reference has been made to a report entitled "Report on Water Supply for Probable Future Developments in the San Diego County Water Authority" by a board of engineers comprising Raymond A. Hill, John S. Longwell, and Carl R. Rankin. This report is cited as the basis for the claim that southern California's water rights will be jeopardized by the upper Colorado basin project.

This report does not assert that southern California will lose water to which it is entitled under the compact. It says exactly the opposite because the report is based on compliance with the compact. It does say that there may be less water than was originally thought, and therefore not enough to go around.

It must be remembered that California, under its own limitation act, is entitled to 4.4 million acre-feet, plus half of any surplus; but if the water in the river is short there may be no surplus to divide. That is exactly what Mr. Hill and his associates are saying. In other words, under conditions of maximum use in the upper basin, plus short water-years, there may be no surplus, and therefore no surplus to divide. But, this is no fault of the upper basin in the exercise of its rights to take the water to which it is entitled. And California cannot complain that the amount of water available in the river does not meet its expectations, provided that the water which is in the river is divided according to the terms of the compact—which is presupposed in the report of Mr. Hill, as well as in the legislation before us.

Moreover, the conditions of maximum use in the upper basin which Mr. Hill and his associates use as the basis for their conclusions do not apply under the bill which is now before us. That is true because the maximum amount of water which the upper basin will use in the projects under this bill amount to less than 2 million acre-feet. The water already in use in the upper basin is less than 2½ million acre-feet. Therefore, the total uses when this project is in full operation 28 years hence will be less than 4½ million acre-feet—which is 3 million acre-feet less than the total amount to which the upper basin is entitled under the terms of the compact. Consequently, there is at least 3 million acre-feet of slack available before the conditions of maximum use on which Mr. Hill and his associates predicate their prophesies of short water.

For those who are interested in checking the matter through the Hill report, I would like to call their attention to the following quotations from that report.

The Hill report is based on the construction and operation of the Colorado River storage project in compliance with the Colorado River compact. I quote as follows from page 12:

> The Colorado River compact, among other things, provides that "the States of the upper division will not cause the flow of the river at Lee Ferry to be depleted below an aggregate of 75 million acre-feet for any period of 10 consecutive years, reckoned in continuing progressive series beginning with the first day of October next succeeding ratification of this contract."
>
> It now appears, however, there is a possibility that the releases past Lee Ferry may be increased by an amount equal to the following items:

	Acre-feet per annum
One-half of required treaty delivery to Mexico (½ × 1,500,000)	750,000
One-half of estimated operating wastes past the international boundary (½ × 200,000)	100,000
Total	850,000

> If such an increase is agreed upon, the average annual flow passing Lee Ferry after construction of the upper Colorado River storage project and related works would become 7,500,000 + 850,000 = 8,350,000 acre-feet per annum. This may be taken as the probable maximum future flow past Lee Ferry.

I would like to point out, on the basis of the above language, that the study by this board of engineers is based on releases at Lee Ferry of not only an average of 7½ million acre-feet per year, or 75 million in each consecutive 10 years, but releases of an additional 850,000 acre-feet, making the total releases at Lee Ferry available to the lower basin amount to 8,350,000 acre-feet per year. The study goes on to show that with depletions of 6 million acre-feet between Lee Ferry and the international boundary—the 6 million acre-feet being the depletion for the year 1953–54 of the maximum of record—plus 1,500,000 acre-feet for Mexico, plus 200,000 acre-feet to meet half the operating waste past the international boundary, it will still be possible to increase diversions between Lee Ferry and the international boundary by 650,000 acre-feet. I want to emphasize that this increase is above the highest year of record, and I quote from the report:

> The data presented in table 4 and in the previous paragraphs clearly shows that when the upper Colorado River storage project is constructed and the flows at Lee Ferry are regulated to comply with the Colorado River compact, with possible additions as referred to in table 4, compliance with the Mexican Treaty and with allowance for reasonable waste past the international boundary which, from a practical operating standpoint, cannot be avoided, it will be possible to divert only 650,000 acre-feet per annum from the river between Lee Ferry and the international boundary in addition to that actually used during 1953–54.

Now to go just briefly to the quotations which have been made from this report with respect to California's water rights being threatened. The metropolitan water district has no right to 1,212,000 acre-feet of water from the Colorado River. Even the report refers to this as a "claimed right," as indicated by the following from page 14 of the report:

> Plate B shows that very little surplus water from the Colorado River Aqueduct of the metropolitan water district will be available to the authority under the assumed condition providing the diversion from the Colorado of the metropolitan water district claimed right of 1,212,000 acre-feet per annum.

The claim of the San Diego County Water Authority to 112,000 acre-feet is based upon the metropolitan water district's claim to 1,212,000 acre-feet—so that if the metropolitan water district's right under the compact is only half the amount claimed then, of course, the amount for the San Diego County Water Authority would be also cut in half, and this is just the conclusion reached by this board of engineers.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

SENATORS WITH RESIDENCES IN WASHINGTON

OFFICE ADDRESS: Senate Office Building, Washington, D. C.

[Streets northwest unless otherwise stated]

Vice President, Richard Nixon

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Anderson, Eastland, Clements, Humphrey, Scott, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, Kilgore, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Johnson of Texas, Barkley, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Morse, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Thurmond, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Scott, Bible, Neuberger, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Thurmond, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Kilgore (chairman), Eastland, Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Neely, Pastore, Monroney, Hennings, Scott, Neuberger, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, Symington, Thurmond, McNamara, Neuberger, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Minton, of Indiana, the Methodist Building.
Mr. Justice Harlan, of New York, 1677 31st St.

OFFICERS OF THE SUPREME COURT

Clerk—Harold B. Willey, 3214 N. Wakefield St., Arlington, Va.
Deputy Clerk—Reginald C. Dilli, 1329 Hemlock St.
Deputy Clerk—Hugh W. Barr, 4701 Connecticut Ave.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, New Hampshire, Massachusetts, Rhode Island, Puerto Rico.

Second judicial circuit: Mr. Justice Harlan. Vermont, Connecticut, New York.

Third judicial circuit: Mr. Justice Burton, Pennsylvania, New Jersey, Delaware, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, Virginia, West Virginia, North Carolina, South Carolina.

Fifth judicial circuit: Mr. Justice Black. Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Canal Zone.

Sixth judicial circuit: Mr. Justice Reed. Ohio, Michigan, Kentucky, Tennessee.

Seventh judicial circuit: Mr. Justice Minton. Indiana, Illinois, Wisconsin.

Eighth judicial circuit: Mr. Justice Clark. Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Arkansas.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.
